उज्जर, सबुज, नीला वर्णकरके शोभित, हीराके समान प्रभाविशिष्ट रत्नको गन्धर्व्व या तुरमुरि कहते हैं। थोड़े लाल रङ्गदार रत्नको शिखरि और थोड़ा सुर्खी मायेल नीलवर्ण रत्नको नीलाङ्ग कहते हैं। ९।

इति उपरत्नका बयान।

Translation.

9. A *Gandharva* (Tourmaline) is white, green, or blue, and bright like lightning A reddish or pale-red gem goes by the name of *Sikhari* (Cinnamon-stone); and a deep blue gem, dashed with red, by the name of *Nílánga* (Violet-ruby)

অনুবাদ।

শ্বেত, হরিৎ ও নীল বর্ণে বিভূষিত, বজ্রের ন্যায় অতি দীপ্তিশালী রত্নকে গন্ধর্ব্ব বলে। ঈষৎ রক্তবর্ণ অর্থাৎ পাটলবর্ণ রত্ন শিখরি নামে এবং ঈষৎ রক্তের আভাযুক্ত গাঢ় নীলবর্ণ রত্ন নীলাঙ্গ নামে বিখ্যাত হয়। ৯।

ইতি উপরত্ন।

MINOR GEMS.

THE AQUAMARINE.

Its Properties.

THE Aquamarine is a variety of the Beryl; the green and blue specimens being called by the former designation; the yellow ones, by the latter. The former again has three sub-divisions: (1) Aquamarine,—pure, light, sky-blue; (2) Siberian Aquamarine,—light greenish-blue, bright lustre and faintly colored; (3) Aquamarine Chrysolite,—greenish-yellow, sometimes yellowish-green, with bright lustre. A pale-greenish variety, called the Oriental Aquamarine, is distinguished from the ordinary kind by its superior brilliancy, hardness, and specific gravity.

Where Found.

THIS stone was formerly obtained from the frontiers of China; but now it comes mostly from Brazil, ready cut, as also from certain places in Siberia, in the Ural and Altai mountains.

Engravings, &c.

THE Aqamarine has found favor with the English on account of its virtue of retaining its brilliance

in artificial light. It is now used in a variety of ornaments. An Aquamarine, having the figure of Hercules engraved on it, was in the possession of Emperor Commodus. One, representing Neptune, drawn by sea-horses, was found in the treasures of Odeschalchi. Pliny mentioned Beryl as "the gem green as the sea," and hence, perhaps, its other name "Aquamarine." Beads of Aquamarine have been discovered in the Egyptian mummy-pits. More than 2,000 years ago, this stone was used by the Greeks for Intaglios. In the National Library of Paris is to be seen an Aquamarine upon which is engraved the head of Julia, the daughter of Titus. The tiara of Pope Julius II contained an *Aquamarine* $2\frac{1}{16}$ *inches in length and* $2\frac{2}{3}$ *in thickness.*

THE CHRYSOPRASE.

Its Properties.

THE Chrysoprase is a variety of the Quartz and is composed of Silica 96·16, Oxide of Nickel 1·00, and lime 0 83. It loses its color by the action of heat and light, and also of time. The solution of Nitrate of Nickel is said to have the power of restoring its original color. It has a flat conchoidal fracture.

Where Found

THE Chrysoprase is found in Silesia, near Kosemutz, Glasendorf, and Baumgarten, near Frankenstein It is also reported to have been discovered in St. Lawrence, United States.

even brooches and pins. The Mosaic walls of St. Wenzel's Chapel at Prague, (built in the 14th century,) contain good specimens of Chrysoprase. Frederic the Great used this stone profusely in adorning Sans Souci. In the Potsdam Palace are two tables made of this gem, 3 feet long, 2 broad, and 2 inches in thickness.

THE ONYX.

Its Properties.

THE Onyx is a Chalcedonic variety of the Quartz, and is distinguished from the Agate by the position of the stripes or layers. It is generally of a blackish or brownish color with white stripes, and sometimes with a greenish layer.

Where Found.

THE Oriental Onyx, which is better than the ordinary one, is obtained from India, Egypt, Arabia, Armenia and Babylon. The other kind is found in Saxony, the Isle of Skye, and in several parts of Russia and Ireland.

Cutting, Staining and Engraving.

THE cutting, slitting, drilling and staining of Onyxes, are conducted, on a large scale, at

Oberstein and Idar The mills being driven by the water power of the River Aar, and labor being very cheap, the operation is performed at a very small cost The Onyx can very easily be stained to any artificial color If it is intended to color it black, the stone should be first boiled in honey, oil or sugared water, and then in a solution of Sulphuric Acid, which carbonizes the oil or sugar which the stone has taken into itself If red, Protosulphate of Iron is added to it If deep blue, yellow Prussiate of Potash is added to this again Sardonyx is a variety of the Onyx and is formed out of the Sard and Onyx It is of a reddish brown color and consists of alternate layers of Chalcedony and Carnelion The nicolo or onicolo, which has a deep brown ground overlaid by a layer of bluish white, is also a variety of the Onyx The Onyx has been used for Cameos from the earliest times One of the ancient specimens is the Mantuan vase, on which are represented Ceres and Triptolemus in quest of Proserpine A Cameo representing Octavius Augustus, is to be found in the Vatican Library, Rome Amongst the many specimens seen in the Museo Nationale, Naples, may be mentioned, one representing the apotheosis of Augustus, and another having the head of Medusa on the obverse, and the apotheosis of Ptolemy on the reverse In the National Library of Paris are to be seen one having upon it Tiberius with an ox, another Marcus Aurelius and Faustina, a third, Aggripina,

with her two children; and a fourth, Jove armed with the lightning. A bust of Faustina, cut on a Sardonyx, belonging to the Marquis Drec, was sold for 7,171 francs. The art had, for a long time, degenerated, but seems to have revived, as the beautiful specimens produced at Paris and Rome unquestionably prove.

The Onyx as known to the Ancients.

The Onyx is often spoken of in the Greek and old Hebrew works. The name comes from a Greek word which means "a nail," the stone being supposed to resemble the color of the human finger-nail. The Greeks attach to it the following mythological story:—"Cupid, with the sharp point of his arrow, cut the nails of the sleeping Venus, which fell into the Indus; but as they were of heavenly origin they sank and became metamorphosed into Onyx." The Onyx was, according to the authorized version of the Bible, the eleventh stone on the breast-plate of Aaron. The valuable ring, thrown into the Sea by Polycrates, the tyrant of Samos, is supposed to have been a Sardonyx.

Its Price and Uses.

The Onyx and Sardonyx are extensively used for jewelry purposes, particularly for signet-rings. They are also used for being made into cups, vases, knife and sword-handles, and in beads for necklaces

and rosaries "Mithridates, King of Pontus, had," according to Appianus, "2,000 cups of this gem" The Basilica of St Peter, Rome, has 6 small pillars made of Onyx In the Temple of the Three Magi, Cologne, is one pillar, which is broader than the palm of the hand The Oriental Onyx fetches far higher value than the German one But the latter can, by staining, be so perfectly made to imitate the former, that it can very easily pass off for it, even with the most experienced The German beads sell from 6*d* to 6*s*, according to size and quality Large stones of good color have been known to fetch so much as £200 each A necklace of well selected stones may be sold for 100 to 500 guineas

---

Marvellous and Medicinal Properties

In the ancient times, the Onyx was supposed to cause strife and melancholy and to be a remedy for epilepsy

---

THE BLOOD-STONE.

Its Properties

THE Blood stone or Heliotrope is a Jasper variety of Quartz, and is possessed of a dark green color, and has minute blood red specks spread over it It is opaque and its cleavage

is imperfect; its fracture, sub-conchoidal and uneven; its hardness, 4·5. It is infusible and changes its color, if melted with borax and subjected to intense heat.

Where Found.

The Blood-stone is found in large quantities in India, Bokhara, Siberia and Tartary, and also in the Isle of Rum, (in the Hebrides). It is also found in Bohemia, France, Spain and parts of Germany.

Engravings and its Uses.

It is said that the art of engraving was first tried on the Blood-stone. The largest numbers of the old Babylonish and Egyptian Intaglios are on the Blood-stone. The Blood-stone is now used for the same purposes as the Agate and Onyx.

The Blood-stone as known to the Ancients.

The word Heliotrope is derived from two Greek words, signifying the "sun" and "a turning"—from a notion that when steeped into water, it had the power of changing the image of the sun into blood-red. Pliny says, that the sun and the solar eclipses could be viewed in it, as in a mirror. According to a tradition, the Blood-stone had its origin in a dark-green Jasper, over which fell the blood of Christ (at the Crucifixion), and which

happened to lie at the foot of the Cross. The red specks in this stone were, in the Middle Ages, supposed to represent the blood of Christ. The Blood-stone was thought to strengthen the stomach, if hung about the neck.

THE JADE.

Its Properties.

THE Jade is a very hard and tough stone. Its color varies from a creamy white to a dark green. Its hardness is 6 to 7 in the scale; its specific gravity, from 2·9 to 3·1. It fuses before the blow-pipe at the thinnest edges only, with great difficulty. It is composed of a variety of things, *viz.*, silica, magnesia, lime, alumina, peroxide of iron and of manganese, oxide of chrome, water and potash.

Where Found.

THE Jade, also called the Nephrite, is found in Egypt, Corsica, North America, New Zealand and China.

Its Price and Uses.

IN India, China and Turkey, the Jade is carved into dagger and sword-handles, ornamental vases, cups, &c., and generally studded with precious

stones. The color best liked is the pale, greenish-grey, good specimens of which often fetch a high price. Japan sends out to Europe a large quantity of ornamental things made of this stone and the New Zealânders carve it into spear and axe-heads. The soft Jade, which is a kind of stearite or soap-stone is sometimes sold for the real Jade, but even the uninitiated can make out the difference by its inferior hardness.

Medicinal Properties.

THE word Nephrite (another name for the Jade) is derived from a Greek word, which means a kidney, from the supposition that the stone had the virtue of healing all diseases of that organ.

THE MOCHA-STONE.

THE Mocha-stone, otherwise called the Mocha-stone, is a variety of Quartz containing "infiltrated dendritic oxides of manganese and iron, which give it the appearance of containing vegetable remains."

It is so called on account of its being found in Mocha, in Arabia. Some people say that the name is only a corruption of moschas, or moss-stone.

---

name of "Schorl," from a village where it is found in large quantities. It was first brought to Europe from Ceylon by the Dutch. The earliest record on this stone is to be found in a book published in Leipzig in 1707, called "Curious Speculations of Sleepless Nights." Formerly, the German Jews were the only persons who could be found to purchase the stone. The Tourmaline is now sold under a variety of names, owing to the advantage it has of possessing a diversity of colors. But it can be distinguished from other stones by its acquiring magnetic properties when subjected to heat.

THE CINNAMON-STONE.

This stone has been spoken of under the heading of "Garnet;" (page 473).

THE VIOLET-RUBY.

(See page 231.)

सूतजी बोले ।

तर्जमा ।

रत्नोकी परीक्षा मैं कहते हैं। पूर्व्वहि वल नाम करके एक असुर भया। उन्ने इन्द्र आदि देवोंका जित लिया, लेकिन वह ऐसा था, की इन्द्र आदि नहि जित सके। १० ।

तव देवता सव कोइ छल करके वलासुरके निकट यही वर प्रार्थना किये, की तुम हमारे सवके यज्ञमे पशु हो, वलासुर देवता सवको सो वर देके देवतोकी यज्ञमे मारा गया । ११ ।

सो वलासुर अपने वाक्यसे वद्ध होकर लोकके और देवता सवके हितका वदे पशु होकर खाम्भामे प्रवेश किया । १२ ।

The Genesis of Gems according to Purânas.

TRANSLATION.

Súta saith.

10. I am going to describe the way of testing gems. There was an *asura,** in days of yore, named *Vala.* He is said to have routed Indra and the other gods, and to have proved invincible by them.

11. The wily gods begged of their antagonist the boon that he metamorphosed himself into their sacrificial beast. The puissant *asura* granted their prayer, and thus met his end.

12. Having been entangled in his own promise, he became a beast and entered into a pillar, purely actuated by motives of benevolence to the gods.

পৌরাণিকমতে রত্নোৎপত্তিবিবরণ।

অনুবাদ।

সূত বলিয়াছিলেন।

আমি রত্ন সমুদায়ের পরীক্ষা বলিতেছি। পুবাকালে বল নামে এক অসুর ছিল, ইন্দ্রাদি দেবগণ তাহার নিকট পরাভূত হন, কিন্তু তাঁহারা তাহাকে পরাজয় করিতে পারেন নাই। ১০।

দেবতারা ছল কবিযা বলাসুরেব নিকট এই বর প্রার্থনা করেন যে, তুমি আমাদিগের যজ্ঞে পশু হও, অতি প্রবল-প্রতাপ বলাসুর দেবতাগণকে সেই ববই দিয়া যজ্ঞে বিনষ্ট হয়। ১১।

সেই বলাসুর আপনার বাক্যরূপ অশনিতে নিযন্ত্রিত হইযা লোকের ও দেবতাদিগের হিতের নিমিত্ত পশু হইযা স্তম্ভমধ্যে প্রবেশ করে। ১২।

---

* Compounded of *a* (not—non) and *sura* (god). It signifies an adversary of the gods. Divested of figure, and read in the light of Sanskrit Philology, the epithet would mean an aboriginal person, as distinguished from an Aryan.

दुत्पत्य जग्राह ततो गरुत्मान्।
मूर्च्छापरीतः सहसैव घोणा-
रन्ध्रद्वयेन प्रमुमोच सर्व्वं॥ ३६॥

तर्जमा।

वासुकि गरुड़के भयसे भीत होकरके तिस समयमेभी बलासुरका सो पित्तको गन्धतृण, शिलारस और मल्लिका-फुलके गन्धसे युक्त, नानाप्रकारका वृक्षसे आच्छादित अति-श्रेष्ठ माणिक्य पर्ब्बतका समीपमे वाहाड़ देते है। ३४।

गरुड़के आगमनमात्रमे वासुकिके मुखसे सेा पित्त समुद्रके समीपमे गिरता भया, तबसे सो स्थान पान्नेका खान भया। ३५।

तिससमयमे वासुकिके मुखसे जो पित्त गिरते है, तिसको कुछ भाग गरुड़ ग्रहण करते भये, तिससे गरुड़को मूर्च्छा होती भयी, तिस समयमेभी सब पित्त तिसका नासाके छिद्रसे निर्गत होते है। ३६।

TRANSLATION.

34. Terrified at this, he immediately dropped the bile upon a valley of the celebrated *Mánikya* mountain, hot with the odour of *mallikā* flowers, and containing in its wood of various trees, *gandhatrina** and *silárasa.*†

35. No sooner *Garura* came up than the bile suddenly escaped the mouth of *Vásuki* and fell on the shores of the ocean. Ever since that place has been a mine of emeralds.

36. At this time, *Garura*, on taking a little of the bile that fell, became insensible, and anon came out all the quantity of the bile through his nostrils.

অনুবাদ।

সর্পরাজ গরুড়ভয়ে ভীত হইয়া তৎক্ষণাৎ সেই পিত্ত গন্ধতৃণ, শিলারস ও মল্লিকাবনগন্ধে সুবাসিত, নানা পাদপ-পরিবৃত ও অতিশ্রেষ্ঠ মাণিক্য পর্ব্বতের উপত্যকা ভূমিতে পরিত্যাগ করিলেন। ৩৪।

গরুড় আগমন করিবামাত্র সেই পিত্ত বাসুকির বদন হইতে সহসা স্খলিত হইয়া সমুদ্রের তীরবর্ত্তী ভূভাগে পতিত হওয়াতে তদবধি সেই স্থান মরকতের আকরে পরিণত হয়। ৩৫।

সেই সময়েই বাসুকির বদনভ্রষ্ট পিত্তের কিয়দংশ গ্রহণ করাতে গরুড় মূর্চ্ছিত হইয়া পড়েন এবং তৎক্ষণাৎ সমুদায় পিত্ত তাঁহার নাসারন্ধ্র দ্বারা নির্গত হইয়া যায়। ৩৬।

ভুজগাধিপতি কাবেরী নদীর তীরবর্ত্তী ভূভাগ, বিন্ধ্যপর্ব্বত, যবনদেশ, চীন ও নেপালের ভূমিভাগে যে দানবপতির মেদ নিক্ষেপ করেন, তাহাতেই সেই সকল প্রদেশে আকাশের ন্যায় পরিষ্কৃত তৈলাখ্য নামে স্ফটিক জন্মে। ৪৮।

वज्रस्य वर्णानुसारि वर्णादिकं।

मूलम्।

हीरकः पुंसि वज्रोऽस्त्री चन्द्रमणिवरश्च सः।
स तु श्वेतः स्मृतो विप्रो लोहितः क्षत्रियो मतः।
पीतो वैश्योऽसितः शूद्रश्चतुर्वर्णात्मकश्च सः॥ ४९॥
विप्रः सोऽपि रसायनेषु बलवानष्टाङ्गसिद्धिप्रदो
राजन्यस्तु नृणां वलीपलितजिन्मृत्युं जयेदञ्जसा।
द्रव्याकर्षणसिद्धिदस्तु सुतरां वैश्योऽथ शूद्रो भवेत्
सर्व्वव्याधिहरस्तदेष कथितो वज्रस्य वर्णे गुणः॥ ५०॥

हीरेका वर्णके अनुसार जातिविभाग आदि कहते हैं।

तर्जमा।

हीरक शब्द नियत पुंलिङ्ग है, लेकिन वज्र शब्द पुंलिङ्ग और नपुंसककालिङ्ग दोनो लिङ्गभी होता है, तिसको चन्द्रमणि कहते है। हीरा उज्ज्वल होनेसे ब्राह्मण वर्ण, लालरङ होनेसे क्षत्रिय वर्ण, पीलारङ होनेसे वैश्य वर्ण और काला रङ होनेसे शूद्र वर्ण होता है। ४९।

ब्राह्मणवर्ण हीरा रसायन कार्य्यमे अति प्रशस्त और प्रभुत्व, अमात्य, मित्र, धन, राज्य, कोट, सेना और पुरवासी आदमी, यह अष्टाङ्गका सिद्धि देनेवाला; क्षत्रियवर्ण हीरा दृढ़ता और अकालमृत्युका भय हरण करता है; वैश्यवर्ण हीरा समुदाय द्रव्यको देनेवाला है और शूद्रवर्ण हीरा सब व्याधिका विनाश कर्त्ता है। ५०।

Division of Diamonds into Castes.

TRANSLATION.

49. The word *hiraka* (diamond) is always masculine; *vajra*, both masculine and feminine, and it is another name for *chandra-mani* (moon-stone). A white *vajra* is a Brahmin, a red one is a Kshatriya, a yellow one is a Vaishya, and a black one is a Súdra

50. The Brahmin diamond (*vajra*) is very useful in chemical operations, and brings about the acquisition of lordship, friends, courtiers, wealth, kingdom, forts, armies, and good luck to one's family. A Kshatriya diamond wards off old age and premature death; a Vaisya one crowns every endeavour after acquisition with success; while a Súdra one is a panacea.

হীরকের বর্ণানুসারে জাতিবিভাগাদি।

অনুবাদ।

হীরক শব্দ নিয়ত পুংলিঙ্গ, কিন্তু বজ্র শব্দ পুংলিঙ্গ ও ক্লীবলিঙ্গ উভয় লিঙ্গই হইয়া থাকে এবং তাহাকেই চন্দ্রমণি বলে। বজ্র শ্বেতবর্ণ হইলে বিপ্রবর্ণ, লোহিতবর্ণ হইলে ক্ষত্রিয়বর্ণ, পীতবর্ণ হইলে বৈশ্যবর্ণ এবং কৃষ্ণবর্ণ হইলে শূদ্রবর্ণ বলিয়া পরিগণিত হয়। ৪৯।

ব্রহ্মবর্ণ বজ্র রসায়ন কার্য্যে অতি প্রশস্ত; ও প্রভুত্ব, অমাত্য, সুহৃৎ, ধন, রাজ্য, দুর্গ, সৈন্য ও পৌরবর্গ এই অষ্টাঙ্গের সিদ্ধিদাতা; ক্ষত্রিয়বর্ণ বজ্র মনুষ্যগণের জরা ও অকালমৃত্যু হরণ করে; বৈশ্যবর্ণ বজ্র সমুদায় দ্রব্যাহরণে সিদ্ধিপ্রদ এবং শূদ্রবর্ণ বজ্র সর্ব্বপ্রকার ব্যাধি বিনাশ করে। ৫০।

वज्रस्य लिङ्गभेदः।

मूलम्।

पुंस्त्रीनपुंसकाश्चैते लक्षणीयाश्च लक्षणैः।
सुवृत्ताः फलसम्पूर्णास्तेजोयुक्ता बृहत्तराः।
पुरुषास्ते समाख्याता रेखाविन्दुविवर्ज्जिताः॥ ५१॥
रेखाविन्दुसमायुक्ताः षड्स्रास्ते स्त्रियः स्मृताः।
त्रिकोणाश्च सुदीर्घाश्च ते विज्ञेया नपुंसकाः॥ ५२॥
तेषु स्युः पुरुषाः श्रेष्ठा रसवन्धनकारिणः।
स्त्रियः कुर्व्वन्ति कायस्य कान्तिं स्त्रीणां सुखप्रदाः।
नपुंसकास्त्ववीर्य्याः स्युरकामाः सत्त्ववर्जिताः॥ ५३॥

हीराका लिङ्गभेद कहते हैं।

तरजमा।

प्रकारभेदसे हीरा पुरुष, स्त्री और नपुंसक, यही तिन जाति होते भये, विशेष विशेष लक्षणके द्वारा यह सब जाना जावे। उत्तम गोलाकार, नाना शुभलक्षणयुक्त, अति तेजस्वी कदमे बड़ा और चिर और छिटाकरके वर्ज्जित हीरा पुरुषजातिके बीचमे गिणती है। ५१।

चिर और छिटाकरके युक्त, छ-कोणविशिष्ट हीरा स्त्रीजातिका बीचमे और तिनकोणा बहुत लम्बा हीरा नपुंसक जातिके बीचमे गणना होता है। ५२।

यह तिन जातिका हीराका बीचमे पुरुषजाति हीरा अति प्रशस्त और रसायन कार्य्यमे अति श्रेष्ट; स्त्रीजाति हीरा देहमे शोभा देता है और स्त्रीगणको सुख देनेवाला और नपुंसकजाति हीरा वीर्य्यहानि, दुर्ब्बल और अभिलाषको नाश करनेवाला है। ५३।

Distinction of Gender.

TRANSLATION.

51. Diamonds are divided into masculine, feminine, and neuter gender, according to character. Each class is distinguished by peculiar marks. A finely circular diamond, possessing happy signs, highly lustrous, large, and free from *rekhá*, *vindu*, &c., is masculine.

52. A six-cornered diamond marked with *rekhá*, *vindu*, &c., is feminine; and a very large triangular diamond is neuter.

53. Of these, the masculine kind is the best, and very useful in chemical operations. A feminine diamond brings grace, and is very auspicious to women, but a neuter diamond is destructive of energy, and brings weakness and disappointment.

হীরকের লিঙ্গভেদ।

অনুবাদ।

প্রকারভেদে হীরক পুরুষ, স্ত্রী ও নপুংসক এই তিন জাতীয় হইয়া থাকে, বিশেষ বিশেষ লক্ষণদ্বারা তাহা পরিজ্ঞাত হওয়া যায়। উত্তম গোলাকার, নানা শুভ লক্ষণাক্রান্ত, অতি তেজস্বী, আকারে বৃহৎ ও রেখাবিন্দু-বিবর্জিত হীরক পুরুষজাতিমধ্যে গণনীয়। ৫১।

রেখাবিন্দুবিশিষ্ট ও ষট্‌কোণযুক্ত হীরক স্ত্রীজাতিমধ্যে এবং ত্রিকোণসম্পন্ন ও অতি দীর্ঘাকার বজ্র নপুংসকজাতিমধ্যে গণ্য। ৫২।

এই তিন জাতির মধ্যে পুরুষজাতীয় হীরক অতি প্রশস্ত ও রসায়নকার্য্যে অতি শ্রেষ্ঠ; স্ত্রীজাতীয় হীরক দেহের লাবণ্য-বৃদ্ধিকারক ও রমণীগণের পক্ষে অতি সুখপ্রদ এবং নপুংসকজাতীয় হীরক বীর্য্যহানিকর, দুর্ব্বলকারক ও অভিলাষ-ধ্বংসকারী। ৫৩।

मूलम्।

मौक्तिकस्य विशेषगुणाः।

मौक्तिकञ्च मधुरं सुशीतलं
दृष्टिरोगशमनं विषापहं।
राजयक्ष्मपरिकोपनाशनं
क्षीणवीर्य्यबलपुष्टिवर्द्धनं॥ ६३॥

रत्नसमुदायके साधारण गुण कहते हैं।

तर्जमा।

मोति, मुंगा, हीरा, नीलम, लशुनिया और स्फटिक आदि सब रत्न दास्तकारक, कषायरस, स्वादु और शीतल है। ६१।

माणिकका विशेष गुण कहते हैं।

रत्नतत्वमे जाना जाता है, की माणिक मधुररस, शीतल, वायुपित्तका नाश करनेवाला और रसायनमे अति प्रशस्त है। ६२।

मोतिका विशेष गुण कहते हैं।

मोति मधुररस, अतिशीतल, नेत्ररोगका, विषका, यक्ष्मा रोगका, नाश करनेवाला और दुर्ब्बल शरीरको वीर्य्य, बल और पुष्टि देते हैं। ६३।

TRANSLATION.

General Properties of Gems, according to Sanskrit Medical Science.

61. Pearl, coral, diamond, sapphire, the cat's-eye, crystal and other gems are laxative, astringent in taste, palateable and cool.

Particular Properties of the Ruby.

62. The Science of Gems has it that ruby is sweet, cool, specific for imperfect oxidation and biliousness, and very valuable in chemical operations.

Particular Properties of the Pearl.

63. The Pearl is sweet in taste, very cool, and specific for eye-diseases, cures poisoning and atrophy, and brings strength and vigor to weak limbs.

অনুবাদ।

সংস্কৃত বৈদ্যক শাস্ত্রমতে রত্নসমুদায়ের সাধারণ গুণ।

মুক্তা, বিদ্রুম, হীরক, ইন্দ্রনীল, বৈদূর্য্য ও স্ফটিকাদি সমুদায় রত্নই সারক, কষায়, স্বাদু ও শীতল। ৬১।

মাণিক্যের বিশেষ গুণ।

রত্নতত্ত্বে পরিজ্ঞাত হওয়া যায় যে, মাণিক্য মধুর, স্নিগ্ধ, বায়ুপিত্তনাশক এবং রসায়নে অতি প্রশস্ত। ৬২।

মৌক্তিকের বিশেষ গুণ।

মুক্তা মধুর, অত্যন্ত শীতল, চক্ষুরোগনাশক, বিষাপহ, রাজযক্ষ্মা রোগের বিশেষ উপকারী এবং ক্ষীণ ব্যক্তিদিগের বীরত্ব, বল ও পুষ্টিবর্দ্ধন করে। ৬৩।

पुष्परागोऽम्लः शीतश्च वातजिद्दीपनः परः।
यशः श्रियञ्च प्रज्ञाञ्च धारणात् कुरुते नृणां ॥ ६५ ॥

प्रवालस्य विशेषगुणाः।

प्रवालो मधुरश्चाम्लः कफपित्तादिदोषनुत्।
वीर्य्यकान्तिकरः स्त्रीणां धृतो मङ्गलदायकः ॥ ६६ ॥

तर्जमा।

गोमेदका विशेष गुण कहते हैं।

गोमेद मणि अम्लरस, शरीरको ताप देनेवाला, वायुके जो कोप, तिसको नाश करता है, उदराग्निका वृद्धि, अन्नको परिपाक करनेवाला और धारण किहेपर पापनाश होता है। ६४।

पुखराजका विशेष गुण कहते हैं।

पुखराज अम्लरस, शीतल, वायुका नाश, अग्निका वृद्धि करनेवाला और धारण किहेपर यश, लक्ष्मी, अभिज्ञता लाभ होता है। ६५।

मुंगाका विशेष गुण कहते हैं।

मुंगा अम्लमधुररस, कफपित्तदोषका नाश करनेवाला, बलकारी, शरीरके शोभा देनेवाला और धारण करनेसे स्त्रीजनको मङ्गल देता है। ६६।

TRANSLATION.

Particular Properties of the Zircon.

64. The Zircon is sour, heating, and curative of unhealthy oxidation, sharpens the appetite, helps digestion, and takes away sin.

Particular Properties of the Topaz.

65. The Topaz is sour, cool, and curative of abnormal oxidation, causes appetite, and brings fame, wealth and wisdom.

Particular Properties of the Coral.

66. The Coral is sour, sweet, specific for cold and biliousness, nutritious, and grace-imparting; and the wearing of it is very beneficial to women.

অনুবাদ।

গোমেদের বিশেষ গুণ।

গোমেদ মণি অম্লরস, উষ্ণকারক, বায়ুকোপবিনাশক, জঠরাগ্নির উদ্দীপক, পরিপাককারক এবং ধারণে পাপনাশক। ৬৪।

পুষ্পরাগের বিশেষ গুণ।

পুষ্পরাগ অম্লরস, শীতল, বায়ুনাশক, অগ্নি-বৃদ্ধিকারক এবং ধারণে যশ, লক্ষ্মী, অভিজ্ঞতা প্রদান করে। ৬৫।

প্রবালের বিশেষ গুণ।

প্রবাল অম্লমধুররস, কফপিত্তদোষনাশক, বলকারী, কান্তিপ্রদ এবং ধারণে স্ত্রীলোকদিগের পক্ষে অতি মঙ্গলদায়ক। ৬৬।

वैदूर्य्यस्य विशेषगुणाः।

वैदूर्य्यमुष्णमम्लञ्च कफमारुतनाशनं।

गुल्मशूलप्रशमनं भूषितञ्च शुभावहं॥ ७१॥

सूर्य्यकान्तस्य विशेषगुणाः।

सूर्य्यकान्तो भवेदुष्णो निर्म्मलश्च रसायनः।

वातश्लेष्महरो मेध्यः पूजनाद्रवितुष्टिदः॥ ७२॥

तर्जमा।

पान्नेका विशेष गुण कहते हैं।

पान्ना शीतल, बिषका नाश करनेवाला, मधुररस, दास्त, अजीर्ण और पित्तका नाश, भोजनमे रुचि, शरीरके पुष्टि करनेवाला और अङ्गमे धारण किहेपर पिशाचकी भय छुटते है। ७०।

लशुनियेका विशेष गुण कहते हैं।

लशुनिया उष्ण, अम्लरस, कफ और वातका नाश करनेवाला, शूल और गुल्म रोगमे बड़ा उत्तम औषध है और भूषणके सहित अङ्गमे धारण किहेपर अति शुभ फल देता है। ७१।

सूर्य्यकान्तके विशेष गुण कहते हैं।

सूर्य्यकान्त मणि उष्ण, निर्म्मल, रसायनकार्य्यमे अति प्रशस्त, वात और श्लेष्माका नाश करनेवाला, अति पवित्र और सूर्य्यको तुष्टि देता है। ७२।

TRANSLATION.

Particular Properties of the Emerald.

70. The Emerald is cool, good in poisoning, sweet and purgative, helps digestion, cures biliousness, removes disrelish, is nutritious, and wards off spectral influence.

Particular Properties of the Cat's-eye.

71. The Cat's-eye is warm, sour and curative of cold, imperfect oxidation, chronic derangements of the spleen and colic, and is generally auspicious when worn.

Particular Properties of the Sun-stone.

72. The Sun-stone is warm, flawless, good in cold and in defective oxidation, and sacred; it is an *elixir vitæ*, and is the delight of the Sun.

অনুবাদ।

মরকতের বিশেষ গুণ।

মরকত শীতল, বিষঘ্ন, মধুররস, বিরেচক, অজীর্ণনাশক, পিত্তঘ্ন, রুচিজনক, শরীরের পুষ্টিকারক এবং অঙ্গে ধৃত হইলে পিশাচের ভয় নিবারিত হয়। ৭০।

বৈদূর্য্যের বিশেষ গুণ।

বৈদূর্য্য উষ্ণ, অম্লরস, কফবাতনিবারক, গুল্ম ও শূল রোগের মহৌষধি এবং ভূষণের সহিত অঙ্গে ধৃত হইলে শুভ ফল প্রদান করে। ৭১।

সূর্য্যকান্তের বিশেষ গুণ।

সূর্য্যকান্ত মণি উষ্ণ, নির্ম্মল, রসায়ন, বাতশ্লেষ্মহর, অতি পবিত্র এবং সূর্য্যের তুষ্টিপ্রদ। ৭২।

मूलम्।

चन्द्रकान्तस्य विशेषगुणाः।

चन्द्रकान्तस्तु शिशिरः स्निग्धः पित्तास्रदाहनुत्।
शिवप्रीतिकरः स्वच्छो ग्रहालक्ष्मीविनाशनः॥ ७३॥

स्फटिकस्य विशेषगुणाः।

स्फटिकः सौम्यवीर्य्यः स्यात् पित्तदाहार्त्तिशोथनुत्।
तस्याक्षमालाजपतां धत्ते कोटिगुणं फलं॥ ७४॥

वैक्रान्तस्य विशेषगुणाः।

वज्राभावे तु वैक्रान्तं रसवीर्य्यादिके समं।
क्षयकुष्ठविषघ्नञ्च पुष्टिदं सुरसायनं॥ ७५॥

तर्जमा।

चन्द्रकान्त मणिका विशेष गुण कहते है।

चन्द्रकान्तमणि शीतल, स्निग्ध, रक्तपित्तका नाश करनेवाला, निर्म्मल, महादेवको प्रसन्न करनेवाला, अङ्गमे धारण किहेपर ग्रहका दोष और दारिद्र्यका नाश करता है।७३।

स्फटिकका विशेष गुण कहते हैं।

स्फटिकमणि बल करनेवाला, पित्त, दाह, व्याधि, फुला, यह सबका नाश करनेवाला,अन्य मालासे जप किहें जेतना फल है, उससे कोटिगुण अधिक फल स्फटिक मणिके मालासे जप किहेंसे होता है। ७४।

वैक्रान्तका विशेष गुण कहते हैं।

वैक्रान्तमणि क्षयरोग, कुष्ठव्याधि और विषदोष, यही तिनोंको नाश करनेवाला, जेह औषधमे हीरा देनेको लिखते हैं, तिसमे जौ हीरा ना मिले, तौ वैक्रान्त मणि देना चाहिये। ७५।

Translation.

Particular Properties of the Chandrakánta.

73. The *Chandrakánta* is cool and cooling, and cures hæmorrhage from the nose and mouth, is transparent, very much liked by *Mahádeva*, and, when worn, removes 'chill poverty' and baneful astral influences.

Particular Properties of Crystal.

74. The Crystal gives strength and cures biliousness, morbid heat and fistula. Its rosary is infinitely more efficacious than any other.

Particular Properties of Vaikránta.

75. The *Vaikránta* is specific for consumption, leprosy and poisoning. It may enter into medicines as a substitute for diamond, inasmuch as it is fully equal to the latter in producing energy.

অনুবাদ।

চন্দ্রকান্তের বিশেষ গুণ।

চন্দ্রকান্ত শীতল, স্নিগ্ধ, রক্তপিত্তবিনাশক, স্বচ্ছ, মহাদেবের প্রীতিপ্রদ এবং অঙ্গে ধৃত হইলে গ্রহবৈগুণ্য ও দারিদ্র্যদোষ নাশ করে। ৭৩।

স্ফটিকের বিশেষ গুণ।

স্ফটিক বলকারক, পিত্ত, দাহ, ব্যাধি ও শোথ ইহাদিগের নাশকারী, অন্য কোন বস্তুর মালাতে কোন দেবতার জপ করিলে যে ফল লাভ হয়, স্ফটিকের মালা জপে তদপেক্ষা কোটি গুণ ফল লাভ হইয়া থাকে। ৭৪।

বৈক্রান্তের বিশেষ গুণ।

বৈক্রান্ত মণি ক্ষয়রোগ, কুষ্ঠ ও বিষদোষ এই তিনেরই নাশক, হীরকের অভাবে ঔষধে বৈক্রান্ত ব্যবহৃত হইতে পারে, যেহেতু বৈক্রান্ত মণি রসবীর্য্যাদিতে হীরকের সমান। ৭৫।

मूलम् ।

वैक्रान्तं वज्रवच्छोध्यं नीलं श्वेतञ्च लोहितं ।
भस्मीभूतञ्च वैक्रान्तं वज्रस्थाने नियोजयेत् ॥ ७६ ॥

ग्रहाणां ज्योतिःशास्त्रसम्मत रत्नपीठनिर्णयः ।

पद्मरागविचित्राङ्ग शुद्धकाञ्चनसम्वृतं ॥ ८८ ॥

तरजमा।

नीतिशास्त्रके जाननेवाले पण्डित लोग कहते हैं, की सूर्य्य आदि आठ ग्रहका दशामे जात राजालोगके यही आठ प्रकारका सिंहासन क्रम क्रमसे शुभजनक है, अर्थात् सूर्य्यकी दशामे जन्म भये पर पद्मसिंहासन, चन्द्रकी दशामे जन्म भये पर शङ्खसिंहासन, मङ्गलकी दशामे जन्म भये पर गजसिंहासन, बुधकी दशामे जन्म भये पर हंससिंहासन, बृहस्पतिकी दशामे जन्म भये पर सिंहसिंहासन, शुक्रकी दशामे जन्म भये पर भृङ्गसिंहासन, शनिकी दशामे जन्म भये पर मृगसिंहासन और राहुकी दशामे जन्म भये पर हयसिंहासनके उपर उपवेशन करणा चाहिये। ८७।

पद्मसिंहासनका विवरण कहते हैं।

जो सिंहासन गम्भारीकाठके बनाये, पद्ममाला और पद्मरागमणिकरके चित्र करणा, अच्छे सोनेसे आच्छादित करणा। ८८।

TRANSLATION

87 In the opinion of the authorities, these eight kinds of thrones are respectively auspicious to kings born under the eight astral influences ,— that is, if a king is born under the influence of the Sun, the Lotus , if of the Moon, the Conch , if of *Mangala*, the Elephant , if of *Budha* the Swan , if of *Vrihaspati*, the Lion , if of *Sukra*, the Bee , if of *Sani*, the Deer , if of *Ráhu*, the Horse throne, should be used

The Lotus Throne

88 THE throne which is made of *gámbhari* wood, which is mounted with pure gold, which is decorated with lotus garlands and rubies .

অনুবাদ।

নীতিশাস্ত্রবিৎ পণ্ডিতেরা বলেন, সূর্য্যাদি অষ্ট গ্রহের দশাজাত রাজগণের পক্ষে এই অষ্টবিধ সিংহাসন ক্রমান্বয়ে শুভজনক , অর্থাৎ সূর্য্যের দশায় জন্ম হইলে পদ্মসিংহাসন, চন্দ্রের দশায় জন্ম হইলে শঙ্খসিংহাসন, মঙ্গলের দশায় জন্ম হইলে গজসিংহাসন, বুধের দশায় জন্ম হইলে হংসসিংহাসন, বৃহস্পতির দশায় জন্ম হইলে সিংহসিংহাসন, শুক্রের দশায় জন্ম হইলে ভৃঙ্গসিংহাসন, শনির দশায় জন্ম হইলে মৃগসিংহাসন এবং রাহুর দশায় জন্ম হইলে হয় সিংহাসনে উপবেশন করা কর্ত্তব্য। ৮৭।

পদ্মসিংহাসন।

যে সিংহাসন গম্ভারীকাষ্ঠগঠিত, পদ্মমালা ও পদ্ম রাগ মণিতে বিচিত্রিত, বিশুদ্ধ কাঞ্চনে আচ্ছাদিত। ৮৮।

रत्नके बनाये शिवलिङ्गकी पूजाका फल कहते हैं।

सूतजी बोले।

विश्वकर्म्मा सृष्टिकर्त्ता ब्रह्माके आज्ञाके अनुसार तिन सबको अपने अपने अधिकारके अनुरूप शिवलिङ्गका निर्म्माण करके सबको देते भये। १४८।

विष्णु इन्द्रनीलका, इन्द्र मणिका, कुवेर सोनेका, शिवलिङ्गकी पूजा करते हैं। १४९।

चन्द्रमा मोतिका, अग्नि हीराका, वरुण स्फटिक मणिका, सूर्य तावेका शिवलिङ्गकी पूजा करते भये। १५०।

Translation.

The Fortune acquired by Worshipping Gemmed Images of Siva.

Súta said :—

148. Having been desired by Brahmá—the Creator—*Viswakarmá** made for and gave to each a *linga* of Siva, suited to his possessions.

149-150. Vishnu always worships a *Siva-linga* of sapphires; Indra, one of rubies; *Kuvera*, one of gold; the sensible Moon, one of pearls; *Agni*, an image of diamonds; *Varuna*, an image of crystal; the twelve *A'dityas*, an image of copper.

অনুবাদ।

রত্ননির্ম্মিত শিবপূজার ফল।

সূত বলিয়াছিলেন।

বিশ্বকর্ম্মা স্ৃষ্টিকর্ত্তা ব্রহ্মার আদেশানুসারে তাঁহাদিগের স্ব স্ব অধিকারের অনুরূপ শিবলিঙ্গ নির্ম্মাণ করিয়া সকলকে দিলেন। ১৪৮।

বিষ্ণু ইন্দ্রনীলময়, ইন্দ্র পদ্মরাগময়, কুবের স্বর্ণময় শিবলিঙ্গ সর্ব্বদা পূজা করেন। ১৪৯।

বুদ্ধিমান্ চন্দ্র মুক্তাময়, অগ্নি হীরকময়, বরুণ স্ফটিক-ময়, দ্বাদশ আদিত্য তাম্রময় শিবলিঙ্গের আরাধনা করেন। ১৫০।

जो मनुष्य सोणेका फुल बनायकरके श्रीकृष्णकी पूजा मास भरि करे, सो मनुष्य इह लोकमें कुबेरके समान धनी होये और मरण भये पर मुक्ति पावे। १८०।

और कहते हैं।

नाभिका सौन्दर्य्यके हेतु अमूल्य रत्नका हाजार दर्पण बनायकरके नारायणको देना चाहिये। १८१।

नाकका सौन्दर्य्यके हेतु अमूल्य रत्नकरके बनाया हाजार कमल श्रीकृष्णको देना चाहिये। १८२।

हे शैलनन्दिनि! दांतका सौन्दर्य्यके हेतु लाख मोति गोलोकनाथको देना चाहिये। १८३।

TRANSLATION.

180. By worshipping Krishna with golden flowers, a man can become as rich as *Kuvera*, and in after-life, can attain *nirvána*.*

Further:—

181. If a person worships *Náráyana* with a thousand mirrors, studded with jewels, he attains a beautiful navel.

182. For attaining a good nose, one should worship *Gopináth* with a thousand lotuses decorated with gems.

183. O Daughter of the Mountain, for good teeth, a man should offer *Golakanáth* one hundred thousand pearls.

অনুবাদ।

যে ব্যক্তি ভক্তিপরায়ণ হইয়া এক মাস স্বর্ণের পুষ্পদ্বারা শ্রীকৃষ্ণের পূজা করে, সে ইহকালে কুবেরের ন্যায় সম্পত্তি লাভ করিয়া পরকালে নির্ব্বাণমুক্তি প্রাপ্ত হয়। ১৮০।

আরও বলিতেছি।

নাভির সৌন্দর্য্য হেতু নারায়ণকে অমূল্য রত্নখচিত সহস্রসংখ্যক দর্পণ দেওয়া উচিত। ১৮১।

নাসিকার সৌন্দর্য্য হেতু গোপীনাথ শ্রীকৃষ্ণকে অমূল্য রত্ন-নির্ম্মিত সহস্রসংখ্যক কমল দেওযা কর্ত্তব্য। ১৮২।

হে শৈলনন্দিনি। দন্তের সৌন্দর্য্য হেতু গোলোকনাথ শ্রীকৃষ্ণকে লক্ষ মুক্তা দান করা বিধেয়। ১৮৩।

तर्जमा।

रत्नके पर्व्वतके दान कहते हैं।

मत्स्यावतार नारायण बोले।

इसको पर रत्नाचल बड़ा उत्तम दान कहते हैं। हाजार मोतिका बनाया पर्व्वत अति उत्तम। २२०।

पांच शौ मोतिका बनाया पर्व्वत मध्यम, तिन शौ मोतिका बनाया पर्व्वत अधम और आढ़ाइ शौ मोतिका बनाया गण्डशैल निर्म्माण करणा चाही। २२१।

मोतिका बनाया पर्व्वतके पूर्व्व दिशामे हीरा और गोमेद, दक्षिण दिशामे नीला, बीचमे दश हाजार पुखराज, पश्चिम दिशामे लशुनिया और मुंगा और उत्तर दिशामे माणिकके समान वर्णयुक्त मणि देना चाही। २२२। २२३।

TRANSLATION.

The Bestowal of the Gemmed Mountain.

220. The Fish Incarnation of the Deity said;— I am now going to tell of the bestowal of the Gemmed Mountain. The best Mountain should be made of a thousand pearls.

221. The next best, by five hundred; the next, by three hundred; and the last, by two hundred and fifty pearls.

222—223. The eastern part should be made of gems resembling diamonds and zircons; the southern, by those resembling sapphires; the middle, by ten thousand gems like topazes; the west, by gems resembling cat's-eyes and coral; and the north, by ruby-like jewels.

অনুবাদ।

রত্নাচল দান।

মৎস্যাবতার ভগবান্ বলিয়াছিলেন।

অতঃপর অত্যুৎকৃষ্ট রত্নাচল দানের কথা বলিতেছি। সহস্রসংখ্যক মুক্তা দ্বারা অতি উত্তম সর্ব্বোৎকৃষ্ট রত্নাচল নির্ম্মিত হইবে। ২২০।

পঞ্চ শত মুক্তা দ্বারা মধ্যম, ত্রিশত মুক্তা দ্বারা অধম পর্ব্বত এবং সার্দ্ধদ্বিশত মুক্তা দ্বারা গণ্ডশৈল নির্ম্মাণ করিতে হইবে। ২২১।

মুক্তানির্ম্মিত রত্নাচলের পূর্ব্ব ভাগে হীরক ও গোমেদ; দক্ষিণ ভাগে ইন্দ্রনীল; মধ্য ভাগে অযুতসংখ্যক পুষ্পরাগ; পশ্চিম ভাগে বৈদূর্য্য ও বিদ্রুম এবং উত্তর ভাগে পদ্মরাগের ন্যায় বর্ণবিশিষ্ট মণিসমূহ যোজনা করিতে হইবে। ২২২।২২৩।

वालक पूजाके कालमे शिवमे चित्तकों लगायकरके भोजनके कालकों विताय देते भाया, तव तिसकी माता उस स्थानमे आवती भयी। २५०।

माता आयकरके वालककों शिवके सन्निकट आख मुद-करके ध्यानयुक्त देखके क्रोध करके तिसको हातसे खींच-करके चलने लगी। २५१।

पहिले वालककों हातसे खींचा, पाछे मारती भयी, जब वालक ना उठे, तव शिवकी मूर्त्तिका उठायकरके दूरमे वाहार देती भयी, तेह करके पूजाका व्याघात भया। २५२।

सो वालक अपने मातासे देवदेव महादेवका जो पूजाका व्याघात भया, तिससे महादेव वोलकरके रोदन करके भूमिमे गिरता भया। २५३।

TRANSLATION.

250. When the mother of the lad saw that the time of his noon-tide meal had gone by, she again came to the spot

251. Seeing him with closed eyes, absorbed in the contemplation of Siva, she grew wroth and pulled him forcibly by the arm.

252 When this, as well as upbraidings had failed, the woman flung away the image at a distance, in order to disturb the boy's devotions.

253. Seeing the worship of the trident-bearing god of gods thus disturbed by his own mother, with piteous cries he fell down on the ground.

অনুবাদ।

বালক যে সময়ে অনন্যমানসে শিবপূজায় রত হইয়া ভোজনকাল অতিক্রম করিল, তখন তাহার মাতা সেই স্থানে পুনরায় আগমন করিল। ২৫০।

জননী আসিয়া বালককে শিব সন্নিধানে চক্ষু মুদ্রিত করিয়া উপবিষ্ট থাকিতে দেখিয়া ক্রোধপ্রকাশপূর্ব্বক তাহার হস্ত ধারণ করিয়া আকর্ষণ করিতে লাগিল। ২৫১।

প্রথমে হস্তাকর্ষণ পশ্চাৎ তাড়না করাতেও যখন বালক উঠিল না, তখন গোপিনী কোপে অন্ধ হইয়া শিবলিঙ্গ দূরে নিক্ষেপ করত পূজার ব্যাঘাত জন্মাইয়া দিল। ২৫২।

সেই বালক স্বীয় জননীদ্বারা দেবদেব শূলপাণির পূজার ব্যাঘাত হইতে দেখিয়া মহাদেব বলিয়া উচ্চৈঃস্বরে রোদন করিতে করিতে ভূতলে পতিত হইল। ২৫৩।

चिन्तासिद्धिमणिका उपाख्यान कहते हैं ।

अत्यन्त श्रीमान् और बुद्धिमान् राजा दुर्ज्जय मनोहर दो पुत्रको लाभ करके कुछ कालके वीते अपने नगरके सन्निकट वनमे जाते भये । २६२ ।

राजा वनमे जाय करके वनवासी, पुण्यात्मा, तप और समाधि करके चित्तको ईश्वरमे लगये, ऐसे महात्मा गौरमुख नाम ऋषिको देखते भये । २६३ ।

हम यह आश्रममे प्रवेश करके परम धार्म्मिक ऋषिगणको दर्शन करें, राजा यह वातको विचारते ऋषिके आश्रमको गये । २६४ ।

जव राजा ऋषिके आश्रमको गये, तव गौरमुख ऋषि वड़े आनन्दको प्राप्त होकरके राजाको आदर करते भये । २६५ ।

TRANSLATION.

The anecdote of Chintásiddhi.

262. The handsome and intelligent king, Durjaya, begot two beautiful sons; and, after some years, went into the neighbouring forest.

263. On coming there, he found the holy, devout hermit, *Gauramukha.*

264. He entered the hermitage with the intention of seeing the holy sages.

265. On seeing the king, *Gauramukha* gladly welcomed him.

অনুবাদ।

চিন্তামিদ্ধি মণির উপাখ্যান।

অত্যন্ত শ্রীমান্ ও বুদ্ধিশালী রাজা দুর্জ্জয় মনোহর পুত্রদ্বয় লাভ করিয়া কিছুকাল গতে স্বীয় নগরান্তিক অরণ্যে গমন করিলেন। ২৬২।

রাজা কাননে গমন করিয়া অরণ্যবাসী, নিষ্পাপ, তপঃসমাধিতে নিমগ্নচিত্ত, মহাত্মা গৌরমুখনামক ঋষিকে দর্শন করিলেন। ২৬৩।

আমি এই আশ্রমে প্রবেশ করিয়া পরম-ধার্ম্মিক ঋষিগণকে দর্শন করি, মনে মনে এই চিন্তা করিয়া রাজা আশ্রমমধ্যে প্রবেশ করিলেন। ২৬৪।

রাজা আশ্রমে প্রবেশ করিলে ধর্ম্মাত্মা গৌরমুখ মুনি অত্যন্ত আনন্দিত হইয়া রাজার সমাদর করিলেন। ২৬৫।

चिन्तयामास किञ्चास्य मया देयन्तु भोजनं॥ २६९॥

तर्जमा।

हे महाराज! आज हम तुमको और तुमारा सब सेनाको अपने सामर्थके अनुसार भोजन करावेङ्गे, अपने वाहनको उतरके बांधाय देइ, व्रतावलम्बी ऋषि यह बात बोलके मौन रहते भये। २६६।

राजाभी ऋषिके प्रीतिसे बद्ध होकरके सब कोइ ऋषिकी आतिथ्यको मानते भये, तेह समयमे राजाका साथ चारों अक्षौहिणी सेना रही। २६७।

यह दरिद्र ब्राह्मण एतने आदमीओंको कैसे आतिथ्य करेगा, राजाभी यह प्रकारसे मनमे चिन्ता करके मौन होते भये। २६८।

गौरमुख ऋषि जब राजा दुर्ज्जयको आतिथ्यमे निमन्त्रण किये, तब अपने मनमे शोच करते हैं, की किस प्रकारसे हम एतने लोगोंको भोजन करावङ्गे, यह प्रकार चिन्ता-करते भये। २६९।

TRANSLATION.

266. "O! king, to-day I shall feed you and your retinue according to my power. Pray, do you leave your bearers." The devout man said this, and was silent.

267. Obliged by the hermit's courtesy, the king accepted his invitation with his followers. He had with him four *akhauhinis* of soldiers.

268. "Shall this poor hermit be able to provide food to so many men?," the king thought to himself.

269. On the other hand, the hermit began to think how he could feed such a number.

অনুবাদ।

মহারাজ! অদ্য আমি আপনাকে ও আপনার অনুচর-বর্গকে স্বশক্তি অনুসারে ভোজন করাইব, আপনি বাহন-দিগকে মোচন করুন, ব্রতাবলম্বী ঋষি এই কথা বলিয়া তূষ্ণীম্ভাব অবলম্বন করিলেন। ২৬৬।

রাজাও ঋষির ভক্তিতে বাধ্য হইয়া সহচরগণের সহিত আতিথ্য স্বীকার করিলেন; সে সময়ে রাজার সহিত চারি অক্ষৌহিণী সেনা ছিল। ২৬৭।

এই দরিদ্র তাপস কি আমাদিগের সকলের আহার-সামগ্রী প্রভৃতি দান করিবেন? রাজা এই প্রকার চিন্তাকুল হইয়া মৌনাবলম্বন করিলেন। ২৬৮।

গৌরমুখ ঋষি রাজা দুর্জয়কে নিমন্ত্রণ করিলেন বটে, কিন্তু কিরূপে আমি ইহাদিগের আহারাদি প্রদান করিব, এইরূপ চিন্তা করিতে লাগিলেন। ২৬৯।

स राजा विस्मयाविष्टश्चिन्तयामास दुःखितः।

कथमेव मणिद्वायं भवतीति पुनर्मम॥ २८७॥

तरजमा।

राजा यह व्यापार अपने आंखमे देखकरके अत्यन्त विस्मययुक्त होकरके मनमे चिन्ता करणे लगे, की यह मुनिका, या तपोबलका, या चिन्तासिद्धि मणिका प्रभाव है। २८५।

वियोगी मनुष्य जिस तरहसे पूर्णचन्द्रमाके अमृतमय किरण स्पर्शसेभी दुःख पाते है, दुष्ट आदमी तेहप्रकारसे सर्व्वदा भाले आदमीके संसर्गमे रहणेभी कोभी उत्तम कर्म्म करणेकेवासे समर्थ नहि होता है। २८६।

राजा दुर्णय मणिको प्रभाव देखकरके अति दुःखित होकरके विस्मययुक्त मनमे यह चिन्ता करणे लगे, की केह प्रकारसे यह मणि हमारे हातमे आवे। २८७।

TRANSLATION

286 Having witnessed with his own eyes this marvel, he was amazed and thought within himself—"This is either the work of this sage, or his austerities, or the virtue of the gem itself"

287. As a forlorn lover's misery is only aggravated by the balmy light of the full moon, the wicked, even when living in the company of the good, can never bring forth good

288 Having witnessed the virtue of the gem, Durjaya became very sad, and with astonishment, thought how he could possess himself of the jewel

---

অনুবাদ।

রাজা এই ব্যাপার স্বচক্ষে অবলোকন করিয়া অত্যন্ত বিস্ময়াবিষ্ট হইয়া মনে মনে চিন্তা করিতে লাগিলেন, ইহা কি মুনির বা তপোবলের অথবা এই মণিরসামর্থ্য ?। ২৮৬।

বিয়োগী ব্যক্তিগণ যেমন পূর্ণচন্দ্রের অমৃতময় কিরণ সংস্পর্শেও পদে পদে প্রমাদগ্রস্ত হয়, দুর্জ্জন ব্যক্তিও সেই রূপ সর্ব্বদা সজ্জনসংস্পর্শে থাকিয়াও কখনই বিশুদ্ধ কর্ম্ম করিতে সমর্থ হয় না। ২৮৭।

রাজা দুর্জ্জয় মণির প্রভাব দৃষ্টে অতিশয় দুঃখিত হইয়া বিস্ময়াবিষ্টচিত্তে এই চিন্তা করিতে লাগিলেন, কি উপায়ে এই মণিটী হস্তগত করিতে পারি। ২৮৮।

केह कोइ उपायसे हम ऋषिकी यह मणिको हरण करेंगे, राजा दुर्जय मनमे यह प्रकारसे चिन्ता करके तेह कालमे आश्रमसे बाहेरमे आयकरके अपने मन्त्रीको ऋषिके निकट चिन्तासिद्धि मणिको प्रार्थना करके भेजते भये। २८८।

सब रत्नका आधारूप यह मणिको राजाको दान करो, मन्त्री ऋषिको यह बात बलनेके कालमे गौरमुख ऋषि बड़ा कोप करके बोलते भये। २८९।

ब्राह्मणगण भिक्षा करणेकेवास्ते और राजलोग दान करणेकेवास्ते पृथ्वीपर जन्म लेते भये, लेकिन तुम राजा होकरके केह प्रकारसे दरिद्रके समान भिक्षा मागते है। २९०।

तुम जायकरके सो दुरात्मा राजा दुर्जयको कहो, दुराचार यही कालमे यह स्थानसे अपने स्थानको गमन करे, जिससे तिसका यह लज्जाकी बात दुसरा कोइ ना जाने। २९१।

TRANSLATION.

289. "I must take possession of this gem by any means," thought Durjaya for a while; and hastily leaving the cottage, he despatched his courtier to the sage to ask for *Chintásiddhi.*

290. "Do you grant this best of gems to His Majesty," said he to the sage; when the latter flew into a wrath and said,—

291. "The Brahmins are to receive, the kings are to give. But how can you, being a king, come asking like a poor man.

292. "Go to the wicked king, and tell him at once to quit this place,—let none know this hateful desire of his."

অনুবাদ।

যে কোন উপায়েই হউক আমি অবশ্যই ঋষির এই মণিরত্নটী হরণ করিব, রাজা দুর্জ্জয় মনে মনে ক্ষণকাল এইরূপ চিন্তা করিয়া তৎক্ষণাৎ আশ্রমের বহির্ভাগে গমনপূর্ব্বক স্বীয় অমাত্যকে ঋষির নিকট চিন্তাসিদ্ধি প্রার্থনায় প্রেরণ করিলেন। ২৮৯।

সমস্ত রত্নের আধার এই মণিটী রাজাকে দান করুন, অমাত্য ঋষিকে এই কথা বলিবামাত্র গৌরমুখ মুনি অত্যন্ত ক্রুদ্ধ হইয়া বলিলেন। ২৯০।

ব্রাহ্মণেরা প্রতিগ্রহ এবং রাজারা দান করিবার নিমিত্তই পৃথিবীতে জন্ম পরিগ্রহ করিয়া থাকেন, কিন্তু তুমি রাজা হইয়া কি প্রকারে দরিদ্রের ন্যায় ভিক্ষা করিতেছ? । ২৯১।

সেই দুরাত্মা রাজা দুর্জ্জয়কে গিয়া বল, দুরাচার শীঘ্র এস্থান হইতে প্রস্থান করুক, অন্য লোকে যেন তাহার এই ঘৃণিত অভিলাষ জানিতে না পারে। ২৯২।

तरजमा।

ऋषि राजाके अमात्यको यह बात बोलके शत्रुके नाश करणेवाला सो मणिका विषय चिन्ता करके कुश और यज्ञका काष्ठ आन्नेको गये। २९२।

अमात्य ऋषिके यह बात सुनके राजाके निकट जायकरके ब्राह्मण जो जो बात कहा, सो सब हाल राजाको कहते हैं। २९३।

राजा दुर्ज्जय अमात्यके मुखसे ब्राह्मणके सगर्व्व वचन सुनके बड़े क्रोधी होकरके नील नाम अपने अमात्यको बोलते भये, हे अमात्य! तुम शीघ्र जायकरके जेह प्रकारसे बने, यह प्रकारसे सो दुष्ट ब्राह्मणके निकटसे मणिको लय आवे। २९४।

अमात्य नील राजाकी आदेशके अनुसार बहुत सेनाको लयकरके वनमे ऋषिके आश्रमको जाता भया। २९५।

TRANSLATION.

293. Having said this to the courtier, the sage went to provide *kusa* and sacrificial wood, thinking of the virtue of the gem, in cutting off enemies.

294. The courtier, on the other hand, being thus told by the sage, went to the king, and related in detail all that the Brahmin had said.

295. Hearing the haughty words of the Brahmin, Durjaya was very wroth; and said to Níla, another courtier of his—"Go instantly to the wicked Brahmin, and anyhow bring the gem to me."

296. According to the king's order, Níla, with a large number of soldiers, went to the woodland cottage of the Brahmin.

অনুবাদ।

মুনিবর রাজামাত্যকে এই কথা বলিয়া শত্রুনাশক সেই মণির বিষয় চিন্তা করিতে করিতে কুশ এবং যজ্ঞীয় কাষ্ঠ আহরণার্থ গমন করিলেন। ২৯৩।

দূতও ঋষিকর্ত্তৃক এইরূপ আদিষ্ট হইয়া রাজসন্নিধানে গমনপূর্ব্বক ব্রাহ্মণ যাহা যাহা বলিয়াছিলেন, তৎসমুদায় অবিকল রাজার কর্ণগোচর করিল। ২৯৪।

রাজা দুর্জ্জয় অমাত্যমুখে ব্রাহ্মণের সগর্ব্ব উক্তি শ্রবণ করিয়া ক্রোধে পরিপূর্ণ হইয়া নীলনামক স্বীয় অমাত্যকে বলিলেন, হে অমাত্য! তুমি শীঘ্র গমন কর, ক্ষণকাল বিলম্ব করিও না, যে কোন প্রকারে হউক সেই দুষ্ট ব্রাহ্মণের নিকট হইতে মণি আনয়ন কর। ২৯৫।

নীল নরপতির আদেশানুসারে বহু সৈন্য সমভিব্যাহারে লইয়া ব্রাহ্মণের আরণ্য আশ্রমে গমন করিল। ২৯৬।

तरजमा।

अधुना प्राय करके सब देशका राजा, या धनवान आदमी हीरा आदि रत्नसमूह करके अङ्गकी भूषण बनावते भये, परन्तु पूर्व्वकालका राजा, या धनवान सब आदमी रत्न करके गृह निर्म्माण, देवताकी मूर्त्ति प्रस्तुत, देवताका पूजा और अनेक प्रकारका भूषण बनावते भये, पुराणादिक शास्त्रमे उसका बहुत प्रमाण मिलता है, तिसका उदाहरणके वरे कुछ पुराणकी वार्त्ता लिखते हैं।

राजा युधिष्ठिरकी सभाका वर्णन कहते हैं।

मय नाम असुर सम्पूर्ण द्रव्योंको बटोर करके स्वर्ग, मनुष्य-लोग और पातालमे प्रसिद्ध, अतुल्य आश्चर्य्य मणिका सभा बनाया। ३१२।

TRANSLATION.

Princes and rich men now-a-days use diamonds and other gems in ornaments ; but in ancient times, they used them in decking their houses, in making idols, in worshipping them, as well as in making ornaments. Many instances of this are found in the *Purāṇas* and other works; of which I cite the following instances :—

The Court of Yudhisthira.

312. The Asura made a court which stood unrivalled in the three worlds. It blazed with gems and was a marvel.

অনুবাদ।

এক্ষণে প্রায় সকল দেশের রাজা ও ধনী ব্যক্তিরা হীরকাদি রত্নদ্বারা ভূষণই প্রস্তুত করিয়া থাকেন, কিন্তু পূর্ব্বতন রাজগণ ও ধনিগণ রত্নদ্বারা গৃহাদি নির্ম্মাণ, দেবতাদিগের প্রতিমূর্ত্তি প্রস্তুত, দেবতাগণের পূজা এবং নানাবিধ ভূষণ ইত্যাদি কার্য্যে রত্ন ব্যবহার করিতেন, পুরাণাদি শাস্ত্রে ইহার অনেক প্রমাণ পাওয়া যায়, তাহার উদাহরণের জন্য এস্থলে কতিপয় পৌরাণিকী বার্ত্তা উদ্ধৃত করা গেল।

রাজা যুধিষ্ঠিরের সভাবর্ণন।

সেই অসুর তৎসমুদায় দ্রব্য আহরণ করিয়া স্বর্গ, মর্ত্ত্য ও পাতাল এই তিন লোকে বিখ্যাত অপ্রতিম, আশ্চর্য্য মণিময় সভা নির্ম্মাণ করে। ৩১২।

पुष्पितैः पङ्कजैश्चित्रां कूर्म्मैर्मत्स्यैश्च काञ्चनैः॥ ३२०॥

तर्जमा।

विश्वकर्म्मा यह सभाको नानाप्रकार उत्तम द्रव्य करके परिपूर्ण, बहु धन करके युक्त, रत्नका प्राकार करके वेष्टित और बहुत् प्रकार चित्र वस्तुसे चित्रित करके निर्म्माण करते भये। ३१७।

अतिबुद्धिमान् मयनामक दानव राजा युधिष्ठिरके-वास्ते जो सभा बनाया, तिसको सौन्दर्य्यसे श्रीकृष्णकी द्वारकाका सभा, इन्द्रके अमरावतीका सभा और ब्रह्माकी सभा पराभव मानते भये। ३१८।

मय दानव तेह सभामे लसुनियाका पातायुक्त, अनेक प्रकारका उज्ज्वल रत्नसे बनाया कमल करके शोभित अतुल्य कमलिनी बनावते भये। ३१९।

मय दानव यह सभाको सोणा और सौगन्धिक मणि करके चित्रित, नानाप्रकार पक्षी करके शोभित, सोणाका बनाया विकसित कमल, मछरी, कछुवा, इन सब करके शोभित करा। ३२०।

TRANSLATION.

317. Visvakarma, the Architect of the gods, furnished it with furniture of superb grandeur, filled it with treasures, enclosed it with a gemmed wall, and hung it all round with fairy pictures.

318. The court of Yudhisthira, made by the Danava Maya, beat hollow the court of Krishna at Dwaraka, the Amaravati of Indra, or for that matter, the court of Brahma himself.

319. Maya decorated the palace with lotus-plants, having leaves of cat's eyes, and bearing lotuses composed of lustrous gems.

320. He ornamented it with gold and *saugandhikas*, with birds of rich hues, and with full-blown lotuses of gold, fishes and tortoises.

অনুবাদ

বিশ্বকর্ম্মা এই সভাটী নানাবিধ উত্তম দ্রব্যপরিপূর্ণ, বহুধনসম্পন্ন, রত্নপ্রাচীরপরিবেষ্টিত এবং বহুবিধ চিত্রে চিত্রিত করিয়া নির্ম্মাণ করিয়াছিলেন। ৩১৭।

বুদ্ধিমান্ ময় দানব রাজা যুধিষ্ঠিরের জন্য যে সভা নির্ম্মাণ করে, তাহার সৌন্দর্য্যে শ্রীকৃষ্ণের দ্বারকার সভা, বা ইন্দ্রের অমরাবতীর সভা, অথবা ব্রহ্মার সভাও পরাভূত হইয়াছিল। ৩১৮।

ময় দানব সেই সভাতে বৈদূর্য্য-নির্ম্মিত পত্রবিশিষ্ট, বিবিধ উজ্জ্বল রত্নবিনির্ম্মিত অম্বুজ-শোভিত অনুপম নলিনী নির্ম্মাণ করিয়াছিল। ৩১৯।

ময় দানব সেই সভাটী স্বর্ণ ও সৌগন্ধিক মণিতে চিত্রিত, নানা পক্ষিসমূহে সুশোভিত এবং স্বর্ণময় প্রস্ফুটিত পঙ্কজ, মৎস্য ও কচ্ছপে বিভূষিত করিয়াছিল। ৩২০।

क्वचिद्रत्नमयी भूमिः क्वचित् काञ्चननिर्म्मिता।
स्फाटिकी राजती चैव यथायोगं कृता स्थली॥ ३२३।

तरजमा।

मय दानव तेह सभामे विचित्र स्फटिक मणिका सिढ़ीयुक्त, पङ्करहित जल करके पूर्ण, जैसे मन्द मन्द पवनको तरङ्गसे लहरी खेलते भयी, छोटी छोटी मोतिसे भरा महामणिकी बनायी वेदियुक्त और नानाप्रकारका मणि करके शोभित इस माफि एक कृत्रिम तलाव बनायी, जिस प्रकारसे अज्ञ आदमी उसको आसल तलाव मनमे करके देखनेसेभी उसमे गिरते भये। ३२१। ३२२।

राजा इन्द्रद्युम्नकी सभाका वर्णन कहते हैं।

सभाके कोइ स्थान बड़े मोलका रत्नसे, कोइ स्थान सोणेसे, कोइ स्थान स्फटिक मणिसे कोइ स्थान चांदीसे निर्म्मित भया; अर्थात् जेह जगहमे जिस रत्नकों देनेसे शोभा पाती है, तिस जगहमे तिस सब रत्नकों लागावते भये। ३२३।

TRANSLATION.

321-322. Maya made a wonderful tank, of which the steps were of excellent crystal. It contained small pearls; and was furnished with a raised platform of brilliant gems. The waters looked translucent, and seemed waving in the summer breeze. People (mistaking it for a real tank) tried to plunge in.

The Court of Indradumna.

323. Some parts of this court were filled with gems, some with gold, some with crystal, and the others with silver;—that is, all these were placed in their proper places, in order to effectiveness.

অনুবাদ।

ময় দানব সেই সভাতে বিচিত্র স্ফটিকের সোপানযুক্ত, নিষ্পঙ্ক সলিলপূর্ণ, যেন মন্দ মন্দ পবন-হিল্লোলে তরঙ্গাকুল, ক্ষুদ্র ক্ষুদ্র মুক্তাপরিপূর্ণ, মহামণিসম্বদ্ধবেদিকাযুক্ত এবং নানা মণিতে সুশোভিত এমন একটী কৃত্রিম সরোবরের আকার নির্ম্মাণ করিয়াছিল যে, অজ্ঞ ব্যক্তিবা তাহাকে প্রকৃত সরোবর জ্ঞান করিয়া সহসা তাহাতে আসিয়া পতিত হইত। ৩২১। ৩২২।

ইন্দ্রদ্যুম্নের সভাবর্ণন।

সভার কোন স্থান বহুমূল্য রত্নময়, কোন স্থান কাঞ্চনময়, কোন স্থান স্ফটিকময়,কোন স্থান বা রজতময় করিয়া নির্ম্মিত হইয়াছিল, অর্থাৎ যে স্থানে যে রত্ন দিলে সভার শোভার বৃদ্ধি হয়, তাহাই করা হইয়াছিল। ৩২৩।

अहिच्छत्रा पुरीका वर्णन कहते हैं।

शत्रुघ्न यह प्रकारसे नाना देशको घुम करके राजा रामचन्द्रके अश्वमेध यज्ञके घोड़ाको लयकरके ब्राह्मण आदि चारो वर्ण असंख्य मनुष्य करके युक्त, नानारत्न करके शोभित, सोणा और स्फटिक मणिका वनायी अटारी और सिंदरोजा करके शोभित अहिच्छत्रा पुरीमे जाते भये। ३४९। ३५०।

प्रसङ्गमे पूर्णभद्र यक्षकी पुरीका वर्णन कहते हैं।

हे अगस्त्य मुनि! पीछे पूर्णभद्र यक्ष स्वर्णकुण्डल करके शोभित, अपने प्रधान स्त्री यक्षिणीको आह्वान करके बोलते भये। ३५१।

TRANSLATION.

The description of the City of Ahichchhatra.

349-350. After passing through many cities, with the horse of the Asvamedha, Satrughna came to Ahichchhatra city, which was filled with people of the four castes. It was adorned with gems of various kinds, decked in gold and crystal, and furnished with palaces and gates.

The City of the Yakshya Purna-vadra, described incidentally.

351. O Agastya, thereupon the Yakshya Purnavadra called in his principal wife, decked in golden pendants; and said—

रासमण्डलका वर्णन करते हैं।

हे व्रज! अमूल्य रत्नसमूहके स्थान, असंख्य हीरा, माणिक और कौस्तुभ आदि मणि करके अति सुन्दर, चौड़ाइमे कोटि योजनके प्रमाण, दीर्घाइमे उसके सौ गुण विरजा नदी रासमण्डलका चारो तरफ मण्डल किये है। ३८७। ३८८।

TRANSLATION.

384—386. O Dwijas, the grandfather of all, Brahmá, made Jagannátha sit at the door of the house, ornamented with gemmed pillars, and mirrors, with the view of installing him. After sprinkling him with the sacred waters taken out of gemmed pitchers, he installed him on a throne of "royal state"—for bringing people.

Description of Rása-mandala.

387—388. O Vraja, thou art the mine of precious gems,—thou art ablaze with no end of diamonds, rubies, *kaustuvas*, &c.; thou art ten millions of yojonas in breadth and long a hundred times in breadth.—The river Virajá surrounds thee.

অনুবাদ।

হে দ্বিজগণ। সর্ব্বলোকপিতামহ ব্রহ্মা রত্নস্তম্ভযুক্ত, রত্নদর্পণসুশোভিত প্রাসাদের দ্বারদেশে অভিষেকের জন্য জগন্নাথ দেবকে উপবেশন করাইয়া রত্নকুম্ভপূর্ণ সুবাসিত তীর্থবারিতে স্ত্রী-পুরুষসূক্ত মন্ত্র দ্বারা অভিষিক্ত করিয়া লোক সংগ্রহের নিমিত্ত রমণীয় রত্নসিংহাসনে স্থাপন করিলেন। ৩৮৪। ৩৮৫। ৩৮৬।

सो सब गृह अमूल्य रत्नके भूषणसे शोभित और उत्तम वस्त्रसेभी विभूषित राधाके तिन कोटि दासी और रक्षक-समूह करके रचित है। ३९१।

हे व्रज। सो समुदाय गोपगृहका वीचमे रासमण्डल गोलाकार, देखनेमे चन्द्रमाके बिम्बके समान मनोहर, अमूल्य रत्न करके बनायी, दश योजन विस्तीर्ण, फल और पल्लवयुक्त, मङ्गलघटसमूह करके आवृत और उसको चारो तरफ रमणीय हीराके हारसे शोभित होती भयी।३९२।३९३।

TRANSLATION.

389. The *Rása-mandala* was surrounded by a thousand millions of houses of excellent gems, for the accommodation of the milk-maids.

390. These houses were ablaze with gemmed lamps. They were furnished with floral beds. They were sick with the odour of incenses of various kinds; they were hung round with garlands of flowers, and with gemmed mirrors.

391. In addition to the guards appointed for the purpose, thirty millions of maids belonging to Rádhá, decked in gemmed ornaments and clad in beautiful clothes, kept watch and ward over them.

392-393. O Vraja, the *Rása-mandala* situated in the midst of these houses was round; and looked fine like the image of the moon in water. It was decked in excellent jewels. It measured ten *yojanas*; it was furnished with sacred pots, filled with fruits and leaves, and with beautiful chains of diamonds.

অনুবাদ।

সেই রাসমণ্ডলস্থ প্রতিমন্দির অমূল্য রত্নে নির্ম্মিত শতকোটি গোপমন্দিরে পরিবেষ্টিত ছিল। ৩৮৯।

সেই সকল গোপগৃহ রত্নপ্রদীপপ্রোদ্ভাসিত, পুষ্পশয্যাসমন্বিত, নানাবিধ সুরভি ধূপ, ও সুগন্ধ, রমণীয় পুষ্পমাল্য গন্ধে আমোদিত এবং রত্নদর্পণে সুশোভিত ছিল।৩৯০।

সেই সমুদায় গৃহ অমূল্য রত্নাভরণে ভূষিত, উত্তম বস্ত্রে পরিশোভিত রাধার তিনকোটি দাসী ও রক্ষকসমূহে রক্ষিত হইত। ৩৯১।

হে ব্রজ! সেই সমুদায় গোপমন্দিরের মধ্যস্থ রাসমণ্ডল বর্ত্তুলাকার, দেখিতে চন্দ্রপ্রতিবিম্ব সদৃশ মনোহর, অমূল্য রত্নসমূহে বিরচিত এবং দশ যোজন বিস্তৃত, ফলপল্লববিশিষ্ট মঙ্গলঘট সমূহে আবৃত এবং তাহার চতুর্দ্দিকে রমণীয় হীরকহারে বিভূষিত হইয়াছিল। ৩৯২। ৩৯৩।

हे शत्रुघ्न! तोमारा कन्दर्पके समान शरीरमे सोणेका कवच और मणि करके विभूषित मस्तकमे आपन तेजसे अन्धकारको नाश करणेवाला हीरा करके खचित पागड़ी धारण करो। ४१८।

सुमद राजाके वर्णन कहते हैं।

शत्रुघ्न समुदाय सेनाको और मन्त्री गणको लयकरके प्रशस्त माणिक, मोति और बहुत् मोलका द्रव्य समूह करके शोभित वीरप्रधान सुमदनामक राजाकों दर्शन करते भये। ४१९।

TRANSLATION.

Instructions of the sage, Vátsayana, to Satrughna.

418. O Sátrughna, on your fine body, like that of Kandarpa, wear golden amulets;—and on your head, decked in gems, a turban studded with darkness-destroying diamonds.

Description of king Sumada.

419. Satrughna, accompanied with his ministers and forces, saw the valorous king, Sumada, dressed in excellent pearls, rubies and other ornaments.

অনুবাদ।

শত্রুঘ্নের প্রতি বাৎস্যায়ন মুনির আদেশ।

হে শত্রুঘ্ন! তোমার কন্দর্পসদৃশ মনোহর শরীরে স্বর্ণের কবচ এবং মণি-বিভূষিত মস্তকে স্বতেজে অন্ধকারবিধ্বংসী হীরকখচিত শিরস্ত্রাণ পরিধান কর। ৪১৮।

সুমদ রাজার বর্ণন।

শত্রুঘ্ন সমুদায় সৈন্য ও মন্ত্রিবর্গের সমভিব্যাহারে প্রশস্ত মাণিক্য, মুক্তা ও বহুমূল্য দ্রব্যজাতে সুশোভিত, বীর সুমদ-নামক নরপতিকে দর্শন করিলেন। ৪১৯।

SACRED JEWELS.

Ancient and Modern Jewelry.

IN all countries, gems, set or unset, were dedicated to the gods. Mention of jewels has been frequently made in the Bible. The breast-plate of Aaron, the High Priest, was adorned with twelve stones. Epiphanius says that when the Jewish High Priest entered the *sanctum sanctotum* on the three great occasions (the Pascha, Pentecost and the Feast of Tabernacles), he wore, suspended over the breast-plate, the "Urim and Thummim," which he (Epiphanius) translated by the word "Declaration," because the *Adamas* of a cerulian color (by which our Sapphire is meant), of which it consisted, *declared*, by change of color, the pleasure or displeasure of Jehovah towards his people. The breast-plate was named by the Greeks, the "Oracle of Judgment." It was in the form of a span, 8 inches square, and had the stones set thereon in four rows, in the following order:—

1*st Row.*—Sardius, red; Topazius, yellowish green; Smaragdus, bright green.

2*nd Row.*—Carbunculus, red; Sapphirus, blue; Jaspis, green.

3*rd Row.*—Ligurius (Lyncurium), yellow; Achates, black and white; Amethystus, purple.

4th Row.—Chrysolithus, yellow; Onyx, blue and black; Beryllus, pale green, or pale blue.

The names of the twelve tribes of Israel were engraved, each on a separate stone, in the national character (by which, perhaps, the "chaldee" is meant), with the object of securing divine protection. This breast-plate was taken over to Rome, along with the other spoils of the temple, by Emperor Titus, and was there deposited in the Temple of Peace. According to some, all the spoils were sent off by Genseric to Carthage, when Rome was sacked, and were said to have been drowned with the ship that carried them away. Others say, that these were taken back from Carthage, (where they had been really sent), and deposited by Justinian in the sacristry of St. Sophia; but, seized with the fear of having committed sacrilege, he sent them off to the Christian Church of the Holy Sepulchre, Jerusalem. The story continues, that when the Holy City was taken by Chrosroes II of Persia (in 615), he took the breast-plate away to his own country, where, there is reason for thinking, it may still be found buried in some of the treasuries of the old capitals. In his vision of "the Holy City, New Jerusalem, coming down from God out of Heaven, prepared as a bride adorned for her husband," St. John describes her walls as built out of *twelve* courses of precious stones. The arrangement was as follows:—

1, Jaspis, dark green. 2, Sapphirus, blue. 3, Chalcedon, a greenish blue sort of Emerald. 4, Smaragdus, bright green. 5, Sardonyx, red and white. 6, Sardius, bright red. 7, Chrysolite, golden-yellow. 8, Beryl, bluish green. 9, Topazius, yellowish green. 10, Chrysoprasus, apple-green. 11, Hyacinthus, blue. 12, Amethyst, violet or purple.

Certain stones have been dedicated to the deities by engraving their figures upon them. For example, the splendid pyramidal Amethyst, in the Besborough cabinet, has been thus consecrated to Serapis; a nicolo of an extraordinary size was dedicated to Juno. Pompey consecrated to Jupiter the rarest minerals found in the treasury; Cæsar dedicated six caskets of his selected rings to Venus; and Marcellus gave another to the goddess of Peace; Livia Augusta dedicated in the Capitol, the largest block of crystal ever seen. The custom of dedicating also obtained in the Middle Ages.

Gems are in use from time immemorial. It is mentioned in the Talmud that Noah had no other light in the Ark than that which was produced by the precious stones he had by him. Abraham, it is said, being jealous of his many wives, confined them in an iron prison, whose walls were so high as to exclude all light of the sky; and in order to supply them with light, he placed with them a large bowl studded with precious stones, which illumined the whole place. The grandeur of the

feast of Cleopatra is perhaps unparalleled in ancient history The banquetting hall in which Cæsar was feasted struck his admiration Everywhere were seen "columns of porphyry, ivory porticos, pavements of Onyx, thresh holds of tortoise shell, in each spot of which an Emerald was set, furniture inlaid with yellow Jasper, couches studded with gems' Cæsar himself was the possessor of splendid jewels The cedar ships built by Caligula had their sterns inlaid with precious stones Incitatus, his favorite horse, wore a collar of Pearls The golden house of Nero had pannels made of mother-o' pearl, enriched with gold and costly gems At the great games instituted by him, among other things, Pearls and precious stones were daily thrown away to the people, as lottery prizes Lollia Paulina, the wife of Caligula, was known to have dressed herself, on the occasion of a supper of ordinary betrothals, with jewelry to the value of £336,000 sterling A pin that had belonged to the Empress Sabina was found in the ruins of Pompeii and Herculaneum, and is now to be seen in the Museum of Naples Sabina, the younger, possessed a pair of garters, which on account of the rich cameo clasps, was estimated at £40,000 A relic of the 12th century is still to be found in England It is the grace cup of Thomas a-Becket The cup is of ivory, with mountings of silver, the upper and lower parts being studded with gems The inscription round the cup is "Vinum tuum

bibe cum gaudio,' i e, "Drink thy cup with joy," but round the lid, is the restraining injunction, "Sobru estote," with the initials T B, interwoven with the mitre Eleonora of Provence, the wife of Henry III, (13th century), possessed a vast amount of jewelry "The coronation present given her by her sister, Queen Margaret of France, was a large silver peacock, whose train was set with Sapphires and Pearls, and other precious stones wrought with silver This elegant piece of jewelry was used as a reservoir for sweet waters, which were forced out of its beak into a basin of silver chased" The Spaniards and Italians of the 14th and 15th centuries were famous for their extravagance in apparel, loaded with gold and gems From the time of Francis I to that of Louis XIII of France, the major portion of the jewels worn consisted of Pearls and colored gems It was not until the death of Maria Theresa of Austria, that brilliants came to be the fashion The scarf, or Spanish mantilla, worn by Catherine of Arragon, at her wedding had a border of gold, Pearls and precious stones When Henry VIII met his bride, Anne of Cleve, he was dressed in a coat of purple, studded all over with Diamonds, Pearls, Rubies, &c The dress of the bride was "a gown of rich cloth of gold, embroidered very thickly with great flowers of large Orient pearls' The dress of Queen Mary, when she was married to Philip of Spain, was a robe brocaded on a gold ground, and had a long

collect the best specimens of Diamonds, and to prepare a necklace therewith, for presentation to his favorite Madame du Barry But before the necklace was complete, the unfortunate King breathed his last But the jeweller finished the necklace, (valuing it at £72,000 sterling), in the hope of selling it to Louis XVI The new King refused to purchase it, saying that a ship was more necessary than a necklace Consequently, the jewelry remained in the hands of the makers till events came to pass in which the Queen Maria Antoinette, Louis, Prince Cardinal of Rohan and one Madame Lamotte were involved Struggling for a long time for the bare necessities of life, Jeanne de St Remy daughter of Chevalier Baron de St Remy of the blood royal of Valois, managed at last to marry a noble man of the name of Lamotte, and came up with her husband to Paris, where she procured an interview with the Cardinal and flung herself on his protection But his Eminence little knew the viper he was nourishing in his breast Madame Lamotte was an adventuress of the boldest stamp Taking advantage of the confidence placed upon her when she was informed by the Cardinal of the displeasure he had incurred of the Queen, when he was requested *to introduce her to Her Majesty*, she devised a plan, the *denoument* of which was the sensation of whole Europe at the time She imposed on the credulity of the Cardinal by mentioning to

him the steps she had been taking to restore him to the favor of the Queen, had forged letters addressed to him, as coming from Her Majesty, had forged orders given to him, commanding certain money payments, on behalf of the Queen, had procured for him an interview with the Queen, who was personated by a friend of the Madame, and at last made him negociate for the Diamond necklace, on behalf of Her Majesty, who wanted to have the transaction kept a profound secret, and who wished the Cardinal, by a power forged in Her name, to arrange for the payment of the money by certain instalments Of course, the Queen was in supreme ignorance of the audacious way in which her name was being used, and the Cardinal, in his blind eagerness to regain royal favor, never suspected the tricks that were being played with him. The necklace was in the meantime taken away to London, where it was sold by pieces, the money obtained by the sale being deposited in the Bank of England under a false name The time for the payment of the first instalment came, but Madame contrived to ward off the payment, by offering a small sum on account, and gained a month's time, in order to make her security doubly sure But the clever part she played throughout was soon to be brought to light The jewellers complained of the delay in payment to the Queen Herself, who expresed Her genuine surprise at all that had happened The Cardinal was arrested and put into the Bastile, so were

Madame and her confederates The Cardinal was, however, found innocent and let off, and subsequently exiled Madame Lamotte was sentenced to be flogged, branded on both shoulders and imprisoned with life When the first part of the sentence was carried out, she made the basest calumnies against the Queen and the Minister Her husband, when condemned for conspiracy, threatened to publish a pamphlet wherein the character of the Queen and the Minister would be revealed It is strange that Her Majesty, whose moral character was above the breath of scandal, should have ordered the release of Madame after ten months and allowed her to escape to England, where a large sum of money was sent to purchase the silence of the clever pair But this bribe was, in a manner, refused, for, though the Memoir of Madame Lamotte was burnt, a second copy was soon after published Copies of this scandalous Memoir were, it is said, found in the Palace of Versailles, and taken possession of by the Republican Government and are now to be found in the State Library of Paris This unfortunate affair, in the reign of Louis XIV, put a damper on the taste for jewelry which had so far increased during the preceding reigns The Revolution of 1789 stamped out the last vestiges of the passion for precious stones The time of the Directoire was characterized by the revival of the Greek and Roman fashions with regard to dress, manners, arts, and fashions With the Restoration,

Diamonds, which had been superseded by Pearls, became the fashion ; and all the lost forms of using precious stones, came back to use. France truly boasts of elegance and taste as displayed in the collection and making of jewelry, to a degree which other nations have found it impossible to attain. A list of jewelry belonging to a rich nobleman, taken in 1828, shows that the art belonged to the eclectic school, *i. e.*, the fashion was not copied from any period but borrowed from every age and country.

Among the many ornaments used by the ancients and brought down to the present times, may be mentioned the rings, ear-rings, bracelets, chains, necklaces, brooches, clasps, diadems, girdles, hair-pins, aigrettes, &c. The Mexicans, Peruvians, and the Oriental nations have delighted in boring their nose, cheek, and chin for hanging jewels thereon. The ladies of Bagdad, according to Tavernier, wore a collar of jewels round the face, as well as nose-jewels. The Arab women put in the cartilage of the nose a ring, so large as to encircle the mouth, and to prove no obstacle to the passing of food into it. The Indian courtesans bore their nostril and wear in it a ring set with precious stone. The women of Lars and Ormuz pierce the upper portion of their nose, the bone itself, and pass through the hole a hook that fastens a sheet of gold shaped to cover the nose, and enriched with Rubies, Emeralds and Turkoises. The princes and

princesses of the Mahomedan blood royal, use, as the badge of their position, two poniards at their belt The daughter of the Duke of Alba, one of the maids of honor to the Queen of Spain, always carried a pistol fastened to her side, of finely polished steel and ready for execution

The collar, chain, and necklace are of a highly classical origin and had been extensively used by the Medes, Babylonians, Egyptians, Hebrews, Greeks and Romans Gold collars were given by the ancient Romans to their auxiliary troops and to strangers, as rewards for military prowess, silver ones, to the citizens But subsequently, the metal used was in accordance with the nature of the position or deeds of the fortunate recipient The golden collar in use among the Gauls and the Romans was an insignia of knighthood Collars are even now used for the same purpose, the chains to which the different Orders are hung, being called the *collars* of the Order, for instance, the collar of the Holy Ghost, of St Michael, &c The chain was regarded in the East as a badge of honor, and an insignia of authority given by the king Joseph was invested with this honor by Pharaoh, and Daniel by Belshazzar In Persia, no man could wear a chain unless he was in office and unless it was bestowed by the king In the reign of Muirheanhoin, the Irish gentlemen only wore a chain of gold round their neck, by command of the king The corps of Edward the Confessor on being

opened in the reign of James II, was found to have under one of the shoulder-bones, among various other things, a gold chain, 24 inches in length. Noblemen were in the habit of wearing heavy gold chains, in the Middle Ages, and down to the 17th century. As items of feminine ornaments, the chain and the necklace were used even in the most remote ages. The wealthy Roman ladies used chains (of gold or silver) round their waists and throats; the poorer ones, of copper. Necklaces came into fashion, in France, in the time of Charles VIII, when he presented one of his Diamonds to his Mistress Agnes Sorrel. The Satin-stone necklace was profusely worn at the time of the Restoration. The Pearl necklace of the present Queen of Prussia and Empress of Germany is a thing of great interest, and will be more so, if preserved unbroken. On the first anniversary of her birth-day, after her marrige, she received the present of a magnificent Pearl from her royal husband; and since that time she continues receiving a similar Pearl on the same occasion. The Pearls so collected have enabled her at the present time to get a necklace formed that encircles her bosom *and falls down to the waist. According to a custom* coming down from time immemorial, the bride of the Emperor of France is presented by the City of Paris with the gift of precious stones. A necklace, consisting of splendid Diamonds, had been accordingly prepared for the Empress Eugènie, but

the people were greatly disappointed, when She expressed a wish that She preferred to the gift an educational institution for poor girls of the Fanbourg St Antoine This building called the Maison Eugènie-Napoleon, was formally opened on the 1st January 1857 The custom of wearing a cross, of gold or set with gems, can be traced back to the 16th century The fashion was revived in the 18th century Clasps were formerly used by the Military men, to fasten their mantle with, but the fashion was generally taken to in the 3rd and 4th centuries, when the use of the toga was dis continued The Roman women wore gold chains, collars, necklaces, bracelets, ear rings, rings, diadems, fillets, clasps, hair pins and ankle bands

The Greeks, Romans and Jews used the girdle In the Middle Ages, the bankrupts had to surrender their girdles in open court, as the signal for their insolvency, the belt in those days serving the same purpose as the pocket or purse does in the present time In those days, a knight was considered a traitor, if he was publicly divested of his belt There was once in Paris a duty, levied on the people every three years, known as the Queen's girdle, which was required for meeting the household expenses of Her Majesty Caliph Motavakel instituted, in the Hejira year 235, the Christian's girdle, to be worn by all Christians throughout the East The Diamond girdle of Dona Isabel II, Queen of Spain,

warded off the thrust of the dagger with which an assassin intended to stab her.

The crown was considered in the most ancient times more as a badge of divinity than of royalty. The first mention of it in the Bible is in the Book of Samuel, when the Amalekites brought Saul's crown to David. The first diadems, worn only to represent temporal power, were, perhaps, narrow fillets, tied round the temples. Crowns were next used as signals of victory, joy, sorrow, &c. In these cases, they were made of branches of trees and of flowers. In Rome, the Magistrates sat, on public occasions, crowned with diadems of olive or myrtle. P. Claudius Pulcher, the Roman Consul, introduced, according to Pliny, the custom of gilding the circlet of the crown. Finally, the gold crown came into use. Among the military crowns, the mural, civic and naval crowns were made of gold. The triumphal crowns, originally of laurel, were finally transformed to gold. Heleogabalus was the first to use Pearls in the fillet round his temple. About the 10th century, kings, dukes, earls, &c., wore a crown or golden circlet. The celebrated iron crown of Lombardy is, in fact, one of pure gold. Its narrow iron circlet is said to have been formed out of the nails with which Christ was crucified. This is put inside the crown. Theodelinda, upon her marriage with Agilulph, Duke of Turin, presented her husband with this crown, which is still worn by

all kings of Italy It was kept near Milan, in the treasury of the monastery of Monza The first crown worn by a Frankish king was the one sent to Clovis by the Emperor Anastatius, together with the diploma of Consul This crown was made of gold and studded with precious stones The crowns of the ancient Mexican kings were in the shape of a mitre of gold Three specimens of the Roman art are still in existence, which deserve mention, not on account of their excellence in workmanship, but for their rarity and for the histori cal interest they possess

(1) The eight crowns which some labourers digging a place near Toledo came across in 1858 They were set in gold and studded with gems, the value being computed at £2,000 They are now to be seen in the Musee de Cluny, Paris Of these the most important is the crown of king Receswinthus (653), a broad circle of fine gold, 8 inches in diameter, and set with 30 extraordi nary Pearls, interspersed with as many fine Sapphires There is a magnificent Latin cross, set with 8 Pearls as big as cherries, attached to it The second crown said to have belonged to his Queen, is set with Emerald, Sapphires, Opals, Pearls and Crystals, &c The other six were coronets set with inferior stones

(2) The crown of Charlemagne Charlemagne was crowned Emperor of the West by Pope Leo on the 25th December, 800 His crown was perhaps,

manufactured in Rome; and its workmanship bears evidence of the Byzantine style. It is octagonal in shape, formed by 8 plagues of gold with round tops, each alternate plague bearing the figure of a saint in enamel. Above all is a Greek cross set with large stones. When Charlemagne was canonized in 1166 by Frederic Barbarossa, his crown was taken out of the grave. It is now to be seen in the Imperial Library of Vienna.

(3) The crown of Hungary. It is a relic of the regular Byzantine art, and is formed by a broad flat band of fine gold, from which springs an arch supporting a cross. Four portraits in enamel are set in the springing of the arches which close the top of the crown. There is also a medallion of Christ attached to it. Queen Elizabeth of Hungary pledged this crown with the Emperor Frederic IV, and the deed by which it was executed, enumerated the number of stones it contained—53 Sapphires, 50 Rubies, one Emerald, and 320 Pearls. Its present whereabouts are unknown.

Ear-rings played an important part in the jewelry of the ancients. With the Hebrews, the name signified "roundness," and their use was confined to the women. The Illiad mentions Juno as adorned with pendants in the ear. The Athenians considered boring the ears of men a sign of nobility; the Hebrews and Phœnicians and Arabs, the symbol of slavery. With the Arabians the expression, "to have a ring in one's ear," means "becoming a slave." The

ancient ear-rings of Egyptians, as seen in the sculptures, were of a circular form. Persons of high rank sometimes used ear-rings shaped like asps, made of gold, and set with stones. Silver ear-rings have been found in Thebes. It is said that when Eve was banished from Paradise, she had, as a sign of slavery, her ears bored. Expensive Pearl-ear-rings were worn by the Roman ladies. Those of the Empress Poppæa were worth three million francs; those of Cæsar's wife, six millions. The Grecian children wore ear-rings on the right ear only. In India, this ornament is used by both the sexes. The title of the Emperor of Astracan is, among other things, "Possessor of the white Elephant and the two ear-rings." In South America, the Incas wore the ear-rings as badges of knighthood. Keys were at one time used as ear-ornaments in England, where also ear-rings were used even in the reign of Queen Elizabeth. Shakspeare had his ears bored and ornamented with them. The pictures of Henry II and III of France and their attendants show that they were extensively used in those periods. Sailors and other people of the lower class in the Continent are still in the habit of using ear-rings.

Speaking etymologically, the ornament worn on the arm is called a bracelet (Latin *brachiale)*, but it generally signifies any circlet worn on the wrists; that on the arm above the elbow, is known as the armlet. In the Eastern countries, the former is worn by women, the latter by men, and is there

considered as a token of royalty. Both are ornaments of the highest antiquity. The bracelet was worn by Judah, who was the head of a tribe; the kings of Persia presented it to all ambassadors from foreign courts. The Egyptian kings, as well as the Egyptian women, wore armlets. Bracelets were used in Greece much later than rings. Mention is made of them in several places in the Bible. Among the Romans, they were considered as marks of honor, and when made of brass or iron, as symbols of slavery. But they were on no account worn by unmarried females, not at least before they were betrothed. The Sabine warriors, according to Titus Livy, wore them on their left arms. In the Pompeii was found the body of a lady having two bracelets on one arm. In Pliny's time, the men were in the habit of using bracelets of gold. The Emperor Maximilian (the successor of Alexander Severus), who was 8 feet and 1 inch in height, used his wife's bracelet as a thumb-ring. The bracelets worn by the Roman women were sometimes shaped in the form of a serpent, or in that of a rope, or round braid, serpents' heads representing the two ends. They were also used by men as rewards for military prowess. The Gauls used heavy gold armlets and bracelets. Among British kings, the emblems of authority wore gold bands, worn on the neck, arms and knees. King Edgar was mentioned in the *Saxon Chronicle* (965) as the bestower of heroes, *i.e.*, the rewarder of valor. The Norwegians, Gauls,

Celts and Saxons also considered the ornaments as the reward of bravery These were also used by the Normans and by the savages of Oceania These were used in the 13th century to be offered to the deity The ancient Mexican and Peruvian kings possessed a good number of them The best specimens of armlets of the present day are to be met with in the regalia of the Persian kings The celebrated *Koh i noor* was once used by Runjeet Sing in an armlet

Of all the ornaments used, rings appear to be the oldest They have, in some country or other, been meant to symbolize faith friendship, command, rank, honor, slavery, &c, &c The Bible makes mention of rings in several passages When Pharaoh made over the government of Egypt to Joseph, he gave him his ring, taken off his finger, as a mark of the command he vested in him Among the Hebrews, the finger rings were primarily used as stamps of genuineness of letters and documents So with the Babylonians Being used for this purpose, they were called *tabaoth*, which signifies "to imprint and also to seal' They were usually worn on the little finger of the right hand From Babylon, the fashion was adopted by the Medes and Persians, and therefrom it was transmitted to the Greeks and Romans The Greeks called this ornament by a name which denotes finger, the Romans, from the word *ungula*, *i e*, nails,—it being used by them,

Appendices.

The Properties of Precious Stones.

MINERALOGY is that science which makes us acquainted with the unorganized portions of the earth; while Zoology and Botany give us the knowledge of the organized parts, namely, animals and plants. By the term organized are meant those objects which consist of several different parts, all varying with one another in regard to their structure, position and functions, but so constituted that if you take away one, the body to which it belongs would be destroyed or at least rendered incomplete. For instance, if you take away the stomach or muscles from animals, or the root from plants, their existence would be well-nigh impossible. By unorganized substances are meant those things which, if broken asunder, will represent, in one bit, the very same properties as in another. Under this head come the Minerals. They are characterized by four distinct properties, *viz.*, external, optical, electrical and chemical. The first may be subdivided into six parts;—form, hardness, lustre, diaphaneity, color and weight.

Besides the regular or crystalline form, (which is to be found in a variety of shapes), some Minerals, which do not crystallize, take definite forms externally. The surface of some, for instance,

consists of portions of spheres of different dimensions, when these are small, the mass is called *botryoidal,* from the Greek word *botrus,* a cluster of grapes, which, when closely pressed together, it somewhat resembles When the globular surfaces are of larger dimensions, it is then called *mamillated,* (Lat *mamma,* the breast), as the chalcedony The nodules of iron pyrites, which show a surface like that, but on a smaller scale, are known as *reniform,* (from Lat *ren,* a kidney) Those substances which crystallize display their regular structure, when broken, but those which do not yield to cleavage, break into indeterminate bits—the forms of the fragments being determined by the texture of the Minerals The best example of the *conchoidal* fracture is to be found in the breaking of a large flint pebble In other substances, which are less hard and compact, the fracture will be even or earthy

The term hardness, as applied to Minerals and precious stones, does not signify "difficulty of breakage," but the resistance they offer to the mechanical pressure of another,—their liability or non liability to scratch It is different from tenacity which signifies their power of resisting a blow The Diamond—the hardest substance known—and next to it the Sapphire, are so brittle that the blow of a hammer can easily break them into pieces, but other stones, which are soft and can therefore be easily cut or scratched, offer great resistance to

blow The degree of tenacity depends upon the elasticity and structure of the stones The following is the scale of hardness, devised by the German Mineralogist, Moh, who has, it will be seen, taken *ten different substances as standards of the various* degrees, under which all minerals should come—the last being the hardest body known

1—Talc 2—Rocksalt 3—Calcspar 4—Fluor-spar 5—Apatite 6—Felspar 7—Quartz 8—Topaz 9—Sapphire 10—Diamond

The degree of polish being regulated by the degree of hardness, Diamond is susceptible of receiving and retaining the best polish It is this property in the stones that has preserved them from the ravages of time and has enabled us to come across jewels, handed down from generation to generation, even from the catacombs of Egypt and the ruins of Pompeii and Herculaneum

The lustre which precious stones possess is known by a variety of names, classed by the Mineralogists under the following designations —

Adamantine—Showing the brilliance of the Diamond

Vitreous—Resembling the surface of glass

Resinous—Shining as if rubbed with an oily substance

Pearly—Showing the lustre of the Pearl as often observed on the bases of prismatic crystals

Silky—Having a fibrous reflection similar to silk

The names of the different degrees of brilliance are,—splendent —the highest degree, (almost exclusively applied to Diamond), brilliant, shining, glistening or glimmering There are some soft Minerals, which become lustrous when scratched by a sharp point

Many stones are gifted with the power of transmitting light The different degrees of Diaphaneity are classed as follows —

Transparent—When objects can be distinctly seen through a stone

Limpid—When it is colorless

Semi transparent—When indistinct outlines of objects are seen through it

Translucent—When light only is transmitted but objects are not seen through

Semi translucent—When translucent at the edges

Opaque—When no light is transmitted

The opacity is sometimes the effect of intermixture with foreign substances, or of decomposition, loss of water, &c

The color is no doubt one of the external properties of Minerals or precious stones, though it is the effect of chemical composition Color is an important consideration in the identification and valuation of gems In some Minerals, the color is essential to them, as in the Sulphurets, Oxides, &c, in others, it is the result of intermixture of substances in species which are originally colorless, as in the marble or jasper in which the various

shades of red and yellow are due to the presence of the oxide and pyrous oxide of iron In some gems the color becomes so intense, in its variety, as to be often called by another name, when seen in a mass To describe the true color of a Mineral, we should therefore specify that hue to which it would turn when reduced to powder Such inter mixtures of coloring matter as are merely mecha nical render a Mineral more or less opaque, as the varieties of chalcedony—red and yellow jasper are highly translucent, or sometimes semi transparent, though they are colored by particles of oxide of iron which are themselves opaque But such colors as are the effect of chemical combina tion never affect the transparency of gems, for instance, the violet tint of Amethyst, which is due to the minute particles of the oxide of Manganese, and Quartz, and the green of the Emerald, caused by the presence of oxide of chrome The variety of the shades of color is attributed to the variable quantity of coloring matter in the Minerals, as blood red, flesh red, chestnut-brown, sky-blue, &c Accidental colors produce streaks and clouded forms, such as are seen in Agates Sometimes, they take the shape of leaves and moss, or veins, as in the Marble There are other colors which are neither inherent in stones nor produced by combination, for instance, the sulphuret of anti mony, which displays on its surface a brilliant tarnish in which the colors of the prism are

arranged in order. Prismatic colors are sometimes seen in the interior of transparent objects, and are caused by the presence of minute fissures containing particles of air. These can, however, be removed by a little pressure. The color of a stone often changes its commercial name. The red Sapphire is a Ruby; the yellow one, a Topaz; the green Chrysolite, a Peridot, &c., &c. Some gems exhibit two or three colors in the same specimen, this peculiarity, called *polychroism* (Gr. *polus*, many, and *chroa*, color), is observable in some stones, (the Tourmaline, for example,) placed between the eye and light. If the texture and composition of a stone be the same all through, it will exhibit but one color, —provided it is crystallized in the cubic system. The peculiar light displayed by some Minerals by friction or heating, is called *Phosphorescence*. The rubbing of two bits of quartz against each other will produce a greenish light. Some Minerals display a green, others, a pale violet light, when placed on a heated shovel. The variable lustre observed in the star-stones is said to proceed from an imperfection in their crystallization. Sun or gas light shows these reflections to great advantage. Some stones transmit a different color when looked through or looked at, as the Opal and Tourmaline.

In order to pick out real gems from spurious ones or from other gems similar to them in color and structure, an accurate knowledge of their

specific gravity is necessary. This knowledge was possessed by the ancients, and was carried into practice in India several centuries back. A simple way of ascertaining the specific gravity of any gem is given below :—

"The stone of which the specific gravity is to be obtained, is first weighed in the ordinary manner in the scales, and having noted the exact weight, it is then fixed by means of a piece of wire bent in the form of a hook, and a small piece of wax to one side of the scale, whilst in the other is placed a piece of wire and a piece of wax of the same weight, or their equivalent in weights. The scale, with the stone attached, is now allowed to fall in a cup of distilled or even filtered water, and weights are put in the opposite scale till the weight of the stone is counter-balanced, and the scales exactly even. It is evident that a less weight is required to counter-balance the stone submerged in water, compared with that when it was weighed in the air, as the water in some measure supports it. The weight in the water is then subtracted from the weight in air, and the weight in air divided by the difference, *viz* :—

Weight in air	...	...	17 carats.
Ditto water	...	...	12 „
			5–17=3·5'."

For this purpose, "the substance to be examined should be interposed between the two reflecting plates, when so arranged that the original ray refuses to be reflected, in which case, should the body be doubly refracting, a position will be found in which a great portion of the previously intercepted light will be more or less transmitted." Light may be polarized in a variety of ways; such as, by reflection at a certain angle, from a polished surface, by transmission through plates of Tourmaline, *Iceland spar, or other doubly refracting* bodies

Electricity is the property which some substances possess of attracting and repelling smaller bodies. This can be excited, either by friction, pressure or heat, or, as in some, by all these methods Some Minerals are conductors, and others, non conductors of electricity. "A Topaz, a Tourmaline and a number of other Minerals, when rubbed on a piece of woollen cloth, will, like a stick of sealing-wax or glass rod (so excited), attract small light bits of cotton or thin paper But the metals and those ores which approach to a metallic state, being conductors of electricity, this result cannot be obtained unless they are previously isolated, by placing them on a support of glass or some other non-conducting substance. A very small piece of gilt paper attached by a silk thread to a bent glass rod, forms a simple apparatus which will exhibit the electricity a Mineral has thus acquired:

on approaching it to the gilt paper, it will immediately attract it" Electricity is either positive or negative, or, as it is sometimes called, vitreous or resinous The amount of time for which some Minerals retain the electricity, helps one in a great measure to establish their identity Many scientific instruments are in use, to determine the electrical properties of stones, but the simplest plan would be "to use an ordinary electrometer, and to communicate a known electricity to it, by touching it with a piece of rubbed sealing wax, until, on approaching the wax slowly to the needle, it repels it The needle has then acquired a negative electricity, and will be attracted by a positive electric crystal and repelled by a negative one This experiment should, however, be tried on a dry day" As a rule, transparent crystals, with bright polished faces, acquire positive electricity, those that have a rough surface, or are not limpid, negative electricity Amongst the crystals which become electric by pressure, to a very high degree, may be mentioned the Iceland Spar Amongst those that are slightly so, are Topaz, Amethyst, and the varieties of Quartz Pyro electricity is the electricity which is produced in some substances by means of heat The Indians were well acquainted with the existence of this property, so were the Greeks, as appears from the name that they gave to Amber, "electron," on account of its power of attracting small bodies by friction The Tourmaline is called ' Aschentrekker," in

the Dutch language, owing to its alternately attracting and repelling hot ashes, if placed amidst them Those gems that acquire electricity by heat generally present opposite poles, i e, one end of the crystal becomes positively, and the other, negatively electric, as the Tourmaline, Topaz, &c It is not the heat but the change of temperature it causes, that produces the electricity "By increase of heat the positive pole becomes negative, and the negative pole positive To examine the pyro electric properties of a gem, it can be held during its heating or cooling against the needle of a sensitive electrometer, avoiding carefully any friction The longer the crystal, the greater the quantity of electricity produced in proportion In order to ascertain the length of time during which a stone retains its electricity, it must be left in contact with some metallic body The Topaz continues to affect the needle after twenty four hours"

All Minerals are either elementary (or simple) substances or compounds The simple ones are those whose component parts, our present knowledge of chemistry has not enabled us to separate or dissolve, such as Diamond, which we now know to be nothing else but carbon in its purest state The compounds are those whose elementary parts can be identified and separated, as the Emerald, Tourmaline, Peridot, &c, &c Two methods are in use for the chemical examination of Minerals, the *moist* and the *dry* In the former, they are dissolved in

water, or, when that is not found possible, in some acid, in the latter, they are subjected to heat by means of a blow pipe The ease or difficulty with which gems are fused, determines their chemical composition and coloring matter There are many gems which are altogether infusible, or fusible with great difficulty, by means of fluxes, such as soda or borax, or salt of phosphorus The Diamond is an example of the former the Ruby, Sapphire and all the varieties of the Corundums,the Emerald Zircon, &c, are of the latter (by means of borax)

By the application of heat, some Minerals change color, some swell and decrepitate, some burn, globules are produced in some, an enamel, on others, dust, in some others, phosphorescence, in a great many The blow pipe used, should be either made of silver, (which does not corrode), or made of tinned iron, the cavity being square and placed at the bend The latter is much cheaper But in either case, the tip should be of platinum, and removable for cleaning purposes Care should be taken not to interrupt the stream of air and steady flame For this purpose, the air should be supplied from the mouth, as from a reservoir which should not be allowed to get exhausted, and not from the lungs which may constantly necessitate the act of respiration, so detrimental to the arrival at successful results The part of the jet of flame to be used is an important point in the use of the blow pipe If the outside flame, or, as it is called, the *oxidising*

flame, be used, metallic substances get oxidised, as it does not entirely prevent the contact of the air; if the inner flame, otherwise termed the *reducing flame*, which is of a bluish red and intensely hot, then the Minerals, which now become partially or fully de-oxidized, get fused. For carrying on these experiments, a small quantity of the gem, reduced to powder, and held in a small platinum cup, is found to be sufficient. If a Mineral heated in a closed glass box, by flames directed against and beneath it, contains water, it will be volatilized, and condensed on the upper surface. If fluorine forms one of its component parts, the glass may be corroded by it. Some gems are affected by acids; some are not. The Opal is affected by potash; the Garnet, Turquoise, Chrysolite, &c., by acids. The Diamond and the Corundum varieties are not affected by any chemical substances; those Minerals that effervesce on the application of acid should be known as containing carbonates; those that do not, when dissolved in acid generally turn into a gelatinous substance. To produce this result, heat and strong acids are necessary; to produce the effervescence, the acid should be diluted with water, and in some cases, the assistance of heat is required.

MOSAIC.

THAT the art of Mosaic was known to and was in extensive use among the ancients, does not admit of the least doubt whatever "Mosaic pavements,' says Pliny, "have been driven from our floors and have migrated to our ceilings and are made of *glass*, a new invention this, for Agrippa in the baths he built in Rome used terra cotta decorations painted in *encaustic* in the heated chambers, for the other parts employing stucco work, whereas he would certainly have made his ceilings of glass had the invention existed in his time" The *lithostroton*, the first species of mosaic, was, as its Greek name signifies, composed of very small bits of marble "parvolis crustis" The floor of the Temple of Fortune at Præneste, built by Sulla, is the earliest specimen of mosaic in Italy All the finest ancient mosaics were entirely made of cubes of natural marbles of various hues The introduction of bits of glass for the brighter tints belongs to a subsequent period Of this the best example is the Circencester pavements But mosaics of the Lower Empire (of which the earliest existing specimen is the ceiling of Sta Costanza) are made exclusively of cubes of colored glass roughly broken from the mass

The Taj at Agra affords a striking example of the art as practised in India. The jewels which

originally formed the mosaic of that splendid specimen of Indian architecture have now been replaced by imitations.

The Egyptian glass-workers of antiquity produced mosaics so minutely that they could be set in rings and in pendants. The following simple but ingenious method was adopted. "A number of fine rods of coloured glass were arranged together in a bundle, so that their *ends* composed the pattern wished—a bird or a flower, exactly as now the makers of Tunbridge ware do with their slips of differently colored woods This bundle was then enclosed in a coating of pot-metal, usually opaque blue glass; and the whole mass being fused sufficiently to run all the rods together into a compact body, was lastly drawn out to the diameter required. In this way all the rods were equally attenuated without altering their relative position, and the external coating, when the mass was cut across, became the ground of a miniature mosaic, apparently the production of inconceivable dexterity and niceness of touch. Each section of the whole necessarily presented the same pattern, without the slightest variation in its shades and outlines." The best specimen of this nature is to be seen in the British Museum and once belonged to the Duchess of Devonshire It is a square tablet, one inch in width, with the figure of the kneeling winged goddess, Sate, upon a rich blue ground.

The author of the present work has two very splendid mosaic works in his possession, showing the degree of perfection which modern Italy has attained in the art. One is a large round table, in which are reproduced in mosaic the principal buildings in Rome, *viz*, the Pantheon, the Piazza, St. Peter's Church, and other celebrated places. It is a gift to the author from His Majesty the King Humbert of Italy, whose liberality has excited the admiration of all who have seen this unique article. It is estimated in India at about 20,000 Rs. The other is a basilica of St. Peters, also presented to the author by His Holiness the Pope Leo XIII. Both the works have been pronounced by connoisseurs as marvels of mosaic workmanship.

ENAMELS

ENAMELS are of the same composition as pastes, but there is a great deal of difference in the process of their application. "The vitreous mass is ground fine, and then, mixed with gum-water, is applied with a brush to the surface to be ornamented, upon which it is finally fixed by means of fusion. From the degree of heat necessary in the operation, the substratum must be either fine gold or pure copper, capable of resisting it, otherwise the slight compartments formed in the metal to contain the enamel would run, and the outlines of the pattern be deranged" In the preparation of enamels, the ancients used, as *the ground-work of their compositions,* powdered glass or *flint, oxide of lead, and* borax, mixed in various *proportions, and colored by* different metallic oxides *The invention is of Celtic* origin, intended to replace the inlaid gem-work of the orientals, by a cheap and attainable imitation in the baser materials of glass and copper. The art had attained perfection in Britain when *it was but little understood in Rome (during the* reign of Severus), as the celebrated incense-burner, found (with other relics of Greek workmanship) *in* the tomb-vault of one of the Bartlow Hills, proves Similar decorations of British origin have been

from flowing, when fused, out of their proper positions" The French became the unquestionable masters of the art, not before the reign of Louis XIV, and, headed by the celebrated Petitot, produced miniatures on gold as excellent as the most beautiful paintings on ivory. The Chinese practise on this method on a gigantic scale The large basins, exquisitely worked vases, and other things, useful or ornamental, that come from China, are marvellous specimens of the art, and possess this superiority over those manufactured in Europe, that they receive no injury by the action of boiling water

PASTES.

THE word "paste" is derived from *Pastus*, (It. *Pasta)*, food, and has been applied by the Italians to the softened plastic stuff, when they revived the process of imitating precious stones. Pastes are imitations in glass of precious stones and gems, (engraved as camei or intagli), transparent and opaque. The following is a direction for making them :—

"A small iron case of the diameter required is filled with a mixture of fine tripoli and pipeclay moistened, upon which is made an impression from the gem to be copied. This matrix is then thoroughly dried, and a bit of glass of the proper colour laid flat upon it. If a stone of different strata has to be imitated, so many layers of different colored glass are piled upon each other. The whole is next placed within a furnace, and watched until the glass is just beginning to melt, when the softened mass is immediately pressed down upon the mould by means of an iron spatula, coated with French chalk in order to prevent adhesion. It is then removed from the furnace, and *annealed* or suffered to cool gradually at its mouth, when the glass, after being cleaned from the tripoli, will be found to have taken a wonderfully sharp impression of the stamp, but in reverse,

whether the prototype be in relievo or incavo When a cameo is the model, all the undercutting must be stopped up with wax before taking the cast, otherwise it tears away the soft matrix when withdrawn, and on this account, camei in paste are never so satisfactory as intagli If it be wished to imitate a gem full of internal flaws, like the Carbuncle or the Emerald, the effect is produced by omitting the annealing and throwing the paste, still hot, into cold water'

The fact of ancient pastes having a much rougher exterior than the modern ones, leads us to the conclusion that they were taken in a much coarser material—perhaps, in terra cotta They are also full of air bubbles, are much harder than window glass, and would scratch it readily, whereas all modern glass, if colored, is softer than the white kind Then again the antique pastes possess a charming iridescence covering its surface, which is produced by the oxidising of the glass from the action of the salty matters of the earth They also have a porous bubbly texture, not only of the surface, but of the whole body, whereas the modern pastes, (when imitating transparent stones), look pure and same all through, as they are made of pot-metal, *i e*, glass stained of one color

The practice of imitating stones by means of paste was in vogue in the most classical times Heredotus speaks of the pendants that hung in the ears of the sacred crocodiles by a name, which,

translated into English, means "fused gems." Such pendants were frequently used in ear-rings and necklaces of the same period. In his description of precious stones, Pliny often dwells upon the difficulty of distinguishing them from their glassy imitations. He mentions the following kinds, as used in the preparation of drinking vessels and for other ornamental purposes:—"Glass resembling Obsidian is made for dishes (escaria vasa); also a sort entirely red and opaque, called *Hæmatinon*; an opaque white also, and imitations of the Agate, the Sapphire, the Lapis-Lazuli, and all other colours." Among the kinds produced in his time, he mentions the *Murrhinum*, or imitation of the costly murrhine stone, which formed the bowls in Agate with unornamented surfaces. Glass *Scyphi*, exactly imitating the clouds and shades of brown and white Agate, largely exist both whole and in fragments.

The glass-workers of the Lower Empire invented novelties in the art. Of this, the best specimen is now to be seen in the possession of Baron Lionel Rothschild. It is known to be a work of the 3rd or 4th century. The substance is of a pale Ruby colour by transmitted light, and of a pale opaque green by reflected light. Imitations of onyx-vases went by a special designation, "Calices Audaces," or "Impudent Ware," to express the boldness of their pretensions. Instances are known of finger-rings made entirely of glass. A curious example

of the ancient imitations is afforded by those disks, the size of ring-stones, the ground imitating Lapis Lazuli, and inlaid with other pastes producing a pattern, in low relief Two specimens of this variety have been seen,—a vine-leaf and a parrot—which, on account of their singularity, fetched £10 each The glass disks found stuck in the plaster, (before it set) which closed up the Roman tombs, come properly within the scope of the subject. These are mostly the bottoms of cups, placed with the dead to contain the sacrament Some of these were in the shape of medallions intended to be worn as pendants by the poorer class, who could not afford the gold ones' Within their substance, they contained rough designs cut out of a solid piece of gold leaf laid between two pieces of glass afterwards fused together and made into a compact body. The designs were generally the busts or full figures of Christ, or the Apostles, with suitable legends, sometimes, those of the reigning sovereigns These medallions were put inside the tomb, with the object of marking the date, and of guarding the repose of the dead. Heraclius, who seems to have been a Spanish Goth, and who flourished in the 7th century, gives directions for making pastes One of the best pieces of paste was found among other remains of Roman antiquity at Shefford, Bedfordshire, and is now to be seen in the Museum of the Cambridge Antiquarian Society. The best ancient intaglio pastes seen are one found

near Rome in 1850, the subject engraved upon it being the Town of Troy, and another, the bust of Abundantia, in imitative Lapis Lazuli As soon as the glyptic art revived in Italy, the former makers of counterfeit gems began to reproduce intagli in their own material But the art of paste making reached its perfection under the auspices of the Regent Orleans The new system was soon taken up by all jewel-makers in Europe Goethe visiting Rome in the last quarter of the century (1786 9), found paste making a favorite occupation with the connoisseurs Even up to this day, the Italians show great skill in the art The account of modern paste would remain incomplete without the mention of Wedgwood's seals and camei These are, however, made of porcelain, and are decidedly superior to paste in hardness, even to the extent of emitting fire if struck against steel These are of two kinds, one imitating black Jasper, and the other, Lapis-Lazuli Strass, called after the German chemist, its inventor, is the brilliant white paste, the material of Paste Diamonds It reproduces the other gems when colored by different metallic oxides Various recipes are given by Barbot as to its composition, but the Parisian chemists have hit upon a discovery which supersedes all previous directions By a preparation of borax, (not yet patent to all), a paste, known as the "diamant de bore," is produced, which becomes as hard as Quartz, resists the action of the file and

when set in real gold is hardly distinguishable from genuine brillants even by the most experienced eye.

The Romans excelled in the imitation of all precious stones,—the Emerald and the Lapis-Lazuli, most particularly—but the ingenious workmen of modern paste have quite eclipsed their fame in the preparation of all other kinds, except, perhaps, in point of hardness The following recipes are taken from Barbot's Traité des Pierres Précieuses' (strass) for the preparation of some of the stones —

Strass

Rock crystal	220 07
Minium	342 17
Potass, purified	116·90
Borax	15 07
Arsenic	0 66

Emerald.

Strass	250·00
Copper, green oxide	2 51
Chrome, oxide	0 11

Beryl.

Strass	187 50

Sapphire

White strass	31 25
Cobalt oxide	0 11

Garnet, Siriam.

Strass	27 75
Antimony, glass	13 95
Purple of cassius	0 110
Manganese oxide	0 110

Selling Prices of Precious Stones—Past and Present.

Cellini calls the Ruby, Emerald, Diamond and the Sapphire, by the name "Precious Stones," and assigns the following price to the best specimens of each—

	Gold Scudi
Ruby, of one carat	800
Emerald "	400
Diamond "	100
Sapphire "	10

The gold scudo was in intrinsic value 9 shillings, and in current, was about the same in Italy in 1560, when she was known to be the richest country in the world In De Boot's time, the Ruby was estimated by the jewellers at half the price of a Diamond of the same size but not of the same weight, but if it exceeded 10 carats in weight, then, according to the rules he laid down for the latter stone The value of the Balas was fixed at 10 ducats for the first carat, afterwards to be multiplied by the simple weight, that of the Spinel at half that of the Diamond The price of Table-cut Diamond was put down for 30 ducats (15 £), the one carat Sapphire, at 2 thalers (6 s), for higher weights, as their square multiplied by one thaler The Emerald was at this time so abundant, that De Boot considered one-fourth the price of Diamond even too high for it Rose cut Diamond of one carat was valued by Berquem at 100 francs, by Tavernier, about quarter of a century later, at 150 At this time no other cut than the Table and the Rose was spoken of In 1777, Dutens valued the Brilliant Diamond of one carat at 8 louis d'or (each louis being equal to 18 s, intrinsically), and after the 1st carat, as the

square of the weight multiplied by that figure Small Emeralds, if fine, at one louis, a carat, taken together, of $1\frac{1}{2}$ carats, at 5 louis, of 2, at 10, beyond which no definite rules could safely be given It appears that in his time, the Sapphire was not much appreciated, as he assigns to a stone, 12 livres (9 *s*), for the first carat, and over that as the square multiplied by this One of 10 carats was valued at 50 louis, one of 20, at 200, and so on In the beginning of the 18th century the value of Emerald fell so low that Caire fixed the first carat at about 24 francs One of 20 carats was priced at 3,000 francs (120 £) only The first carat of the Ruby was put down at 10 louis, of the Ruby of 2 carats, at 40, of 3, at 150, of 4, at 400 Now a days, a perfect Ruby exceeding a carat sells for a good deal more than a Diamond of the same weight For several years previous to 1850, the value of Diamond remained, with slight variations, at the same standard as fixed by Jeffries and Dutens, *i e*, 8 £ for the first carat Emeralds and Sapphires were both priced at 3 £ per carat, if fine, the value of the pale specimens of either being difficult to fix, in consequence of their never having a fixed market value But since that period, the Diamond has doubled and the Sapphire quadrupled its value, and, as for the Emerald, it has become the most valuable of all, and if perfect, exceeds the value of the Diamond in the same ratio as that fixed by Cellini The

Spinel and the Balas, more sought after by the Orientals than by the Europeans, have been considered to possess the same value as the Sapphire. De Boots gives the same value to the Pearl as to the Opal, *i. e.*, 3 thalers (9 *s.*) for the first carat, and then as the weight squared, up to 11 carats; but for higher weights, multiplying the square by 4 thalers. The present selling price in Paris, as given by Barbot, is 50 francs per carat, multiplied by the simple weight. The Turquois of the smallest size, sells for about 6 pence per dozen; whereas a good one, of half an inch in diameter, is fully worth 10 £. One, as large as a shilling, is mentioned by Emanuel as having sold for 400 £. Such gems as have gone out of fashion, (as for instance, the Amethyst, Jacinth, Chrysolite, &c.,) are purchased by jewellers at nominal, and sold by them at fancy price. The fine Persian Lapis-Lazuli now sells in the mass for 30 £ per pound. It is now drawn into slabs, for brooches and pendants, as in the classical days.

The Imperial State Crown of England.

The following description of the British crown is taken from Professor Tennant's:—

"The Imperial State Crown of H. M. Queen Victoria was made in the year 1838, by Messrs. Rundell and Bridge, with jewels taken from old crowns and others furnished by command of Her

Majesty It consists of Diamonds, Pearls, Rubies, Sapphires, and Emeralds set in silver and gold it has a crimson velvet cap with ermine border, and is lined with white silk Its *gross* weight is 39 oz 5 dwts Troy The lower part of the band above the ermine border consists of a row of 129 Pearls, and the upper part of the band, of a row of 112 Pearls, between which, in front of the crown is a large Sapphire (partly drilled) purchased for the crown by H M King George IV At the back is a Sapphire of smaller size, and six other Sapphires, three on each side, between which are eight Emeralds

"Above and below the seven Sapphires are fourteen Diamonds, and around the eight Emeralds, 128 Diamonds Between the Emeralds and the Sapphires are sixteen trefoil ornaments containing 160 Diamonds Above the band are eight Sapphires surmounted by eight Diamonds, between which are eight festoons consisting of 148 Diamonds

"In the front of the crown, and in the centre of a Diamond Maltese cross, is the famous Ruby said to have been given to Edward Prince of Wales, the Black Prince, by Don Pedro, King of Castile, after the battle of Najara, near Vittoria, A D 1367 This Ruby was worn in the helmet of Henry V, at the battle of Agincourt, A D 1415 It is pierced quite through, after the Eastern custom, the upper part of the piercing being filled up by a small Ruby Around this Ruby to form the cross, are 75 Brilliant

Diamonds Three other Maltese crosses, forming the two sides and back of the crown, have Emerald centres, and contain respectively 132, 124, and 130 Brilliant Diamonds

"Between the four Maltese crosses are four ornaments in the form of French fleurs de lys, with four Rubies in their centres, and surrounded by Rose Diamonds, containing respectively 84,86,86,87 Rose Diamonds

"From the Maltese crosses issue four Imperial arches, composed of oak-leaves and acorns the leaves containing 728 Rose, Table, and Brilliant Diamonds 32 Pearls forming the acorns, set in cups, containing 54 Rose Diamonds and one Table Diamond The total number of Diamonds in the arches and acorns is 108 Brilliant, 116 Table, and 559 Rose Diamonds

"From the upper part of the arches are suspended four large pendant pear shaped Pearls with Rose-Diamond cups, containing 12 Rose Diamonds, and stems containing 24 very small Rose Diamonds Above the arch stands the *Mound*, containing in the lower hemisphere 304 Brilliants, and in the upper 244 Brilliants the zone and arc being composed of 33 Rose Diamonds The cross on the summit has a Rose cut Sapphire in the centre, surrounded by 4 large Brilliants and 108 smaller Brilliants"

Summary of jewels comprised in the Crown—

1 Large Ruby irregularly polished
1 Large broad spread Sapphire

16 Sapphires.
11 Emeralds.
4 Rubies.
1363 Brilliant Diamonds.
1272 Rose Diamonds.
147 Table Diamonds.
4 Drop-shaped Pearls.
273 Pearls.

Wedding Rings.

FROM very early stages a peculiar charm appears to have been connected with the ring Without beginning or end, it has long been regarded as an emblem of eternity, and also of the strength and perpetuity of affection. The fourth finger of the left hand has long been considered sacred, and hence has been consecrated to wear the wedding ring. The Greeks and Romans were so fully convinced of the intrinsic value attached to this finger, that it was called the medical or healing finger Their various medicinal preparations were stirred with it in place of a spoon, it being supposed that should any noxious ingredient be included in the cup, warning of the fact would immediately be given by a palpitation of the heart. In some remote country places in England this superstition is still firmly believed in The other fingers are thought to possess a certain power of evil, but a wound or sore stroked by the wedding finger is expected by them in a short time to disappear; and

the wedding ring itself is by many supposed to have the same healing effect. The rings used by the Jews at their marriage ceremonies were sometimes very large in size, and elaborate in design. The Jewish law demanded too that they should be of a certain value, and to prove this to be the case, they were before the ceremony submitted to an examination. It was a rule also that the bridegroom should purchase the ring out of his own private resources and not obtain it either on credit or as a gift from a friend; and after the ring had been placed on the bride's finger, the marriage was considered then, as it is now, to be irrevocably binding. Among the fishermen on west coast of Ireland, the wedding ring is kept as an heir-loom in the family, and is considered the property of the eldest married daughter; consequently many of the wedding rings still worn by the fish-wives in that district are quite old, and of exceedingly ancient design, being manufactured as far back as the Elizabethan era. In the sixteenth century, both marriage and betrothal rings were made with a motto or posy inscribed inside, and to these Shakespeare, in two or three of his plays, refers.—*Cassell's Domestic Dictionary.*

Diamonds and Sham Diamonds.

PEARLS from the depths of the ocean and Diamonds from the bowels of the earth are constantly being threatened in their intrinsic value by artificial

competition, and natural Diamonds are now, it seems, exposed to the rivalry not only of some conglomerate of Diamond dust—or of *what* passes for it—manufactured into the semblance of Brilliants, but also to that of genuine Diamonds, produced not by the ordinary agencies of nature, but by chemical and magnetic means at the will of man A "Manufacturer of Diamonds' has written to the *Morning Post* saying that he can sell for less than a sovereign an artificially made Diamond equal in appearance to a real Diamond worth £300 and undistinguishable from it except by the most practised and skilful experts But he denies the power of the chemist to produce Diamonds of sufficient size and at sufficiently low cost to have the effect of disturbing the market value of natural Diamonds, and Diamond merchants take the same view of the pretensions put forward by the Diamond manufacturer that he takes of the claims advanced by the Diamond chemists Nothing, according to the Diamond merchants and the true amateurs of Diamonds, can equal the Diamond in hardness, in brilliancy, and in play of prismatic colours except another Diamond, and to the artificially composed stone, as to the minute crystals of Diamond like matter produced by the prolonged action of a galvanic battery upon a solution of pure carbon, the name of Diamond is refused Neither ordinary tools nor ordinary heat can affect the true Diamond If air be excluded,

it may be heated to a white heat without injury; and though it may be reduced to something like coke by means of an exceptionally powerful galvanic battery, yet so formidable is the apparatus required for effecting its solution that practically the Diamond may be looked upon as insoluble. Its combustibility was first demonstrated by the members of the Academy of Florence in 1694, by subjecting it to the solar rays concentrated in the large parabolic reflector made for the Cosmo de' Medici, when it burned with a blue, lambent flame.

The Diamond is often found in such alluvial deposits as are worked for gold. Diamonds were first discovered in Asia, and soon after their discovery were greatly prized in Hindostan,—as is sufficiently shown by the value attached to them in the tales of "The Thousand and One Nights." The Diamond mines of Golconda were for centuries the only ones known; but in 1728 Diamond mines were discovered in Brazil; and in 1868 what are called Diamond-fields were opened up in the country vaguely known as South Africa. The South African Diamond-fields owe their origin, or rather their recognition, to the picking up by a child of a large Diamond on the banks of the Orange River. In 1869 a Diamond which has since become known as the "Star of South Africa" was found by a Griqua shepherd, and several small stones were met with on the banks of the Vaal River in 1870. A year or two ago more than 4,000

persons were employed in connection with the South African Diamond fields, chiefly in the valleys of the Orange and Vaal rivers and at their junction The remarkable thing about the African Diamonds is the great number of large stones found among them Their value, however, is diminished by the vast majority of them being tinted with yellow and other shades Large yellowish stones are now sold for about one fourth the price they fetched eight or ten years ago, while the worth of small stones, even of good quality, has deteriorated by nearly one half The whole of the South African Diamond *region, to the extent of about 17,000 square miles,* was annexed in 1871 as a British colony, under the title of Griqualand The Brazilian mines are now looked upon as nearly exhausted, and as a matter of fact are no longer worked, while the produce of the South African fields is constantly declining This must have seemed to favour the new industry which has arisen in connection with the manufacture of Diamonds, and the various plans which are from time to time formed by the inventors of the type of Balthazar Claes, in Balzac's "Recherche de l'Absolu,' for flooding the market by means of Diamonds chemically produced Natural Diamonds, however, have lately turned up in the United States, especially in California, and they have also been discovered in various parts of Australia

The finest Diamonds are clear and transparent as a drop of pure water. But besides these "brilliants of the first water" as they are called both technically and in ordinary conversation, there are coloured Diamonds of every sort and hue. A yellow shade is considered objectionable in a Diamond; so also is a cinnamon colour. Next to rose-coloured Diamonds green take rank in the market; next to green, blue; and next to blue, black. The value of a Diamond may, according to some writers on the subject, be ascertained by a regular formula, according to which the square of the weight in carats must be multiplied by a sum varying according to the condition and quality of the stone. If the Diamond is of good water and of fine shape, this sum may be put down at £2. If, however, the Diamond be perfect in quality and also perfectly cut, the sum to be taken as the basis of the calculation will be £6 or £8. Big Diamonds have a larger theoretical value than small ones; but as a matter of fact Diamonds of large size have often had to be cut up before they could be disposed of in the market. When in 1837 the Deccan booty, obtained by the army of Lord Hastings, was sold, a magnificent Diamond weighing 375½ grains, and of the purest water, brought at auction only £7,200. In the present day, finest Diamonds are held by Portuguese, Spanish, French, and English families in the order named; and the best market for them is in the United States. Among historical

Diamonds an important place must be assigned to the celebrated Pitt Diamond, of which the weight was 430 carats. But after being cut—a process which occupied two years—it was found to have been reduced to the weight of 36 carats, and it was then sold to the Regent of Orleans for £135,000. Its present value is said to be £200,000, though it might be difficult to find a purchaser for it at that price. The Pitt Diamond—or Regent Diamond as it was called after having passed into the hands of the Duke of Orleans—became one of the Crown Diamonds of France. It was destined to meet with strange adventures; for, after being placed by Napoleon on the hilt of the sword of State, it was captured by the Prussians at Waterloo. A Diamond of literally inestimable value, belonging to the King of Portugal, and of Brazilian origin, is said to be worth upwards of £5,000,000 sterling; but this value is clearly not its value in change. For the historical interest attached to it, no Diamond can be compared to Her Majesty's Koh-i-noor. Originally dug from the mines of Golconda, it passed to successive sovereigns of Central India, and in the early part of the fourteenth century, was added to the treasures of Delhi. It remained in the possession of the reigning family until the invasion, in the eighteenth century, of Nadir Shah, who, seeing it in the turban of the vanquished Mahommed, proposed to him an exchange of head-dresses, and, the polite offer being

perforce accepted, bore away with him the priceless jewel. After the assassination of Nadir Shah, the "Mountain of Light" passed through the hands of Ahmed Shah, of Cabul, to Shah Soojah, who gave it as the price of his liberty to Runjeet Singh, ruler of the Punjaub. On the annexation of the Punjaub in 1849 it was stipulated that the Koh-i-noor should be surrendered to the Queen of England, who received it from the East India Company in 1850. At the Great Exhibition of 1851 this famous Diamond was found inferior to its glass model, and it was necessary to surround it with gas-lights in order to bring out its colours. The Russians have a very good Diamond known as the Orloff. It is about the size of a pigeon's egg, and one time formed the eye of an idol in the Temple of Brahma at Pondicherry. Brahma was robbed of it by a French deserter, from whom it found its way to a Greek merchant established somewhere on the shores of the Mediterranean, who sold it to Count Orloff, at that time in command of the Russian Mediterranean squadron, for half a million roubles, an annuity of 20,000 roubles, and a patent of nobility.

The Diamond manufacturers and Diamond chemists of the present day do not aim at producing exceptionally large stones; and as historical curiosities, to which an enormous price has always been attached, we may be sure that neither the Orloff nor the Koh-i-noor will lose much of their

present value. Meanwhile the Diamond merchants console themselves, in presence of the menace brought against their trade, by reflecting that many years ago, under the direction of a French chemist, M Dupretz, carbon, free from every trace of foreign substance, prepared from crystalline sugar candy, was made to deposit microscopic crystals which had the hardness of Diamond powder and the general characteristics of Diamonds and that nothing came of M Dupretz' process As to whether the new system of manufacturing Diamonds will injure the legitimate business we have no means of judging, but Diamond manufacturers and Diamond merchants are agreed as to the inoffensive nature of the microscopic Diamonds produced by chemical agencies —*Pall Mall Gazette, January* 30, 1880

* The reader will observe that the totals marked thus (*) are full of mistakes, probably on the part of the printer. Having no means of comparing the figures which we have copied above with any other and of finding out whether the mistakes belong to the totals or to the particulars, we have thought it useless to cast up a grand total.

THE PEACOCK THRONE OF SHAH JEHAN.

THE *Tukht-táus*, or the Peacock Throne of Delhi, is one of the best specimens of the pomp and prodigality of the Mogul Emperor Shah Jehan. The name is derived from a peacock, with its tail spread (represented in its natural colors in Sapphires, Emeralds, Rubies, and other jewels), which formed the chief ornament of a dazzling mass of Diamonds and precious stones that were encrusted in the Imperial seat. Tavernier, who saw this wonderfully constructed throne, does not seem to disbelieve in the popular estimate of the article which is stated to have cost nearly six millions and a half sterling

THE TAJ MAHAL.

THE *Taj Mahal* is a corruption of *Mumtaz Mahal*, the name of Shah Jehan's Queen, whose tomb it forms. It is situated at Agra in the North-Western Provinces of India, and is "a mausoleum of white marble decorated with mosaics, which, for the richness of the material, the chasteness of the design, and the effect, at once brilliant and solemn, is not surpassed by any other edifice, either in Europe or Asia." The building on the outside is of white marble with a high cupola and four minarets. A lofty hall, of a circular form, lies in the centre of the inside, under a dome, in the middle of which is situated the tomb, surrounded by an open screen of well-worked tracery composed of marbles and mosaics The walls are also of white marble, their borders being decorated with flowers in mosaic The materials used for the mosaic work are Lapis-Lazuli, Jasper, Heliotrope, a sort of golden stone (not well understood), with Chalcedony and other Agates, Carnelians, Jade, and similar other stones. "A single flower in the screen," says Mr. Voysey *(Asiatic Researches,* Vol. V,) "contains a hundred stones, each cut to the exact shape necessary, and highly polished" The mosaics are said to be the workmanship of Italians. "It is singular," remarks an eminent historian, "that artists of that nation should receive lessons of taste from the Indians."

VIEWS OF ARABIC AND PERSIAN WRITERS ON GEMS AND STONES.

THE FORMATION OF STONES.

Arabic, Huzur; Persian, Sung; Hindí, Puththur.

FINE pieces of earth are transformed into stones when they remain close and compact for a length of period, and take into their elementary watery substance, the elements of heat and dryness. Of the four elements that combine to produce stones,—*viz*, heat, cold, dryness and moisture—the predominance of one or more over the others gives rise to the difference in their color. For example, white is the color of those stones in which cold and moisture exist in large proportions; where they do in small proportions, the stones become blackish. Where heat and dryness prevail, the stones get a red hue; where they have less predominance, the resulting color is yellow. Where the proportion of heat is greater than that of moisture, the stones turn black and hard; but where both these elements are in small proportions, the stones assume the color of the *Lájeburd*. Where the heat and moisture are in equal proportions, the stones take the color which is produced by the mixture of white and red; where these two qualities are in unequal proportions, the stones differ in color and quality, *viz*, where heat preponderates, the

stones become blacker and harder than those where it does not; and where moisture prevails, they become whiter and softer. The inequality of the elements in the composition of the stones in particular portions of them determines the color and quality of the parts so affected.

It is simply an error on the part of European writers on jewelry to assert that the use of stones externally or internally has no practical influence over the human body or mind.

THE DIAMOND.

Its Properties, Varieties, &c.

Arabic, Másh, Persian, A'lmásh; Hindustani, Hirá, and Sanskrit, Hiraka.

THE Diamond is a very hard and dry mineral, and is found in a variety of colors;—white, yellow, red, black, and greenish (called in Hindustani, *Tabhá).* The white specimens, full of flaws, are found in abundance; the red, yellow, black, greenish and the flawless *Khálish* ones (*i.e.*, those stones which do not show through them tinges of any other color but their own), are rare. The spotless *Khálish* stones of a white or any other color fetch the highest value in the market, if they are of a good large size. The birth place of the Diamond lies principally in the Deccan, about *Kálákándár* (Golconda), *Jahná pánná* (Panna) and the Kokaf Mountains. The way to find out the exact locality of the Diamond in the Deccan is to dig up a hole in the ground and fill it up with water; then watch at sunrise the part which a sudden flash of the lightning may illumine at that time, and then to unearth the treasure which is sure to lie buried there.

The brilliance of the Diamond cannot be noticed in its primitive state, but it has to be brought out by the skill of the *Hukkák*, or the cutters and polishers of gems. The Diamond is also found in

the new island in the south known as Borazil (Brazil ?), but these specimens cannot approach the produce of the Golconda mines in clearness and hardness The quality of the white Diamonds can not be ascertained until they are cleaned by the *Hukkak* in the whetting instrument, by being first stuck to a piece of wood by means of shell-lac, and then rubbed over by the dust of the black variety Like the *Talc*, and a species of yellow arsenic known as the *Bansi patri Haritála*, the Diamond is full of joints, which are in some cases so imper ceptible as to defy detection In others they are visible to the human eye and can be opened out by those only who are acquainted with the nature of the thing Those who assert that the Diamond can be cut by glass labor under a grievous error Whenever it breaks, it always does so in triangular pieces This stone obtains different names, accord ing to its classifications *Naosadari* are those which resemble the carbonate of ammonia in color, and whose inside is clear as looking glass *Kabrasí* are those which have a silvery hue Those that are white but have less of the intensity of color than that of the *Naosadari*, go by the names of *Kaduní* and *Jáyoní* Some people give the palm of excellence to the last variety Such specimens as have the color of the iron in them are known as *Álmásh Hádidi* The Diamond is incombustible, but it can be burnt by the Hindustani *Hakims* (medical practitioners), in combination with other

substances,—the powder so obtained being said to cure several kinds of diseases

The Diamond is a dry stone and possesses the coolness of the 4th class Some ascribe to it heating properties

---

Marvellous and Medicinal properties

If worn the Diamond has the virtue of imparting health to the body and of dispelling fear It assuages the sufferings of a tedious labor pain and brings on safe and speedy delivery, if tied round the thighs of the woman about to be confined It destroys all enemies, if worn in the arms, and cures epilepsy, if worn in the arms after being cut into a hexagonal shape If, in combination with other ingredients it is used as a dentifrice, it renders the teeth bright and hard But it is better not to use it for such a purpose, as the presence of a single particle in the stomach may produce death If kept close to the teeth, it causes their fall It is a fatal poison If by accident, some one takes a quantity of it, his life should not be considered safe, until he is made to vomit it out by means of drinking a quantity of fresh cow s milk, (without being boiled), or some heated clarified butter (obtained from cow s milk), or by any other means, such as by applying the fingers to the inside of the throat The soup of some fatty flesh is then to be given to the patient to complete the recovery

---

RUBY.

(a)—YACÚT

Its Varieties, &c

THE *Yacut* is one of the best of gems and a favorite of men It is found in a variety of colours—red, yellow, *Kabud* (*i e*, blackish), green, white, and of the color of pestachio nuts Of each of these colors, there are different degrees Of all the specimens, that which goes by the name of *Rommani* (or, the color of the pomegranate), is considered to be the best, it is very hard, spotless and has reflecting powers like looking glass The largest and the properly cut ones fetch the highest value Of red *Yácúts*, the following are some of the subdivisions *Surkho humri*, or very red, *Surkho ordi* or rose red, *Surkho Narungi*, or of the color of the orange, *Surkho Jafrani*, or of the color of the saffron, and *Surkho Nemui*, or of that of the ripe lemon The following are some of the varieties of the *Kabud*, *Kabud Áshman Guni*, or of the hue of the sky, *Kabud Koheli*, or of the color of *Surma*, (a powder applied to the eyes), *Kabud Lájeburdi*, or of the color produced by the combination of blue and *Ashmani*, and *Kabud Pestai*, or of the color of the pestachio nuts,—a rare specimen That kind of *Yacut*, which is hard, clear, and has its color (whatever

it may be) evenly spread, without showing the faintest tinge of any other, commands the admiration of all jewel mongers The *Yácút* is next to the Diamond in hardness The following is the order in the scale of hardness among the varieties *Kabud*, red and *Pestai* ones, and the white one Of the red specimens *Surkho Humri*, *Surkho Ordi*, *Surkho Nárungi*, *Surkho Jáfráni* and *Surkho Lemui*. Of the *Kabud* ones *Kabud Áshmáni*, *Kabud Koheli*, and *Kabud Lájeburdi* The perfectly red specimens are called in Hindi, *Mánik* or *Padam*, and in English, Ruby The yellow ones are known in Arabic as *Bosrák*, in Hindi, *Pokráj*, and in English, *Tuobus* (Topas ?) The blue ones are designated in Persian as *Nilum*, in Hindi, *Nilmund*, and in English, *Safidr* (Sapphire ?) The *Yácút* is found in the mines of sulphur and mercury. It is known that this stone is met with at Pegu, but the place about the mines is perfectly uninhabitable, as the earth thereof is black and hard, and frequently emits a sulphurous smell, is surrounded by large trees, and is dry and rent in parts, and, lastly, is the scene of a good deal of storm and thunder in the rainy season The *Fakirs* (wandering mendicants) and the poor, who with difficulty collect stones from these hardly accessible mines, have, according to the laws of the country, to sell them to the king If a private party buys them surreptitiously, and the fact becomes known, the whole of his estate becomes escheated to the

Government It is said that a certain king had once attempted to proceed to the mines with a grand procession to get hold of good stones, but he could obtain nothing better than some small specimens found upon digging the earth on the surface He had ultimately to desist, as the unbearable smell of sulphur threatened the destruction of nearly the whole party From that period it was ordered that no one was to dig the earth deep for search of the gem The *Yácút* is also found in *Borazil* (Brazil?), in the new Island discovered in the South (Australia?), and in the Chhayanât (?) Island But the best specimens are those that come from Pegu The Brazilian *Yácut* is large and clear, but it lacks the hardness of the Pegu specimens No other variety than the red one is proof against heat According to some, the red stones attain increased lustre by being subjected to heat Some, again, assert, that the white *Yacut* which shows through it a tinge of reddishness, may be made red, by being put in an earthen pot to heat But practice does not appear to bear out the truth of this statement In fact, smoke, perspiration, oil and bad smell all serve to affect the color of the *Yácut* The *Yacút* is not affected by heat or cold It has the dryness of the 2nd class The yellow varieties have the dryness and coolness of the 2nd class The *Kabud* ones have the warmth of the 1st class, and the dryness of the 2nd The white specimens remain

the same either by heat or cold, and have the dryness of the 1st and 2nd class.

Marvellous and Medicinal virtues.

The wearer of the *Yácút* obtains satisfaction of mind and strength of the brains. A *durm* dose of it, taken internally, cures epilepsy, insanity, cholera, and the spitting of blood; causes free circulation of blood throughout the system, and prevents the devil (Satan) causing uneasiness of mind. It cures all kinds of poisonings from snake-bite, or from administration of poison by enemies. It frees the atmosphere from the pollution engendered by cholera. It purifies the blood, and brings back to its normal state the fatally quick action of the pulse. It invigorates the power of the soul. The wearer of the *Yácút* in the form of a finger-ring obtains from the deity all the desires of his heart and becomes proof against thunder-stroke and cholera. Worn over the eyes or applied to them as a *surmá*, it cures all complaints of the vision; over the mouth, it takes away the bad smell of it, allays thirst and gives constant satisfaction to the mind. It brings honor to the wearer. The dose for internal use is from one *kirát* (karat? *i. e.*, four barley-corns) to one *dáng* (16 barley-corns).

For a detailed account of burning the *Yácút* to a fine powder, *vide* the work called *Kerábádin Kabir.*

---

stones. The Lál possesses heat and cold in equal proportions, and belongs to the 2nd class of dryness.

Medicinal Properties.

The wearing of the Lál gives contentment, prevents the spitting of blood, cures piles, and all diseases caused by the increase of phlegm. Applied to the eyes as a *Surmá,* the stone adds to their lustre. The dose for internal use is from one *Kirát* or 4 barley-corns, to one *dáng* or 16 barley-corns. According to some, it is from 4 to 8 barley-corns.

CAT'S-EYE.

Its Varieties, &c.

Persian, Jazá.

THIS stone is found in the mines of *Ákik*, in Emen, Ha-osh, Kambayet, and Guzerat. It has joints in some of the specimens, as in *Talc*, and has the shape of human eyes. It is found to be of many colors :—white, red, yellow, and black. In order to make it more brilliant, it has to be cut first, and then, like the *Ákik*, placed in an earthen vessel and put to heat. *Bábáguri* is the name given by the Persians to such stones as are circular in shape and have their outside color different to that of the inside ; *Solemáni*, to such as are red or black ; and *Áyenelhur* (or *Lahasaniá*, in Hindi), to such as are green, or yellow, clear, and have reflecting powers like those of the looking-glass. The last variety is met with in the mines of *Yácál*. It is either hard or soft ; that which has two "lines" in it fetches better value than others. It has the dryness and coolness of the 2nd class.

Marvellous and Medicinal Properties

The Cat's eye infuses hilarity into the mind, cures pallor, brings on safe delivery, in cases of protracted labor, if tied in the hair of the suffering woman, causes infants suffering from hooping-cough, &c, to bring up phlegm, &c, when applied to their throat, and protects them from witchery and evil spirits It cures lachryma, if applied as a powder to the eyes, and keeps the teeth clean if rubbed over them as a dentifrice Its powder (obtained by burning) is said to heal sores, if applied to them, and causes new flesh to appear in the place of putrid matter Its use is a safe guard against unpleasant dreams

PEARL.

Arabic, Lulu, Per, Marowarit, Turk, Ainchin or Anchu, Hindi, Mukta or Moti The larger varieties are called in Arabic "Dur" That which is the only content of an oyster and is very large, is known in Arabic as "Dur re mucknun" or "Dur re etim"

PEARLS are born of oysters and are either large or small in size The latter are sometimes smaller than pistachio nuts, the former have sometimes been found to be as big as the eggs of sparrows (*Chataka*), and to weigh 13½ mashas But these are very rare The white specimens are the best, they are lustrous, clear, and perfectly round The following varieties are recognized 1st, the *Bahrani* or those which are found about *Bahran* (Bahrain?), 2nd, the *Hormozi* or those that are produced in *Hormoze* (Ormuz?), 3rd, the *Ammani*, or those that come from the country of Amman(?), 4th, the *Surai Sukul*, or those that in appearance resemble the *Surái*,—the long necked drinking pitchers used by the Mahomedans The clean specimens are good, but they are inferior to the round ones The worst varieties are those which are either yellow or black, and have no lustre about them Pearls are to be found in the New Island in the South (Australia?), Borazil (Brazil?), Chhayalán (?) and other islands in that

direction; in Moorshedabad, in the big pond known as the *Motijheel;* in Sivagunj in Jahangir Nuggur(?); and in some of the rivers in Sylhet These are all small, yellowish and dirty. The few large ones observed are like peas in size, reddish in color, and do not exceed 4 rutties in weight individually. Those that have been described above as found in Bengal are not real Pearls, but are some sort of water congealed. The Pearl-producing oysters are invariably found in deep waters and are covered with black fibres like the roots of trees These are always associated with large pieces of stones When they feel hungry, they open the sides and eat up all the small fishes, insects, and moss that come in the way. With the increase of the size of some Pearls, the oysters begin to grow larger and the fibres surrounding them get stronger Such Pearls turn out very clear and large. Pearls are born in the central part of the oyster. As delay in taking out Pearls results in their assimilation with the oysters, all large oysters should at once be ripped open when found. It is said that when drizzles of rain (intended for the formation of Pearls), enter into the opened oysters and remain subsequently closed inside for a length of time in the depth of ocean, they become converted into Pearls There appears to be no foundation for this statement. The real art of creating Pearls has been faithfully described in the work called "*Kerábádin Kabir*"

In coldness and dryness, the Pearl belongs to the 2nd class

Marvellous and Medicinal Properties

THE use of Pearls conduces to contentment of mind and to strength of body and soul The burnt powder of this gem, if taken in with water, as *Sherbet*, cures vomitting blood of all kinds It prevents evil spirits working mischief in the minds of men, takes off bad smell from the mouth, cures lunacy of all descriptions, and all mental diseases, piles, jaundice, all diseases of the heart, intestines, and stomach, stricture and excessive menstruation Burnt Pearl mixed with water and taken into the nostrils as a smelling powder, takes away head sickness The burnt powder used as a *Surma*, cures conjunctivities, cataract, lachryma, the swelling of the eyes, the painful sensation such as is caused by the entry of sand into them, and ulcers It gives them increased lustre Used as a dentifrice, it strengthens the gums and cleans the teeth Rubbed over the body with other medicines, it cures leprosy and the white skin disease known in Arabic as *Bahac*, in Hindi as *Chhip*, and in Bengali as *Chhuli* It cures all skin diseases It stops bleeding from cuts and ultimately heals them up Whether taken internally or externally, it is a sure antidote to

poison It drives away all imaginary fears, and removes all bodily pain. To prevent its tendency to affect the brains, &c, it should always be used with the burnt powder of *Basud* and, in its absence, with that of the white mother o' pearl The dose of the Pearl powder should not exceed *nim meshkal*, or $2\frac{1}{4}$ mashas

The Pearl loses its color by contact with grease, dirt, bad smell and smoke To wash it clean, a quantity of rice mixed with water should be put in an earthen vessel over the fire, and be taken out of it when the water is a little tepid, then rub the Pearls with the water for some time till they become clean Very warm water may spoil the gems According to some, rubbing Pearls with well ground rice makes them quite clean Some say that Pearls can be very well cleaned if fowls or pigeons be made to swallow them up, and the gems got out, a short while after, by ripping open their stomach The heat in the stomach serves to clean them properly. It is said that Pearls lose their brilliancy to some extent in the morning and evening *Kerábddin Kabir* contains full instructions as to how Pearls can be burnt, assimilated, and made into pills, powders, oils and *majooms* The following is one of the processes by which burnt Pearls can be assimilated with each other Strain the burnt powder well Put this into a bottle with some lime juice, and cork it up Fill up half of an earthen vessel (*Handi*) with vinegar, and hang

the bottle over it by means of strings from outside, so that it does not touch the liquid. Cover the vessel up with an earthen dish, and keep it under a heap of cow-dung for 14 days. Then take it up, and after opening it, you will find that the powder had, after having been converted into water, become one congealed lump. According to some authorities, it is not necessary to pour vinegar into the vessel; the result desired might be obtained by attending to the other conditions of the process.

CORAL.

Its Varieties, &c , &c

Arabic and Persian, Murján , Hindi, Mugá

THIS stone bears a resemblance to the branch of a tree, and is found to be of three colors, —red, black, or white It is to be met with in Emen, imbedded in the earth under the sea The tree is about a yard in height and has a number of branches attached to it, but these never bear any leaves, flowers or fruits By the help of water and air, and nourished by the watery substance attracted towards it by the sun and the stars it takes its birth among the surrounding stones, its size and magnitude depending on the intensity of the planetary attractions It is also found in the seas in Tulas and Andálás The following is the mode of taking it out of deep water —A long piece of rope, with iron and lead tied to its end, is dropped in a certain place over which a boat is continued to be turned round and round, till the rope gets entangled with the tree, and brings it on the surface of the sea Where the water is not very deep, divers are engaged to break the tree, tie it with rope and take it up The cutters have then to cut it into the shape of stones The first class *Mugá* should be large, red, clear and free from knots and holes The next class should have the same qualities, except in color, which

should be white. The black ones come under the category of the last class. The *Murján* has the dryness and coolness of the 2nd, and according to certain authorities, of the 1st class. The black varieties belong to the third class.

Marvellous and Medicinal Properties.

A DOSE of *Nim-Durm* or $6\frac{3}{4}$ mashas of this stone is considered to be a good astringent, and a remedy for all sorts of bleedings. A *Durm* or $13\frac{1}{2}$ mashas is an antidote to all cases of poisoning. Worn over the belly, it cures all stomach-complaints; over the throat of infants, it stops their cries and protects them from fear and sudden starts while asleep. The *Murján* has the same attributes, when worn, as the stone known as the *Basud.*

A detailed description of the process of burning and powdering the *Murján* is to be found in the work known as *Kerábádin Kabir.*

THE EMERALD.

Arabian and Persian Zumurrud, Hindustani Panna

Its Properties, Varieties, &c

THE Emerald has its birth in gold and is always found imbedded in the gold mines Originally, it was gold, pure and simple, its dryness and hardness having gradually converted it into a stone For this reason, it is said that its color is green It remains in the gold mine for 21 years continually, before it becomes hard as a stone On account of their being found in the same mines, the Emerald and the *Zuburzud* have been pronounced by some to be one and the same stone, but, in reality, they are formed of different materials, and consequently bear separate names The Emerald is capable of being cut, if rubbed against a file Those Emeralds that have the color of the gold are known as *Zahabí* Some assert that the place where this variety is kept is never infested with flies, but this statement seems to have no foundation on fact The *Záhábí* is thought to be the best species of the Emerald There is another kind called the *Sayidi*, which comes from *Sayid Miser* (Egypt?), and which, when looked upon, shows the reflection of a man with his eyes shut The variety known as the new Emerald is called *Ra e hání*, after the *Ra e hán* flower, the green color of which it resembles *Fustafi* is the

designation of the specimens which have the color of green mixed with black—*Fustafi* being the Arabic for pistachio nuts. This is called the old Emerald. *Sulkí* is the name given in Arabic to those stones which partake of the color of the Persian curry, *Chekundur.* Those that have the color of the pepper are called in Arabic *Junjárí,* and in Persian, *Jungárí. Kerásí* is the Arabic term for those which are like the *Kerás* vegetable in color. Those that bear the color produced by the mixture of white and green, go, in both the Persian and Arabic languages, by the name of *Sábuní.* But that variety is considered to be the best which is hard, clear, green-colored, and, unlike the *Talc,* free from joints and fissures. The Emerald has the coolness and dryness of the 2nd class.

Marvellous and Medicinal Properties.

WHETHER worn or taken as a medicine, the Emerald bestows contentment of mind, quickens the action of the pulse, gives nourishment to the soul, heart, brains, and stomach; cures epilepsy, removes all bodily and mental pains, stops the vomiting and purging of blood, is an antidote to poison and to bites of wasps, bees, scorpions, &c.; allays unhealthy thirst, and is a sovereign remedy for jaundice, liver-complaints, stricture, gravels, and leprosy. If administered in quantities corresponding with

the weight of 8 wheat-corns, to a patient suffering from the effects of poison or from the bite of poisonous insects, it neutralizes its deadly action —provided it is taken before the poison spreads all over the body. It stops the flow of a fluid substance from the eyes, (caused by weakness of the optical nerves), if it be applied to that part, in the shape of *Surmá* or powder; and brings out all the impurities of the eyes if it is kept constantly fixed before them. Its power of preventing epilepsy having been thoroughly believed in, kings and emperors were in the habit of putting this stone round the neck of their babies as soon as they were born. If it be set in a gold-ring and put on a finger, it would cure cholera. The ashes of burnt Emerald would heal up all ulcers if they are rubbed over the parts affected. If, at the time when Sol enters Libra (combined with air ?), one *Meskal*, that is, 4½ mashas of Emerald, be set into a gold or silver ring of the same weight, and worn on the finger, the wearer would possess the power of striking terror into the hearts of all who would look at him. He would also attain his cherished objects and would detect the presence of poison, (that may have been secretly mixed with his food), by the fact of the stone perspiring immediately on its coming in contact with the edibles. The possessor of an Emerald would never become poor. If a serpent looks at this stone, it is sure to become blind, or, according to some, its

eyes would constantly discharge a peculiar rheum. But those who have practically put the above assertions to the test have come to the conclusion that neither the serpent becomes blind by gazing steadfastly at an Emerald, nor the possession of this stone secures wealth for ever. Many persons, on the other hand, who had in times of prosperity purchased Emeralds at a heavy cost, have been known to dispose of them at a nominal price, when fortune frowned at them. The dose of the Emerald, as an antidote to poison, is one *dang* or the weight of 16 barley-corns; the *Zuburzud* of the same weight may, in the absence of the Emerald, be used for the purpose. To prevent vomiting blood, the dose of the Emerald should be one *Kirat* (Carat), or the weight of four barley-corns. The stone called *Murjdn* may be ground into powder and given in cases of purging of blood, when the Emerald is not at hand.

ZUBURZUD.

Its Varieties and Properties.

IT has been said by *Hákim* Aristatalis (Aristotle?) that the *Zumárrúd* and the *Zuburzud* are found imbedded in one mine. The *Zuburzud*, which is born at the time of the combination of the sun, moon, and the star *Zohul*, is divided into three classes:—1st, the *Misry*, or those that are found in Meser (Egypt),—green, or reddish, and clear; 2nd, the *Kabrasi*, located in the *Kabras* regions,—a mixture of yellow and green; and 3rd, the inferior variety known as *Hindi*, on account of its being found in Hindustan,—a combination of yellow and red.

This stone has the dryness and coolness of the 3rd (and according to *Hákim* Altáki, of the 4th) class.

Medicinal and Marvellous Virtues.

THIS stone has all the qualities of the *Zumárrúd*. It keeps the teeth clean, when used as a dentifrice, and the body in sound health; prevents the spitting of blood, and the stoppage or the discharge of an unusually small quantity of urine; cures gravels; increases the lustre of the eye when applied to it as a *Surmá*; and is a remedy for leprosy, when its burnt powder is rubbed over the part affected. The dose for internal use is half a *durm*. When worn, the

stone cures epilepsy, and helps a suffering woman to a speedy delivery, when tied round her thighs.

If one can cut this stone into the shape of a boat, when the moon enters the Pisces, and use it as a ring on the little-finger of the left hand, he can secure freedom from all diseases and calamities. This ring is also good for assuaging the pains of delivery, when worn by the laboring woman. If this stone be cut into the figure of a fish at the period of the moon's entering the Cancer, and be fixed near the fishing hook, by means of lead, it will enable the fisher to land a good number of fishes. It is asserted by the medical authorities that wine taken in a cup of this stone does not intoxicate the drinker.

THE TURQUOISE.

Arabic, Feiozuj, Persian, Ferozá.

Its Properties, Varieties, &c.

THE Turquoise has the color of the "cerulean vault." It is to be found in Nishapore, Khozund, Kerman, Ázro-i-ján, in the mountains that surround Shiraz, and in the Vinut provinces. The largest, clearest and consequently the best stones are met with at Níshapore. The test of the purity of its color is that it should look bright by day and pale by night. The Turquoise is divided into 8 classes, *viz.*, *Fatahí*, *Azharí*, *Solemdní*, *Durluí*, *Áshmángúní*, *Abdul Hámedí*, *Ándleshí*, and *Gunjúnid*. The first five varieties have the *Kháki* or earthy color; the rest are found in the Mountains of Vinut, and are considered to be inferior in quality. The Turquoise can be manufactured, by mixing five parts of fresh sulphur and one part of mercury, putting the mixture in a cold ground for a period of seven years, and exposing it for the whole time to the rays of the sun and of the star called *Zohul*. Those stones that are found in Kerman and Shiraz, have a tinge of the white in them, and are therefore designated *Sabdnagi* or *Sirboom*. Those that come from Nishapore, Khozund, and Ázro-i-ján, have a dash of the blue in them, and hence their name, *Nilboom*. The produce of the Kerman mines now-a-days turns out better than that of the Nishapore ones.

The Turquoise has the dryness of the 1st class and the coolness of the 3rd

---

Marvellous and Medicinal Properties

The Turquoise possesses the virtues of the *Bish* stone It cures all diseases of the head and the heart By application over the eyes in the shape of *Surma*, it increases their lustre, prevents the fall of fluid therefrom, brings back the color of the pupils if they get white, and restores natural vision to those who are almost blind at night It is a sovereign remedy for hernia, swellings, flatulence, dispepsia, insanity and ulcers inside the stomach or abdomen In combination with other ingredients, it would relieve and cure the pains and swelling of the body caused by assault Whether taken with other drugs or simply with honey, it has the power of curing epilepsy, spleen, stricture, &c In cases of poisoning or snake bite, a *durm* or a quarter *tola* weight of Turquoise should be given with wine, for scorpion bites, a third of this quantity would suffice But as the above prescription may cause harm to the stomach, it should always have added to it a quantity of *Katild* *Hakim* Aristatalis (Aristotle ?) has limited the dose to one eighth of a *tola* Worn on the fingers as a ring, the Turquoise brings about happiness of mind, dispels fear, ensures victory over enemies, and removes all chances of getting drowned, or being struck with lightning, or of being bitten by snakes or scorpions He who after looking at the moon on the *Pratipada* (the first day after new-moon), casts his eyes over this stone, becomes the master of fabulous wealth

---

AGATE.

Persian Ákík

Its Varieties, &c

THE hardest, clearest, and best specimens of this stone are found in Yemen, others are to be met with in Kambaláyet and in the banks of the seas surrounding the Empire of Rome It is found to be of various colors,—red, yellow, white, black, parti colored, and bi colored But none of these colors is durable *Surkho jagri* is the name given to those stones the redness of which is more intense inside than on the surface, *Saf Sullák*, to those that are clear, and have reflecting powers like those of the looking glass, *Násábagá Ga e Sullak*, to those which are not very clear and have not the reflecting powers of the looking glass, *Áblakí*, to those which are partly white and partly black, and *Jútup lati*, to such as have joints like the *Talc* and can be separated scale by scale When taken out of the mines, the *Akik* exhibits very little color, but shows a degree of clearness and reflecting power The following is the mode of coloring it —Put an *Akik* inside an earthen, or, in its absence, a copper vessel half filled with water, and tightly closed and expose it to a brisk fire from the sides and a slow heat from the bottom till the stone attains the desirable color The lapidary s work would not affect this color at all *Sujri* are those specimens

which have the figure of a tree or hill in them; *Játap káti* are also known as the *Juzá*. There are other specimens which can be cut breadthwise and which are, if possessed of circular marks, called *Huzur Solemáni*, and, in Persian, *Bábágurí*. All these varieties are hard and form the ingredients of the *Bish* stone.

The *Ákik* possesses the dryness and coolness of the 2nd class;—the former in a less developed form.

Marvellous and Medicinal Virtues.

VARIOUS qualities are ascribed to this stone by the Mahomedan authorities. It cures insanity, when administered with water or with the *sherbet* of the fruit *Sheu* (a kind of apple). It proves a sovereign remedy for hemorrhage in the genital organs or in the rectum, for the spitting of blood coming out of the heart or stomach, for the unusual discharge of the menstrual fluid; for worms in the stomach; for swollen, hard boils and porous ulcers; gravels and spleen;—when taken with some medicine or with a quantity of water. As a *Surmá*, it adds lustre to the eyes. It prevents the bleeding of the gums, and renders them hard, when applied to the parts, as a burnt powder, mixed with that of the *Basud* stone and that of the *Márwdris* (?). It softens the anger of the wearer and prevents his quarrelling with others. The

use of such stones *(Akik Lahamika)* as have the reddishness of the water after washing raw flesh, in the shape of finger rings prevents bleeding of all kinds The wearer strikes terror into the heart of his enemies, obtains his heart's wishes from the gods, and becomes free from pain in the breast. He who attends the royal court, rubbing over his mouth the oil of *Jaytul* (?), with camphor, musk, and *Akik*, secures very great honors and the favor of the king and of all others The *Akik* confers upon the wearer all the blessings that the use of the Turquoise does Its internal use may do harm to the stomach, but this can be avoided by mixing it with *Katirá* or, in its absence, with the *Basud* stone

BASUD.

Arabic, Kojul; Gr., Kojulun-nun; Lat, Kulure-ún; pure Arabic, Násef; Pers, Basud.

IT would be wrong to say that the *Basud* is the root of the *Murján* stone (Coral). It has a distinct identity. It is a hard substance, full of pores like the nests of wasps; and is found in the sea-shores in the kingdoms of Yemen, Ambán, Persia, Maldive and of the other adjacent islands. The *Basud*, mistaken by some people for a kind of sea-weed, is brought by the waves to the shore, where, with the help of air, it gets hard. To separate this stone from *Murján* with which it is often confounded, the following experiment will be found useful: Grind both the stones into fine powder and put each in a separate glass mixed with water. The vessel holding *Murján* will be found to contain gelatinous substances sticking to its bottom, whereas the one containing *Basud*, will show no such thing. The best specimens of *Basud* are red, clear, and have the reflecting powers of the looking-glass. The white varieties are good to look at. The black ones become very hard. *Basud* possesses heat of the 1st class, and dryness of the 2nd.

Marvellous and Medicinal Properties

USED as a medicine, *Basud* is a good astringent, and prevents excess of urine or motions It takes away the mischief making influence of the Devil over the human mind, cures all kinds of ulcers, epi lepsy, insanity (caused by the combination of phlegm and bile,) dyspepsia, gravels, spleen, piles, spitting of blood of all sorts, discharge of bloody mo tions, stoppage of urine, and so forth Half a *meskal*, i e, 2¼ *mashas* of *Basud*, mixed with half the quantity of the gummy substance produced by the *Neem* tree, and with the white of fowl's eggs, is an efficacious remedy for the spitting of blood, or for the enlargement of the spleen, &c, &c This stone takes off all fleshy protuberances caused by ulcers, and re moves all signs of them, when rubbed over the parts affected The powder, prepared from burnt *Basud*, hardens the gums and takes off the swell ing thereof As a *Surma*, it gives lustre to the eye and cures lachryma The powder got by burn ing the stone cures itch and prickly heat, if put in bathing water and poured over the body Mixed with balsam oil, it cures deafness, when applied inside the ears Spleen swollen body, worms and le- prosy can be got rid of by taking four *dangs* of burnt *Basud* with *Silun Zamin* But as its use may engender stomach diseases and give rise to troublesome belchings, it would be safe to put 4½ *mashas* of *Latira* into the compound Tied over

the abdomen, this stone is said to cure all diseases appertaining thereto If any one melts this stone with equal weight of gold and of silver, and wears a ring made of the melted stuff,—at the time when the sun and the moon approach the star called *Zohárá*,—he is safe from epilepsy and witchery, and will have no trouble in life If any one burns the black *Basud* and uses the powder obtained with the water intended for his bathing, he attains great physical strength

---

The Process of burning Basud

BREAK the stone into fragments and place these in a vessel made of *Courie* Put this vessel overnight in an oven such as is used by those who bake bread Take the pieces out in the morning and grind them thoroughly Care should be taken that the stone does not get destroyed by being burnt altogether, in consequence of its remaining inside an over heated stove.* For accounts of medicines that can be prepared with this burnt powder, *vide Kerabadin Kabir*

THE ESHUB.

Arabic, Hun ûl Busuf; Persian, Eshum.

Its Properties, Varieties, &c.

THE *Eshub*, sometimes called the *Eshut*, is a very hard stone, possessing, in different specimens, a variety of color. In the order of quality, the species known as *Já-e-oní*,—hard and clear as a looking-glass—comes first; next, *Subj-má-en-zu di*, the color of which is a compound of green and yellow; next, *Subj-má en Safédi*, a mixture of green and white; and the last, *Káfuri* or the white specimens.

The *Eshub* has the dryness of the 2nd class and is cool.

Marvellous and Medicinal Properties.

If taken internally, the *Eshub* drives away fear, increases the powers of the digestive organs, cures insanity, and monomania of that kind which puts the patient under the impression that he is being beaten and abused by all men, and impels him to return the compliments. If worn, it cures stricture and the vomitting of blood that comes out of the chest. If worn on the neck, it cures the spitting of blood issuing from the lungs at the time of coughing. Gravels can be got rid of by making the sufferer take one *dang* or the weight of 16 barley-corns of the ashes of burnt *Eshub*,

along with the white wine. If tied about the thighs of the woman under painful labor, it would help her to a speedy and easy delivery. If worn on the arms, it dispels enchantment and prevents the fear of lightning. It would ensure release from all bodily pains, if it could be worn, after an image of a man has been engraved upon it at the period when the Moon enters the *Búrj-átusi.* For the purpose of wearing, the quantity, prescribed by some, should represent 4½ *mashas* in weight.

OTHER KINDS OF STONES.

(1)

Arabic, Huzrúl Áhámur, Persian, Sung e Sorukh

LAÁL

The Láál is a variety of the Diamond and has the color of the roots of the Coral. The slightest dose of it is likely to be poisonous

(2)

Arabic, Huzrúl Ábabi, Persian, Sukur Sung and Sung e zukhum.

This stone is found among the stones in Arabia, and has the color of the tusks of the elephant. Rubbed into a paste and taken internally, it cleans the body and gives it a brightness It also stops vomitting blood If powdered and applied against all kinds of ulcers, it cures them entirely As a dentifrice it keeps the teeth clean and strengthens the gums

(3)

Arabic, Huzrúl Áshfá.

The best specimens of this stone possess a white color, and belong to the 2nd class of heat and dryness One of its chief virtues lies in its power of converting all watery substances into dry matter.

It prevents vomitting blood, and its powder cures all ulcers and the swollen parts of the body, if rub bed against them If taken with spirits of wine, or with any *Sherbets*, (dose, 2 *dangs*, or the weight of 32 barley corns), it proves to be a sovereign remedy for gravels or pallor

---

(4)

Arabic, Huzrŭl Ashakef

This stone is either red, black or yellow But whatever may be its external color, the stone will always show inside a mixture of black and sky-blue, when any of these gets broken It is both cold and dry Its powder has the same medicinal effects as the *Huzrul Áshfa* As this stone comes to be of constant use to shoe makers, it has been designated *Huzrŭl Ashákef*, the term *Ashakef*, in Arabic, meaning the shoe makers

---

(5)

Arabic, Huzrŭl Afroge or Huzrul Afrodi

It is a kind of stone which does not sink in water It is found in Islamboul (Stamboul?), in the Roman (Ottoman) Empire Its powder heals all ulcers, and as a dentifrice, it strengthens the teeth Taken internally, it has an astringent effect An internal dose of one *dang*, or the weight of 16 barley corns, is an antidote to poison by scorpion-bite, &c

---

(6)

Arabic, Huzrúl Áfrekí

THIS stone is neither too heavy nor too light in weight, and neither too hard nor too soft It has streaks of lines inside it It is found in Afrecia (Africa?) If with its qualities as to weight &c, as described above, it is found to possess an yellow color, the specimen is considered to be the best of all. It has the quality of dryness in a very little degree. Its burnt powder mixed with water cures all ulcers of the body, when rubbed over them. But if it be applied to painful parts, the pain will gradually increase. To guard against this fresh trouble, mix it with honey or spirits of wine. If the powder be mixed with wax, it will cure all ulcers caused by burns

(7)

Arabic, Huzrúl Andgáles.

IF rubbed in water, this stone will render it red like blood. It cures the swelling of eyes and lachryma, if applied to them, after being rubbed in milk taken from the teats

(8)

Huzrúl Báraki.

THIS stone is very much like the *cowrie.* Some specimens look like the palm of the hand, but they are very thin. The stone is said to be born of the

lightning, in such places as Kofá (?). When the lightning fluid falls on the water which fills up excavations and small holes in the ground, it floats on the water for some time and then sinks under it. The stone is found in these places when the water dries up perfectly. Dropsy and inflammation of the navel and of the whole stomach can be cured by means of this stone, if used in the following way:—Grind the stone into fine powder, mix it up with water and then dry it in the sun. Continue doing so till the powder soaks in four times as much water as was first put in; and then apply the powder round the navel, in the parts affected.

---

(9)

Huzrúl Báhárí.

This stone is white, round and hard. It contains a kind of "seed" inside, which makes a rattling noise when the stone is shaken. It is always found on sea-shores, and is considered by some to be a kind of sea-animal, cast up to the shores by the waves, when it is dead. But nothing definite has yet been known of the thing. It cures gravel, when taken in quantities weighing two *dange*, or 32 barley-corns.

---

(10)

Huzrúl Bohirá.

THIS is a stone of a black color, and is so thin that, by the slightest contact with fire, it becomes hot. It has no healing properties in itself, but in conjunction with proper medicines, it is found to be efficacious in curing ulcers and swellings of any part of the human body.

---

(11)

Huzrúl Baram.

THIS is a black stone, found in Khorassan. Taken internally, it cures the spitting of blood. As a dentifrice, it strengthens the gums.

---

(12)

Huzrúl Bar.

THE *Bar* is a white, round, and clear stone, found in the seas in the county of Hejaj (?). If rubbed a little in water and taken, it brings on copious urine. Tied over the bladders, this stone can bring gravels out of persons suffering therefrom, with the urine which it renders free and clear. A similar kind of stone is found inside the mother-o'-pearl in the oceans in Jiddah. But it is black and very much inferior to the *Bar*. No one has yet examined the properties of this stone.

---

(13)

Huzrûl Bukur or Khuzrawol Bukur; Hindi, Gaudahan.

This stone is found inside the "Bile" of the cow. In size and color, it is like the yellow of the fowl's egg. It tastes very bitter. When it is taken out of the stomach of the cow, it gets dry and becomes very hard. It also assumes a black color and gets wrinkles all over its body. This stone is sometimes long, or round or triangular in shape. It can be converted into any shape, when taken out of the stomach where it remains very soft. Its weight ranges between one and four *meshkals*. The virtues of such of the stones as are born in the teats of the cows have been fully described in the work known as *Fâd-e-zuhur*. The existence of this stone in the body of cows is traced by their general outward symptoms. Such cows as have the stone in them get gradually emaciated; the color of their bodies becomes yellow, that of their eyes, yellow and white, and they keep constantly bleating. Of the animals so affected, only one or two per cent. happen to have the stone inside their stomach. The best specimens of these stones are large and hard.

Huzrûl Bukur belongs to the 2nd class of dryness and heat. But *Halim* A'ltâki (?) places it in the 2nd class as regards dryness, and in the first, as regards heat.

Its Medicinal Properties

Huzrūl Bukur is less powerful in the art of healing than the stone called *Huzrul Tis* It cures all boils, swellings, ulcers and gravels, as well as exces sive discharge of urine and menses It also relieves the disease which is known to affect the left thighs of little children in Bengal and in the North West ern Provinces of India, and which is designated in Persian as *Radba o Khafa e habid* If applied to the eyes by itself or with other medicines, it im proves the vision and cures lachryma Rubbed over the body, it cures piles, ulcers, and white leprosy, and other discolorations of the skin It brings on speedy relief from prickly heat, itch, and other skin eruptions, if it is ground with a little quantity of water, (in which the spice *Dhonid* has been kept for some time), and then applied to the body In order to make hairs, grown gray with white leprosy, resume their natural color, root them out of the head, and put thereon the paste obtained by rubbing the stone with spirits of wine It stops lachryma, if a particle of it, of the size of a lentil, mixed with the juice of the vegetable called *Chekend*, is taken into the nostrils as a snuff If two bits of it (each of the size of a lentil) be taken, after bathing, with some laxa tive, for some days, and be accompanied with the diet of the flesh of strong and plump fowls and kids, the patient must ere long become a strong fat man

Head complaints are sure to follow, if the internal use of this stone is not attended with that of *Katirá*. Doses of two *kirats* (sixteen *mashas*) and one *meskhal*, (*i.e.*, 100 wheat-corns) are poisonous in their effects. The stones that are taken out of the bile of the cow are productive of better results than those found in the heart of that animal.

---

(14)

Huzrúl Belldor.

THIS well-known stone is white and clear as looking-glass It is harder than lead. It can be worked into cups, drinking glasses, plates and lenses for microscopes, &c. Kept close to a person, it prevents his dreaming bad dreams and being a subject to sudden starts while asleep and dreaming. Gazed upon fixedly for some time, this stone cures lachryma. Rubbed over the teats of women, in which the milk has dried up, it brings on a copious flow. It becomes very clear after being steeped in sheep's milk for some time. Cut round, with a thick point in the centre, and gradually thinned down the sides and then fixed on the openings of the microscrope, it helps one in looking over a great distance. If a glass is cut in a similar manner and used with the same view, it serves the same purpose.

भारतवर्षका जहरीलोगोंका मत।

वर्तमान जहरी लोगोंका मतके अनुसार चौराशी सङ्गका विवरण लिखा जाता है। जहरी लोग पत्थरको सङ्ग कहते है, लेकिन जहरी लोगोंका एक जुदा मत या कोइ प्रसिद्ध ग्रन्थ नहि है। उनलोग संस्कृत, आरवी और पारसी ग्रन्थसे थोड़े थोड़े मत लय करके एक मत खाड़ा किया; इसका प्रमाण यही की उनलोग जो सव नाम आदि व्यवहार करते हैं, तिसका कोइ कोइ संस्कृतमूलक, कोइ कोइ आरवीमूलक और कोइ कोइ पारसीमूलक, कोइ कोइ नाम उनलोग अपनेका भाषामे प्रस्तुत कर लिया। जहरीलोग जीस चौराशी सङ्गका नाम कहते है, कोइ एक जहरी यह सवका वयान करणे नहि शके। इस कारण हमने वहुत् अनुसन्धान करके आरवी आदि वहुत् जातका जहरीलोगके पाशसे यही चौराशी सङ्गका विवरण संग्रह किया। लेकिन इस माफिक होनें शके की एक जातका सङ्गका दोनो भाषामे दोनो नाम भये, इसके कारण यही हैं, की भिन्न भिन्न जातका जहरीके वातके उपर एकौक करके हमने यह सव विवरण लिखा हैं।

भारतवर्षके जहरीलोग चौराशी प्रकारका सङ्ग कहते हैं, लेकिन इटालीयान आदि इउरोपका जात जो सव सङ्ग संग्रह किये हैं, उसका संख्या चौराशीसे वहुत् ज्यादा होता हैं। भारतवर्षमे चौराशी सङ्गका नाम प्रचलित

THE VIEWS OF THE MODERN HINDUSTHANI JAHARIS (JEWELLERS).

The Eighty-four Sungs.

It would appear from what has been gathered from the Hindustani jewellers of the day that nothing like original authoritative views on jewels were known among them from time immemorial. The views of the modern jewellers are based partly on Sanskrit, partly on Arabic, and partly on Persian authorities, supplemented by their own opinion, arrived at by practical experience, as to the value, quality, or defects of gems. These views have come down by tradition from generation to generation and are now accepted as the recognised opinion of the Hindusthani jewellers. The names of the gems enumerated by them are, for the aforesaid reason, found in some instances to be in Sanskrit, in some other, in Persian or Arabic, and, in a great many, in Hindi, or a dialect of their own.

The Italians and other nations of Europe have collected a much larger number of precious stones than those enumerated by the jewellers of Hindusthan. The term by which modern jewellers designate jewels and stones is called *Sung*. The number of *Sungs* known to the jewel-merchants in this country and in use among them is eighty-four. These are the species that the Emperor Humayun of Delhi was able to collect and with which Shah

होनेका यही कारण है, की दिल्लीका पातसा आकबरके पिता हुमायुन पातसा इंराजी १५४५ या ४६ सालमे हीरा आदि सङ्गका संग्रह करणेको मन करके यङ्गत् अनुसन्धानसे चौराशी प्रकारका सङ्गसे अधिक संग्रह करणे नहि शके, इस कारण सो तक भारतवर्षमे चौराशी सङ्गका नाम उल्लेख देखा जाता है। बाद उसके इंराजी १६५८ सालमे साहजान पातसा जिस वक्त आग्रामे ताजमहल नाम करके एक समाधि-मन्दिर अपने बेगमका कबर पर बनाया, तिस वक्त अपने परदादाके संग्रह किये तिस चौरशी सङ्गसे तिस समाधि-मन्दिरके देवाल पर नाना रकमका वृक्ष, लता, पशु और पक्षी आदिका प्रतिमूर्त्ति बनायके अपने अतुल ऐश्वर्य्यका, बेगमका उपर अलौकिक प्रणयानुरागका और भारतवर्षके कारिगर लोगोंका कारिगरिका शेष सीमा देखाय दिया। आभि तिस सब सङ्गका अधिक भाग कालका उदरमे पड़के वही समाधि-मन्दिरका शोभानाश किया।

जहरीलोग पहिले सब रत्नको दुइ भाग करते हैं। जिस सब रत्नके भितरसे आला नेकालते है, उसको बीड़ और जिस सब रत्नके भितरसे आला नहि नेकालते है, उसको गदुद कहते हैं। यही दोनो भागको फेर कसमे आवल, कसमे दोयेम और कसमे सेयम यही तिन श्रेणीमे विभाग करते हैं; नौ रत्न कसमे आवल, सेवाय नौरत्न जिस सब पत्थर गहनेमे व्यवहार होते है, तिस सब कसमे

Jehan decorated the *Tajmehal*, with mosaics representing the figures of birds, animals, trees, and so forth, thus giving evidence of the vastness of his wealth, the depth of his regard for the Empress, and the extraordinary skilfulness of the Indian artists. The cruel hand of time has now defaced much of the beauty and splendour of the *Tajmehal*, by causing the disappearance of most of the stones that formed the mosaics. The names of the eighty-four *Sungs* which have presently been collected from Hindusthani jewellers will be found in due course. In consequence of the inability of any single jeweller to enumerate all the eighty-four specimens, they have been collected from a variety of sources, and it is therefore not unlikely that among these eighty-four kinds there might be some which have in one place been set down by their Hindi names and in another by their Persian designations.

Jewellers divide gems and stones into two classes, *viz.*, *Bir* and *Gudúd*; *i.e.*, transparent and opaque. These two kinds are subdivided into three classes, *viz.*, *Kusme A'val*, *Kusme Doyem*, and *Kusme Seyum*. The nine precious gems as recognised by Sanskrit authorities come under the head of *A'val*. Other stones used in jewelry come under the class *Doyem*; and the rest, out of which cups, mortars, pestles, and the like, are made, come under the designation of *Seyum*.

With the exception of the Pearl, Cat's-eye and Coral, all stones are generally cut into any of the

दोयेम और ततूसेवाय जिस् पत्यरसे कटोरा, खल आदि बनावते है, तिस सब कामसे सेयम श्रेणीभुक्त होता है।

मोति, लसुनिया और मुङ्गा सेवाय और सब रत्नके कुतवी, आठोंयास, सोंरो और गेर्द्दा यही चार घाट होता है। आयतक्षेत्र या वर्ह्निके समान चौकोणा घाटको कुतवी घाट; आठकोणा घाटको आटोंयास; देखनेमे पानके समान, लेकिन नीचेमे थोड़ा चौड़ादार घाटको सोंरो घाट और गोल घाटको गेर्द्दाघाट कहते है। कुतवी घाट ठिक चौकोणा होनेसे उसको चौखोंटा कहते है। जिस आठोंयास देखनेमे प्राय करके गोल है, उसको ठासा आठोंयास और जो आठोंयास लम्बापन है, उसको तुला आठोंयास कहते है। सोंरो घाट तेकोणा होनेसे तेकोणा सोंरो और ठिक पानके समान होनेसे पानघाट कहते है। गेर्द्दा घाट वादामका समान होनेसे वादामचा घाट और थोड़े लम्बा होनेसे तूलानी घाट कहते है।

१ हीरा।—गोलावी, यनसति, नीलवज्र, वसन्ती, गदच (अत्यन्त कड़ा हीराको गदच कहते है, उसके उपर आखके क्रानीके समान दाग रहते है, उसको चाल या चवरक कहते है, नरम हीरामेभी काटनेके दोषसे चाल होता है, यह अति खाराप, वह दोषयुक्त हीरा मृत्युकी कारण है), कलठी, सफेद, भूरा, पीला, काला, कक और

four shapes or *ghâts, viz., Kutbí*, or the oblong shape; *A'ṭhonyás*, or the octagonal; *Sonro*, or the shape of the heart, and *Gerddá*, or the circular shape. The *Kutbí* is called *Choukhontá*, when the stone takes the shape of a square. The *A'ṭhonyás* is called *Ṭhás A'ṭhonyás* when the facets of the octagonal cut are so small as to render the surface almost circular, and *Túlá A'ṭhonyás* when the stone is cut into an octagonal figure a little elongated. When the *Sonro* becomes almost triangular, the cut is said to be *Tekoná Sonro;* when it takes exactly the shape of a *pán* or betel-leaf, the cut is called *pán ghât.* When the *gerddá* takes the form of a *Bádám* or almond, the cut is known as *Bádámchá;* when it is oval, the cut is called *Túlání Ghát.*

1. *Hírá*—The following are the varieties of the Diamond:—*Goláb*í (rose-red); *Bunuspati* (green); *Nil Bajra* (Blue Diamond); *Basanti* (yellowish white); *Guruch* (a very hard Diamond,) with a thin skin called *chál* or *Abruck* on the surface. Such coating may be taken by soft Diamonds owing to the unskilfulness of cutters. The wearer of a Diamond defective in this respect is liable to death. *Kulṭhí; safed* (white); *Bhúrá* (ash-colored); *Pilá* (yellow); *Kálá* (black as ink); *Kuf* (of the color of the catarrhal mucus); and *Yogiá.*

योगिया हीरेकी यही कय जात है। पछना, छिटा, गाढ़ा और धूमर यही चार प्रकारका अयेव हीरामें होता है। हीराके भितरमे जो चिर देखा जाता है, उसको पछना अयेव कहते हैं। हीराके भितरमे कालापन लिये ऊये सूखी जो दाग रहते हैं, उसको छिटा अयेव कहते हैं, यही छिटा शुद्ध काला होनेसे काला छिटा, शुद्ध लाल होनेसे लाल छिटा, या लाल दोष और पांसको समान होनेसे भूरा छिटा कहते हैं। हीरेके बीचमे गर्त्त रहनेसे उसको गाढ़ा अयेव कहते हैं। हीरामे इसमाफिक छिटा रहते हैं, की वह छिटाको कोइ वक्त देखा जाता है और कोइ वक्त देखा नही जाता है, उसको धूमर अयेव कहते हैं। जिस हीराके कट समान नहि होता है, उसको खंदीला कहते हैं, यहभी अयेवके बीचमे गिन्ति है। हीराके खोटा तुरमुलो।

२ माणिक।—चोलावर्ण (खुब लाल), बिनौसी (थोड़े कालापन, यह अति खाराप), सान्नावत (चिरदार खाराप), गुलगु (जरदपन), आतुलसी, आतसी और खयरा (कायके समान रङ्गदार), यही कय जातका माणिक होता है। चिर (फाटा), दुधक (दुधके सरका माफिक दाग),

The following four defects in the Diamond are recognised:—

(*a*) *Puchhná, i.e.*, the fissures observed inside the Diamond.

(*b*) *Chhitá, i.e.*, the red spots (mixed with black) observed inside; *Kálá chhitá, i.e.*, the black spots seen inside; *Lál dosh*, the red spots; *Bhúrá chhitá*, the ash-colored spots.

(*c*) *Gáṛá, i e.*, holes observed on the surface of the Diamond.

(*d*) *Dhúmur, i.e.*, very minute spots visible at times in any portion of the Diamond. According to some jewellers, *Khunrílá*, or irregularity in the cutting of the facets, is reckoned as one of the defects of the Diamond.

The *Turmulí* sometimes passes muster for the Diamond.

2. *Mánik*—*Cholábarna* (deep red); *Binausí* (red with a tinge of black)—a defective specimen; *Tánjávat*, with fissures —a defective specimen, *Gulgun* (with a shade of yellow); *A'tlasi*; *A'lasí*; *Khayrá* (of the color of the catechu).

The following defects are recognised in the Ruby. *Chir* (fissures); *Dudhuk* (milky imperfections); *Abruk* (scales like those of the talc); *Dábhá* (absence of "water"); *Binausi*; *Párek*, (fissures and milky imperfections combined); *Jutlá* (the presence of a yellowish hue in addition

अभ्रक (अभ्रके समान दाग), डाभा (पाणि ना रहना), पारेख (दुधकके साथ चिर), विनोगी (कालापन), जटला (अयेवके भितरमे जरद्-पन), जावला (अयेवके भितरमे गोलावी या कालापन) यही कय प्रकारका अयेव माणिकमे है । माणिकके खोंटा नरम ।

३ लशुनिया।—कणकचेत (बिल्लीके आंखके समान रङ्गदार), धूमचेत (धोंयेके समान रङ्गदार), श्यामचेत (काला), घिउचेत (घिउका समान रङ्गदार), कलकेत्ताका (नया खानका), चाड़िया (वेसूती), लशुनियाका यही कय जात है । चिर, चादर, और गदर यही तिनो प्रकारका अयेव लशुनियामे है । सूत सब जगहमे होनेसे चादर अयेव और कोइ स्थान स्वच्छ, कोइ स्थान अस्वच्छ होनेसे गदुर अयेव कहते है । लशुनियाका खोंटा कर्कतक ।*

४ मोति ।—मियानी (कालापन), सुरमइ (थोड़े काला-पन), घूणाखाड़ी या तामची (लालापन), पुरवी या कुडकुड़ (छोटे और नागोल), कचिया (मयला), बिरेहीन (सीसाके समान रङ्गदार), काहेल (खुब सफद, वसरामे होता है), सिंली वसरा (पीलापन), टुटगुडी (थोड़े

* कलकेत्तामे रहनेवाला राजा राजेन्द्रनाथ मल्लिकके मोकाम पर एक दोरङ्गा लशुनिया है, इसमाफिक लशुनिया धयेवो, यह धयेवसे बहुत हानि होता है. वह राजाके एक लेड़का यह लशुनियेको पहेरनेसे मर गये। कोइ कोइ लशुनियामे हरफ रहते ह, यही ग्रन्थकारके पाम एक लशुनिया है ; उसमे (S) इंराजी एस देखा जाता है। यही हरफ ग्रन्थकारके नामके पहिले हरफ है।

to any defect); and *Járlá* (the presence of rose-red or black color in addition to any defect).

The *Nurum* sometimes passes muster for the Ruby.

3. *Laśuniyá*—*Kanak-kshet* (like the eye of the cat); *Dhúm-kshet* (smoke-colored); *Syám-kshet* (black); *Ghiu-kshet* (of the color of the *ghee*); *Kalcuttáká* (born in the new mines); and *Háriyá* (having no "lines").

The following are the defects of the Cat's-eye;—*Chir* (fissures); *Chádur* ("lines" covering all the surface); *Gadur* (transparency in some portions and opacity in others).*

The *Karketaka* sometimes passes muster for the Cat's-eye.

4. *Moti*—*Miyáni* (blackish); *Surmayí* (a little blackish); *Chundkhári* or *Támchí* (with a tinge of red); *Purabí* or *Kurkur* (small-sized and not perfectly round ones); *Biherín* (lead-colored); *Kachiyá* (pale-colored); *Kdhel* (very white, and found at Bussorah); *Singlí* (yellowish); *Tutgurí* (bluish); and *Jáddám khári* (greenish).

The following *ghâts* or cuts are approved; *viz.*, *Sirá*, *Gol*, *Kumur*

* Bi-colored Cat's eyes have inauspicious properties in them. One such specimen is in the possession of Rajah Rajendra Mullick of Chore-bagan, Calcutta. This stone is alleged to have caused the death of his third son who used to wear it.

The author of this work has in his possession one Cat's-eye which bears upon its surface the mark of the letter S, the first letter of his initials

नीलापन), और जादाम खाड़ी (सबुजपन), यही कय जातका मोति होता है। सीरा, गोल, कमर और पारा मोतिका यही चार घाट है। यही चार घाटका पाच पांच भेद होके बिश रकम होता है। बिश रकम मोतिका नाम, (१) कुलकी, (२) सीरा, (३) चौथ सीरा, (४) सुजनी, (५) गाभा, (६) खड़ीगाभा, (७) तीरगाभा, (८) आ, (६) कमड़, (१०) खड़ी कमड़, (११) ठेठि कमड, (१२) वटला, (१३) आनसा, (१४) सिरिट आनसा, (१५) चिकनि आनसा, (१६) चिपटी आनसा, (१७) पारा, (१८) चुखा पारा, (१६) कड़ा पारा, और तिलिया (२०)। गरज (गर्त्तके समान बड़े दाग), लहेर (छोटे गर्त्तके समान दाग), भड़कन (कोइ जगहमे बड़े गर्त्त कोइ स्थानमे छोटे गर्त्त), चोड़ा (अति छोटे छोटे गर्त्त), घद्दत् (टोलपडा) ; यही कय प्रकारका अयेव मोतिका है। तामची और टुटगुड़ी यही दो जातका मोति आच्छा है, लेकिन काहेल : जातका मोति सबसे आच्छा और उमदा है। मोतिका खोंटा विलाती मोति।

५ गोमेद।—गोमेदका एकी जात है, चिर, चिटा और अबरकी यही तिन प्रकारका अयेव गोमेदमे है। गोमेदका खोंटा तुरपाना।

and *Párá*. Each of these four cuts is divided into five classes.

The following are the names of the twenty kinds into which Pearl is thus divided:—1, *Kulkí*; 2, *Sírá*; 3, *Chauth-Sírá*; 4, *Sujní*; 5, *Gábhá*; 6, *Kharí Gábhá*; 7, *Tír-Gábhá*; 8, *A'n*; 9, *Kumur*; 10, *Kharí-kumur*; 11, *Thethi-kumur*; 12, *Butlá*; 13, *A'nsá*; 14, *Sinti-A'nsá*; 15, *Chikni-A'nsá*; 16, *Chipti-A'nsá*; 17, *Párá*; 18, *Chukhá-párá*; 19, *Kará-Párá*; 20, *Tiliyá*.

The following are the defects: *Guruj* (holes on the surface); *Laher* (small holes); *Bhurkun* (both large and small holes); *Chorá* (very small holes); *Ghurut* (depression in portions).

The *Támchí* and *Tutgurí* specimens are good. But the *Káhel* is the best of all specimens.

The *Belátí moti* (or the imitation Pearl that comes out from Europe) sometimes passes muster for the genuine Pearl.

5. *Gomed*—There are no varieties of the Zircon. *Chir*, *Chhitá* and *Abrukí* are the defects observed in this stone.

The *Turshává* sometimes passes muster for the Zircon.

6. *Mungá*—There are no varieties of the Coral. The mixture of any color with red (which is its true color) is reckoned to be a defect in the Coral

६ मुङ्गा।—मुङ्गाकाभी एकी जात है। इसके लाल रङ्गका साथ दोयरा रङ्ग मिश्रित होनेसेभी इसका अयेव होता है। मुङ्गाका खेंाटा काइरवा।

७ पान्ना। पुराणी, मरगजका, टोड़ेका, पेयालेका, नया और जाहाजी, पान्नेका यही कय जात है। जहरी लोग यही कय जातका पान्नाको काही और धानी यही दोनो भागमे विभक्त करते है। कालापन लिये ऊये सवुज रङ्गदारको काही और पीलापन लिये ऊये सवुज रङ्गदारको धानी कहते है। इसके वीचमें धानी आच्छा और काही खाराप है। चिर, रेखा, आवरकी (धूमके छाया), गांभा (वङ्गत् अयेवदार पाणि), वाहिनी (वनानेक फिकिरसे अयेवका छापाना), डाभा तरकिव (मकड़ीका जालका समान दाग), पान्नेमें यही कय प्रकारका अयेध है। पान्नेका खेंाटा पयग्रु।

८ पुखराज।—सफेद, जरद और नीला यही तिन जातका पुखराज होता है। माणिकमे जो जो अयेव है, सो सव अयेव पुखराजमेभी है। तत्सेवाय योगिया और दोरङ्गा यही दोनो अयेव है। जरद रङ्गका भितरसे लाल आभा निकल्नाको योगिया और आधि जरद आधि दोयरा रङ्गदारको दोरङ्गा अयेव कहा जाता है। पुखराजका खेंाटा सोणेला।

The *Káharbá* sometimes passes muster for the Coral.

7. *Pánná—Purání; Murgujká; Toreká; Peyále-ká; Nayá* and *Jáhájí.* Each of these varieties is divided into two classes, *viz.*, *Káhí* and *Dhání.* The former represents such specimens as have a tinge of black in the green of the stone; the latter, such as have a tinge of yellow in the green. The latter specimens are admired.

The following are the defects of the Emerald:—

Chir; *rekhá* (streaks); *Ábruki* (a shade of smoke); *Gánjhá* (imperfection in the "water," such as the presence of bubbles, &c.); *Báhiní* (natural imperfections hidden by the ingenuity of the setters or cutters); *Dánbhá* (marks somewhat like the spider's web, on the surface).

The *Paygu* sometimes passes muster for the Emerald.

8. *Pukhráj—Safed* (white), *Zurud* (yellow), and *Nilá* (blue).

The defects recognised in the Ruby are also recognised in the Topaz. Besides, there are two other defects, *viz.*, *Yogiyá*, (presence of a tinge of red with the yellow) and *Dorungá* (presence of yellow in certain parts and of some other color in others).

The *Sonelá* sometimes passes muster for the Topaz.

९ नीला।—पुराणा और नया नीलाका यही दोनो जात है। यही दोनो जातभी सबुजपन लिये ड़ये नीला, लालपन लिये ड़ये नीला और खुब नीला यही तिन भागमे विभक्त है। नीलाका खोटा लीली।

१० पारस।—इसका रङ्ग काला, संस्कृतमे इसको 'स्पर्शमणि' कहते है, यह पत्थरमे पलिस आच्छा नहि होता है।

११ लालड़ी।—माणिकके जात, इसका रङ्ग गोलाव फुलके माफिक लाल, ओजनमे २४ रतिके वेशी होनेसे इसको लाल कहते है।

१२ लीली।—नीलमका जात, लेकिन नीलमसे नरमपन, इसमे थोड़ा जरदी मालुम होता है।

१३ तुरमुली।—इसका रङ्ग सब प्रकारका होता है, लेकिन हालका, यह पत्थर पुखराजके जात, लेकिन पुखराजसे नरम होता है।

१४ तुरयावा।—इसका रङ्ग गोलावीपन लिये ड़ये जरदी होता है, यह पत्थर वड़े नरम है।

१५ सोणेला।—पुखराजका जात, लेकिन पुखराजसे नरम और इसका रङ्ग सोणेका माफिक होता है।

१६ धोनेला।—सोणेलेका रङ्ग धूंयके समान होनेसे धोनेला कहा जाता है।

१७ नरम।—माणिकका जात, इसका रङ्ग जरदीपन लिये ड़ये सुख होता है।
9. *Nilá—Puráṇá* and *Nayá*. Each of the two varieties is divided into three classes, *viz.*, *Subj-pun Nilá* (with a tinge of green); *Lál-pun-Nilá* (with a tinge of red); and deep-blue.

The defects peculiar to the Ruby *are also recognized* in the Sapphire.

The *Láli* sometimes passes muster for the Sapphire.

10. *Páras*—Sanskrit name, *Sparśa-maṇi*. Color, black. This stone does not admit of good polish.

11. *Lálri*—A variety of the Ruby. Color, red, like that of the rose. It is called *Lál*, when it exceeds twenty-four *rutties* in weight.

12. *Láli*—An inferior variety of the Sapphire. It shows a faint tinge of yellow.

13. *Turmuli*—An inferior variety of the Topaz. It is found to be of various colors, but all of a light description.

14. *Turshává*—A very soft stone. Color, yellow, with a dash of reddishness.

15. *Soṇelá*—An inferior variety of the Topaz. Color, golden.

16. *Dhonelá*—The *Soṇelá* is called by this name when it shows the color of the smoke.

17. *Nurum*—A variety of the Ruby. Its color is a mixture of red and yellowishness.

१८ सिंदूरिया।—इसका रङ्ग सफेदपन लिये ऊये गोलावी होता है।

१९ कठेला या जामुनिया।—इसका रङ्ग लालपन लिये ऊये काला होता है।

२० तामड़ा।—इसका रङ्ग कालापन लिये ऊये सुर्खी होता है।

२१ सङ्गेसम।—इसका दुइ जात है, सवुजपन लिये ऊये सफेद रङ्गका होनेसे अङ्गुरी और सफेद होनेसे कर्पूरी कहलाते है, लेकिन कर्पूरी अच्छा है।

२२ सङ्गगोरी।—इसका रङ्ग सब प्रकारका होता है, सङ्गके उपर सफेद सूत देखा जाता है। जहरी लोग इससे कटोरा और ओजनका बाटखारा बनावते है।

२३ हकिक।—इसका रङ्ग सब प्रकारका होता है। इसके कटोरा, खेलाना और छड़ि इत्यादिका मुठ बनावते है।

२४ इमनी।—इसका रङ्ग थोड़े सेहापन लिये ऊये घोर लाल होता है, मुसलमान लोग इसका बऊत् तारिफ करते है। महम्मद सा पातसा एक इमनी पत्थर ५०० रुपेयामे खरिद कियाथा, उसका ओजन १० रति, पातसा कोइ जहरीको उसका परीचा करणेकेवास्ते ऊकुम दिया, लेकिन जहरी पातसाको कहा, की आप इसका परीचा

18. *Sindúriá*—Its color is rose-red with a tinge of white.
19. *Kathelá* or *Jámuniyá*—Its color is black with a tinge of red.
20. *Támrá*—Its color is red with a tinge of blackishness
21. *Sung-e-shum*—It is divided into two classes. *Anguri* are those of which the color is white with a mixture of green; *Karpúri*, those that are purely white. The latter specimens are better than the former.
22. *Sung-gori*—It is found to be of various colors, having streaks of white on the surface. Jewellers carve cups and scale-weights out of them.
23. *Hakik*—It is found to be of various colors. Toys, cups, handles of sticks and other such things are carved out of this stone.
24. *Imní*—Its color is deep red with a tinge of blackishness. It is much admired by the Mahomedan nobility. It is said that the Emperor Mahomed Shah had once purchased a piece of *Imní* of ten *rutties* at 500 Rs. and given it to a jeweller to be tested. The jeweller asked the Emperor to test it himself, and directed him to tie round it a piece of thread and throw it into the fire. This being done, it was observed that the thread did not catch fire at all. Upon seeing the result of his experiment, the Emperor exclaimed to the people present—"Behold the way in which this stone should be tested."

किजे,पातसा जहरीका बात शुनके उसके उपर एक सूत जड़ायके आगमे फेक दिया, लेकिन वह सूत आगमे ज्वला नहि, यह देखके पातसा सब आदमीको कहने लगे, की देख, इसका परीचा यह माफिकसे होता है।

२५ पीटक बुभावा।—फटिकका जात, इसका रङ्ग सफेद, इसका पीछे एक गोलाव फुल राखनेसे सामनेभी वह गोलाव फुलका रङ्ग देखा जाता है। राय लछमीप्रसाद सिंह बाहादुरका मुरसिदावादके ठाकुरका मोकाममे एक फटिकका देवमूर्त्ति है, उससे इसको उत्तम परीचा होता है।

२६ सङ्गराट।—पान्नेका जात, इसमे आच्छा पलिस नहि होता है, यह पत्थरमे रेकाव, कटोरा आदि वनावते हैं।

२७ गौदन्ता।—इसका रङ्ग गौके दातके माफिक थोड़ा जरदीपन लिये ऊये सफेद होता है।

२८ गौङ्गली।—माणिकका जात, इसका रङ्ग सेहाइ और सुखी मिला होता है।

२९ सोलेमानी।—इसका रङ्ग काला, लेकिन इसके उपर सफेद डोरा डोरा रहते हैं, हिन्दी और इंराज लोग इसको वऊत पसन्द करते हैं।

३० आलेमानी।—सोलेमानी भुरारङ्गदार होनेसे आले-मानी कहते है।

25. *Pituk Bujhábá*—A variety of the Crystal. Color, white. This stone shows forth in the front a rosy hue if a rose is placed behind it. The Crystal image of the idol set up by Rai Luchhmiput Sing Bahadoor, in the temple at Moorshedabad, is the best specimen of this species of stone.

26. *Sung-rát*—A variety of the Emerald. It does not admit of good polish. Circular plates, cups, &c., are formed out of this stone.

27. *Gau-dantá*—Its color is white, with a yellow tinge resembling the teeth of the cow.

28. *Síngli*—A variety of the Ruby. Its color is a compound of red and black.

29. *Solemáni*—Color, black, with white streaks. It is much liked by the Europeans and the Jews.

30. *A'lemáni*—The *Solemáni* is called by this name when it has an ash-like color.

३१ हजरलयक़ या हाउवेर।—इसका रङ्ग माट्टिके माफिक, पेशावका वेमारीमे यह पत्थरसे वज्ञत फयदा होता है।

३२ तेलिया।—इसका रङ्ग काला, और इसका उपर तेलका माफिक चिकना रहते है।

३३ बिलोर।—इसका रङ्ग सफेद, इंराज लोग इसको क्रिष्टल कहते है, इससे झाड़का साज होता है।

३४ वेरुज।—इसका रङ्ग पान्नेसे वज्ञत् हाल्का सबुज होता है, इसकी खनि हिन्दुस्थानमे टोंटटोदामे है। कोइ कोइ आदमी वेरुज और टोडा इस दोनोको एक जात कहते है, लेकिन टोड़ेका रङ्ग जरदीमायेल होता है।

३५ मरगज।—पान्नेका जात, इसका रङ्ग वज्ञत् आच्छा सबुज होता है, लेकिन इसमे पाणि आच्छा नहि होता है। इसकी किमत पान्नासे वज्ञत् कमती होता है। खानभी पान्नाके खानसे आलक होता है।

३६ हदिद।—इसका रङ्ग भुरापन लिये ज्ञये सेहा और इसकी ओजन भारी होता है, मुसलमान लोग इसका मालासे जप करते है।

३७ सङ्गमूषा।—इसका रङ्ग सफेद, माट्टिया और चुयाके माफिक होता है, इससे कटोरा और खल वनायते है।

31. *Huzrul-Yáhu* or *Háuver*—Its color is like that of the clay. It is a good remedy for diseases of the urine.

32. *Teliyá*—Color, black. It has a sleeky appearance, such as is shown by things rubbed over with oil.

33. *Bilor*—Color, white. It is called Crystal by the Europeans. It furnishes the materials for chandeliers and the like.

34. *Berúj*—Its color is much lighter than that of the Emerald. Its mine is situated in the country of *Tont-tord*, in Hindusthan. According to some jewellers, *Berúj* and *Torá* belong to the same class of stone. The latter, however, shows forth a tinge of yellow.

35. *Murguj*—A variety of the Emerald, of a beautiful green color. But it does not possess what is technically called a very pure "water." It has a larger number of mines, and fetches much less value than the Emerald.

36. *Hadid*—Its color is black with a mixture of ashiness. This stone is very heavy in weight. Beads for rosaries are made out of it.

37. *Sung-Músha*—Color, white, or like that of the mud or of the mouse. Cups and mortars for grinding medicines in are formed out of it.

३८ सङ्गढेड़ी।—इसका रङ्ग काला होता है, इससे खल, कटोरा और तलवारका मुट बनावते है।

३९ पितोनिया।—इसका रङ्ग सवुजकी उपर सुर्खी छिटा-दार है।

४० दाहनफिरङ्ग।—इसका रङ्ग पेस्ताके माफिक थोड़ा सवुज होता है, मुसलमान लोग इससे माला बनावते है। इसके तिन जात है, लोकराइ, मिश्रराइ और तेलियाइ। इस्रातके उपर नेवुका रस देके घिसनेसे जिससे तांबेका समान रेखा पड़ते है, उसको लोकराइ, जिससे चांदीका समान रेखा पड़ते है उसको मिश्रराइ और जिससे सोणेका समान रेखा पड़ते है, उसको तेलियाइ कहते है।

४१ सङ्गसीमाक।—इसका रङ्ग लाल, जरद और थोड़े वेङ्गमायेल होता है, इसके उपर सफेद, जरद और गोलावी छिटा रहते है, इससे खल और कटोरा बनावते है।

४२ सङ्गमरवर।—इसका रङ्ग पांसका माफिक होता है, यह पत्थर मोकराणागाढ़ामे बहुत पयदा होके जयपुरमे आते है, इसका रङ्ग लाल और सफेद मिला होनेसे मोकराणा कहते है।

४३ सोहानमखी वा सोणामखि।—इसका रङ्ग लीला होता है, लेकिन इसमे आच्छा पलिस नहि होता है।

38. *Sung-Dheri*—Color, black. Mortars, cups and hilts of swords are formed out of this stone.

39. *Pitoniá*—Color, green, interspersed with dots of red.

40. *Dáhun-firung*—Its color is green like that of the Pestachio nut. Beads for rosaries are made out of it. This stone consists of three kinds. Put a few drops of lemon-juice over a piece of steel, and rub this stone over it. If the mark, produced by rubbing it, is found to be of the color of copper, the stone should be considered as belonging to the *Lokrái* kind; if the mark be of the color of silver, the stone should come under the class *Misrái;* if the mark be of a golden hue, the stone should be designated *Teliyái.*

41. *Sung-Simák*—Its color is either red, yellow, or blackish. Dots of white, yellow or red, are observed on this stone. Cups and mortars are formed out of it.

42. *Sung-Murbur*—It has an ash-like color. It is found in the mines of *Mokráná-gárá* and brought over in large quantities to Jeypore. When its color is observed to be a mixture of red and white, it assumes the name of *Mokráná.*

43. *Sohánmakhi*—Color, blue. This stone does not admit of good polish. Dots of a golden color are observed on some of the specimens.

कोइ कोइ सोहानमखीमे सोणेका छिटा देखा जाता है।

४४ जबरजद।—इसका रङ्ग सबुज, मुसलमान लोग इसका बड़त तारिफ करते है। यह पत्थर लसुनेकी खानमे पयदा होता है, लेकिन इसमे सूत नहि पड़ते है और यह बड़त निर्म्मल होता है।

४५ पायजहर।—इसका रङ्ग सफेद पांशका माफिक होता है, बदनपर विष लागके घाव होनेसे उसके उपर पायजहर घिसके लागानेसे वह शुक जाता है।

४६ जहरमूरा।—इसका रङ्ग थोड़ा सफेदपन लिये ऊये सबुज होता है, इसका यही एक गुण है, कोइ चिजके साथ विष मिशायके जहरमूराके कटोरा-पर धर देनेसे वह विषका दोष काट जाता है।

४७ फिरोजा।—इसके रङ्ग आशमानी, यह पत्थर नहि, कांकरमे पयदा होता है, इससे आङ्गुटी आदि बनावते है।

४८ सङ्ग कुदरत्।—इसका रङ्ग काला, इसके उपर सफेद और जरद दाग रहते है।

४९ गवा।—इसके रङ्ग सफेद, सङ्ग गोरीमे जो कोइ गुण दोष है, इसमेभी सो सब गुण दोष होता है।

५० कसोटी।—इसका रङ्ग काला, इसमे सोणेको कसके परीक्षा करते है।

44. *Zuburzud*—Color, green. Mahomedan gentlemen have a great liking for this stone. It is found in the same mines as the Cat's-eye, but it has not any streaks over it. It is very transparent.

45. *Páy-Zuhur*—Its color is ashy white. It heals ulcers caused by the action of poison, when it is rubbed over them.

46. *Zuhur-Márá*—Its color is green with a tinge of white. A cup formed out of this stone neutralizes the effects of poison that may be mixed with the thing placed in it.

47. *Ferozá (Turquoise)*—Its color is sky-blue. It is not a stone but a kind of *Kunkur*. It is used for finger-rings and other such things.

48. *Sung Kudrut*—Color, black, with white and yellow veins.

49. *Gubá*—Color, white. The description given for *Sung-gorí* applies to this stone. The *Gubá*, however, is softer than that stone.

50. *Kasotí*—Color, black. This stone is used for testing gold.

५१ शब्जिया।—इसका रङ्ग शङ्खका माफिक सफेद होता है, इंग्राज लोग इसको बहुत पसन्द करते हैं, इससे घड़िका लकेट बनावते हैं।

५२ इरेनजफ।—इसका रङ्ग कांचा धानका माफिक, इसमे बहुत् पलिस होता है, इससे आङ्गटी बनावते है, यह पत्थर देखनेमे जबरजदके माफिक, लेकिन इसका रङ्ग जबरजदसे गाढ़ाभी होता है, हाल्काभी और साफभी होता है।

५३ गिरखडी या सङ्ग जराहत्।—इसका रङ्ग माट्टिके माफिक, इससे खेलाना बनावते है, जखम लागनेसे यह पत्थर घिसके भर देनेसे जखम पूरा हो जाता है।

५४ दारचना।—इसका रङ्ग दारचिनिका माफिक, मुसलमान लोग इससे तसबी बनावते है।

५५ सङ्गसितारा।—इसका रङ्ग बहुत् प्रकारका होता है और उसका उपर सोणेका माफिक छिटा देखा जाता है, सीसासेभी इसको नकल होता है।

५६ लाजवरद्।—इसका रङ्ग नीला होता है, इसका उपर जगह जगहमे सोणेका छिटा रहते है।

५७ सङ्गमकड़ी।—इसके रङ्ग सादापन लिये हुये काला होता है, इसके उपर मकड़ीके जालके माफिक देखा जाता है।

५८ लुधिया।—इसका रङ्ग मेजेण्टारके माफिक लाल होता है, इससे आङ्गटी बनावते है।

51. *Sunkhid*—Its color is white like that of the conch-shell. It is used by Europeans for lockets and held in much favor by them.

52. *Dúr-e-najuf*—Its color is like that of the green paddy husk. It is used for finger-rings and admits of very good polish. It looks like the *Zuburzud*. But its color is either deeper or lighter and much clearer than that stone.

53. *S'ir-kharí* or *Sung Jurdhut*—Its color is like that of clay. Dolls, toys, &c., are made out of this stone. This stone quickly heals up all bruises if it is rubbed into a paste and applied over them.

54. *Dárchaná*—Its color is like that of the Cinnamon. It is used by Mahomedans for beads for rosaries.

55. *Sung-Sitárd*—It is of two kinds. It has different colors in the specimens, and has dots of gold intermixed with them. It is capable of being imitated by lead.

56. *Lájburud*—Color, blue. Dots of gold are observed in portions of the surface.

57. *Sung-mukrí*—Color, black, with a tinge of white. Its surface looks like a spider's web.

58. *Ludhiá*—Color, red, like that of the magenta. Finger-rings are made out of this stone.

५८ सङ्गवांशी ।—इसका रङ्ग हालका सबुज, यह पत्थर सङ्गसमसे नरम होता है, लेकिन इसमे पलिस आच्छा होता है।

६० हावाष ।—इसका रङ्ग सोणेपन लिये ऊये सवुज होता है, इसमे आच्छा पलिस नहि होता है, यह पत्थर दावामे लागते है।

६१ सफरी ।—इसका रङ्ग सवुजपन लिये ऊये आशमानी होता है, जैसे कोयाका डिम।

६२ आवरी ।—इसका रङ्ग कालापन लिये ऊये सोणेका माफिक होता है। गरिव आदमी इससे आङ्गठी बनावते है।

६३ चिती ।—इसका रङ्ग काला, और उसके उपर सोणेका छिटा और सफेद डोरा मालुम होता है।

६४ पायरी ।—इसका रङ्ग माट्टिके माफिक होता है।

६५ सङ्गलास ।—मार्ब्बलके जात।

६६ सङ्गसीवार ।—इसके रङ्ग सबुज, इसके उपर भूरे रङ्गका रेखा देखा जाता है।

६७ जजेमानी ।—सोलैमानीका जात, इसका रङ्ग पाशका माफिक होता है, इसके उपर वही रङ्गका डोरा देखा जाता है।

६८ दांतला ।—इसके रङ्ग जरदीपन लिये ऊये सफेद होता है, शांख बऊत् दिनका पुराणा होनेसे जिस-माफिक थोड़ा जरदीपन है, इसके रङ्ग ठिक

59. *Sung Bánśi*—Color, light green. The stone is softer than *Sung-e-shum*, and admits of good polish.

60. *Hábás*—Its color is green with a tinge of gold. It does not admit of good polish. This stone is used for medicines.

61. *Safari*—Color, sky-blue, with a slight tinge of green, like that of the crow's egg.

62. *A'bri*—Color, golden, with a shade of black. People of moderate means make finger-rings out of this stone.

63. *Chiti*—Its color is black and it has golden dots and streaks of white over the surface.

64. *Páthuri*—Its color is like that of clay.

65. *Sung-lás*—A kind of marble.

66. *Sung-Síbár*—Color, green, with ash-colored streaks on the surface.

67. *Jajemáni*—A variety of *Solemáni.* Color, ash-like, with streaks of an ashy color on the surface.

68. *Dántlá*—Color, white, with a mixture of yellow, like that of an old conch-shell. The stone is found in the mines of the Diamond and is very transparent.

यही प्रकारका होता है, यह अति स्वच्छ, हीराके खानमे यह पत्थर पयदा होता है।

६९ पनघन।—इसके रङ्ग थोडे सवुजपन लिये ऊये काला होता है, इससे खेलाना वनावते है।

७० रत्तक या रतवा।—इसके रङ्ग लाल, यो आदमीका रातमे वोखार आता है, वह आदमी गलेमे यह पत्थर वांधनेसे वोखार छोड़ जाता है, और शिर घुराणीके विमारीभी भाला होता है।

७१ उपल।—इसके रङ्ग नानाप्रकार होता ह, लेकिन इसके उपर नानाप्रकार रङ्गका अवरक पड़ते है।

७२ गुंद्ड़ी।—फकिरलोग जिस प्रकारका नाना रङ्गका कांथा व्यवहार करते है, इसके रङ्ग तिस प्रकारका नाना रङ्गका चुद्र चुद्र अंशयुक्त होता है *।

७३ मरियम।—इसके रङ्ग सफेद, इसमे आच्छा पलिस होता है।

७४ अहवा।—इसके रङ्ग गोलावी, इसके उपर वड़े वड़े छिटा पड़ते है।

७५ डुंरी।—इसके रङ्ग कथके माफिक होता है, इसके खल वनावते है।

७६ अमलिया।—इसके रङ्ग थोड़े कालापन लिये ऊये गोलावी होता है, इससे खल वनावते है।

७७ हालन।—इसके र मयला गोलावी, इसके यही एक गुण है, कि यह पत्थर रवरके माफिक नोते है †।

* यही जातका एक पाथर राजा राजेन्द्रनाथ मल्लिकके मोकाममे है।
† यह जातका पाथरभी राजा राजेन्द्रनाथ मल्लिकके मोकाम पर है।
69. *Pun-ghun*—Color, black, with a tinge of green. Toys, figures, &c., are made out of this stone.

70. *Rattal or Ratavá*—Color, red. If worn on the neck, this stone is said to cure giddiness of the head and such fever as comes on only at night.

71. *Upul*—It is found to be of various colors, having a shade of blue over the surface.

72. *Gundri**—It is parti-colored, like the cloak of the *Fakirs* (singing mendicants).

73. *Muriyam*—Color, white. It admits of very good polish.

74. *Ajuvá*—Its color is rose red, with large dots over the surface.

75. *Dumri*—Its color is like that of the catechu. Mortars, pestles, &c., are made out of this stone.

76. *Umliyá*—Color, rose red, with a tinge of black. Mortars, pestles, &c., are made out of this stone.

77. *Hálun*†—Its color is pale rose-red. This stone is elastic like the India Rubber.

* A specimen of this stone is in the possession of Rajah Rajendra Mullick

† Ditto ditto ditto ditto.

७८ सङ्गजद।—इसके रङ्ग थोड़े सेहादपन लिये ऊये सबुज होता है।

७९ खारा।—इसके रङ्ग सवुजपन लिये ऊये काला होता है, इसके खलमे मोति आदि पिशते हैं।

८० कांसला।—इसके रङ्ग सवुजपन लिये ऊये सफेद होता है, इसमे पाणि वऊत आच्छा होता है, यह पत्थर हीराके खानमे पयदा होते हैं।

८१ मकनातिस।—इसके रङ्ग थोड़े सेहादपन लिये ऊये सफेद होता है।

८२ हकिक कुलवाहार।—इसके रङ्ग सवुजके साथ जरद मिशा है, यह पत्थर जलमे पयदा होता है, इससे मुसलमान लोग जपका माला वनावते हैं।

८३ सङ्गसुरमा।—इसके रङ्ग काला, इसके भितर चांदीका माफिक चिकन रहते हैं, इससे आखके काजर करते हैं।

८४ सङ्गसिया।—इसके रङ्ग काला, इससे नानाप्रकारका मूरत वनावते हैं*।

* इसके सेवाय लालुका, सव्जा, चोका, जरदा ऊर धूसरी आदि वऊत प्रकारके पत्थर बिन्द्रा पर्व्वतमे पाये जाते है। गौड़ मालदा की एक लाल का पत्थर की चौकी (जिसपर उनका सिंहासन राखा जाते है) वह चोकी विस् यस् कलकात्तानिवासी आनरेवल महाराज श्रीयुक्त यतीन्द्रमोहन ठाकुर वाहादुर सि, यस्, आइ, महाशयके यमारल्ड वा ओयार नामे बागमे मौजुद है।

78. *Sung-jur*—Color, green, with a mixture of black.
79. *Khárá*—Color, black, with a tinge of green. Mortars made out of this stone are used for grinding Pearls, &c., in.

80. *Kánslá*—Color, white, with a dash of green in it. It has very good "water," and is found in the Diamond mines.

81. *Muk-ndtis*—Color, white, with a tinge of black.

82. *Hakik Kulbáhár*—Its color is a mixture of green and yellow. This stone is born in the waters, and is used for beads for rosaries.

83. *Sung-Surmá*—Color, black. The stone glitters like silver. Its powder is applied to the eyes by the *Hindusthanis*.

84.* *Sung-siyá*—Color, black. Figures and statues, &c., are made out of this stone.

---

* Besides these there are several stones of an inferior variety, such as *Lulká*, or *Bási*, *Subjá*, *Dhonká*, *Jurdá*, *Dhusri*, &c., found in the Vindya mountains and other places. A platform made of *Lulká* over which the throne of the king of Gour is said to have been placed can now be seen in the "Emerald Bower," the country-seat of the Hon'ble Maharaja Joteendro Mohun Tagore Bahadoor, c's i. It was brought over from the ruins of the capital of Gour, in Maldah.

The term mán (one) may signıfy either one, *one* hundred, *one* thousand, or *one* hundred thousand, and so on, according to the proper worth of the jewels, the valuation of which has to be determined So, with regard to other terms These terms are used by Hindusthani jewellers among themselves, in the presence of lay customers, in order that they may be kept in the dark as to the real price of gems

NEPAUL.*

THOUGH the language of Nepaul differs widely from that of Hindusthan, the names of jewels and the manner of examining them as known in this country are just the same as in India. The fact of Hindusthani jewellers taking over jewels to this country and selling them at high profit precludes the possibility of any one but the very rich buying them. Mines of Turquoise only are observed in this country. But the specimens found here are not of a good color and are consequently of less value than those seen in the mines in Persia and Afghanisthan. *Turmuli* is sometimes seen in the borders of Thibet, where Pearls and Corals are taken from Nepaul for commercial purposes. *Sinduriá*—a light-colored variety of the Ruby—is also sometimes found in that place. This stone is sold in India at 2 or 3 annas a *rutty*. *Sung Músá*, *Sung Dheri*, and other such stones are found in the hilly regions of Nepaul. The people of Nepaul are excessively fond of Pearls.

BURMAH AND SIAM.†

ACCORDING to the Burmese jewellers, there are no written works on gems in the Burmese language: or, at least if there are any, they are in the

* Materials supplied by Major Bissonath Upádhyáya, representative of the Court of Nepaul, at Calcutta.

† From Mokho Mia Sahib of Mandalay.

Royal Palace and are not accessible to the general public. Burmese jewellers always examine precious stones and gems by sight. They are well conversant with the method of testing the Ruby, Sapphire, and Topaz, and such other stones as are born in their country. They have learnt something about Diamonds from India; and of the rest of precious stones, their knowledge is limited, perhaps, beyond the names which they have converted into their own language.

Hirá.

The Diamond is divided into four kinds; *viz.*, *Áfiu* (white); *Ábá* (yellow); *Anneyh* (black); and *Ání* (red). The black spots in the Diamond are known among the Burmese by the term *Meh;* fissures, by the word *Pajım;* and absence of water, by *Ámauh.* Unlike other nations, the people of Burmah keep the raised portion *(Ákai chhun)* of the Diamond on the top; and the flat surface (*Táblá*) on the bottom. The best specimens are those that are known as *Lede, i.e.*, heavy stones, of the first water *(Áiye káundeh).* The *Tulání ghát* is called the *Áyá*, and the *Gerddá ghát, Kobáyi.* The square cut is termed *Ákobá Ledáyun*—the best cut recognised. The Diamond is designated in Burmah by the word *Chein,* which is the Burmese for arsenic, perhaps, on the ground of both possessing the property of destroying animal life. There are no Diamond mines in Burmah.

Manik

The very red specimens of the Ruby are called *Menyu gum khanu yanghe* The rose red ones (called *Panyáng)* are not considered so good *A'nomoy*, *Anyı*, and *Anideh* are the different names which the Ruby assumes according to the degree of excellence which its color possesses

The following are the names by which the defective varieties of the Ruby are known —

Ayode (those that have their red color mixed with black) *Koh* (those that have milky imperfections), *Aiye Zoye* (those that have their color deep in one part, and light in another), *Aije le* (those that have no water), and *Aibo*, (those that have defective water)

The Ruby mines lie at a distance of ten days' journey from Mandalay under the mountains in the northern portion of the country The number of mines lying there is three, these are called Mono Ka de, and Cháplin The Mono mines produce the best specimens, and foreigners are interdicted access to them These mines are leased out to some of the rich people of the country Specimens exceeding 1,000 Rupees in value are not allowed to be taken out of the country without the knowledge of the king, those that are sent out are done so with some stratagem or other Rubies in their rough state are called *Kenu Sa* or *Ai Ai*, when cut, they are called *Tdbld*, and when polished but not cut, they are termed

Tanjin. The weight of a Ruby now in the possession of the King is one *Tical* (one tolah, six annas, and three pies).

Nílá.

THE names of the best specimen of Sapphire are *Nílá, Nikhádáun* (of the color of the wings of the bird known in Burmah as *Nikhá*), and *Seiyaun* (of a faint tinge of green). The Burmese agree with Hindusthani jewellers as to what constitute the defects of the Sapphire.

The Topaz and the Sapphire come from the same stock, and differ only in color.

Names of the nine precious Gems.

ENGLISH.	BURMESE.
Diamond	Chein.
Ruby	Budmiyá or Choní.
Cat's-eye	Cháno.
Zircon	Gomok.
Pearl	Pa-le.
Coral	Tadá.
Emerald	Miyá.
Topaz	Outfiyá.
Sapphire	Nílá.

Burmese jewellers assert that the same system of testing gems obtains in Siam as that which is adopted in Burmah. There appear to be no strong grounds for not accepting this statement. Siam was at one time subject to Burmah, has its language somewhat similar to that of the latter country, and produces the same kinds of stones as are found

in Burmah It stands to reason, therefore, that the Siamese system of examining gems is not unlike that of Burmah

Sapphire mines have recently been discovered in the provinces of Battambong and Chantaboon in Siam

---

CHINA AND JAPAN

WE regret that we could not obtain from the people of China living at Calcutta such information regarding their jewelry as one might desire to possess The few merchants who live at *Pollock Street failed to give us any information* Our inquiries however met with some success at 8, Pollock Street, which represents the firm of Messrs Hangpo and Co The gentlemen connected with this House were inhabitants of Canton, and were good enough to impart us such information as they had at their disposal

The following lines embody the result of our inquiries at the above mentioned office, supplemented by such other light as could be gleaned from histories and works of travel

The Topaz, Ruby and Sapphire are mostly found in China The Topaz is used by all the noblemen of the country The Chinese Sapphire does not possess as good "water as the Siamese stone, but its color is *pretty good* The Diamond *is observed*

in certain portions of the Empire, but not in large quantities The Cat's eye is also sometimes seen It is somewhat blackish in color, and its "line" is not particularly good The Chinese trade in jewelry which they bring from India and America The seas about China and Japan abound in Corals, and the neighbouring people deal extensively in them It is customary with the rich in China to wear costly apparel on birth day anniversaries Such as are dressed in red wear the yellow stone, *i e*, Topaz, such as are clad in yellow use the red jewels, *i e*, Ruby or Coral

Five principal gems are recognised in the Chinese religion, *viz*, Ruby, Diamond, Pearl, Emerald, and Coral The Sapphire and the Topaz are classed with the Ruby—the difference being in color only Like the Hindus, the Chinese believe in the fact of these five gems being respectively presided over by different deities

The rich men in China make use of jewels with a view to prolong their life In order to bring about good or to prevent mischief being done, some people wrap up the five principal gems in small bits of paper in which are respectively written the names of their presiding planets, together with those of the moon and of the twenty seven stars, and suspend them before the entrance to their houses Others burn the contents of the papers and use their ashes with wines According to the laws of the country, no one could wear jewels more precious than those

used by the royal family It is related that during the reign of Kinking Kienlung, his favorite minister, had the audacity to enter the palace wearing a big rare Pearl on his person His body was hacked into ten thousand pieces the whole of his estate confiscated to Government, and his family all banished out of the Empire

The Pearl is the most favorite gem of the Chinese The hand fan is one of the indispensable personal ornaments used by noblemen on festive occasions, and these fans are invariably found to be studded with small Pearls Small Pearls are also used in the fringes of umbrellas and in the body of the umbrellas themselves They enter largely into the workmanship of the red silk cloths whereon the rich men sit as also into that of any apparel which they use for covering their body Like some other nations the Chinese use Pearls for medicinal purposes, chiefly with the object of obtaining physical strength Pearls of all shapes, such as the Pacific produces, are often set in gold, converted into the figures of cats, dogs, men, &c, and placed in the Buddhist temples and other sacred places The skins of Pearls of a less value are sometimes put by the rich over windows lids of boxes, handles of fans, and frames of pictures

China abounds in various descriptions of marbles, Porphyry, Jasper, Quartz and other inferior stones

Japan yields a considerable amount of revenue to the Government by its mineral products No

Diamonds have been found in this place, but Agates, Carnelians, and Jaspers are met with,—some of them of great value Nearly all parts of the coast of Japan supply Pearls, frequently of great size and beauty.

Pearl fisheries in Manchooria and elsewhere and such like sources furnish an important addition to the Imperial revenue of China

Names of the nine precious Gems as known in Canton

English	Chinese
Diamond	Chunsyák
Ruby	Seflayusyak.
Cat's eye	Máuji gán
Zircon	Pisí
Pearl	Chuntí
Coral	Sáu ho chí
Emerald	Luksyák
Topaz	Silangsyák
Sapphire	Chángsyák

AFGHANISTHAN*

GEMS and jewels are in less use among the people of Afghanisthan, Turkistan, and other countries in Central Asia, than among other nations in the continent of Asia As a consequence, no works exist on the subject of jewelry in Pushtoo,

* From Moulvie Abdool Huq the son of Mollah Habibullá, a learned man in the court of Kondul Khan, Governor of Candahar

the language of the Afghan nations Jewels are called in this language by the term "jaháer" The examination of gems is conducted by sight only by *Hakims* and *Moulvies of note*, and no nobleman in this country would purchase any jewels without consulting with them It is the opinion of these connoisseurs that none but the virtuous has any right to the use of jewels

Lájbumud, *Ál il*, *Pu ojá* (*Fei o'só*), and *Sung Mukshud* are generally found in the country of the Afghans The last mentioned stone is to be seen in the city of Candahar Ruby is found at Badakshan, but it is far inferior to that of Burmah Pearl is called "Murgulur" in Afghanisthan Diamond, Emerald, Topaz, Ruby, Zircon and Sapphire are never born in this country These stones are known to the people by their Persian designations, the Pushtoo language having no words to represent them The Cat's eye is called by the Afghans by the term *Pishi Tursi*, but it is not a production of any mines in this country

Pu oja (Turquoise)—This stone is found in abundant quantities According to the learned *Moulvies*, cataract in the eyes is cured some time after a Turquoise, set in a silver ring and dipped into water, is applied over the parts affected,—the application being accompanied by the chanting of the name of the Almighty

Sung Mukshud—A very favorite stone with the Afghans, and used by them for beads

for counting their prayers. A rosary consisting of the best specimens of this stone fetches from Rs. 200 to Rs. 250 in value. The *Hakims* use this stone rubbed into a paste, as a remedy for cholera.

Káhárbá—The color of this stone is yellow like that of the *Chámpá* flower. This stone is used by the Afghans as a capital tonic. The *Káhárbá* is found in Arabia and Egypt, and is known to sell for from Rs. 8-8 to Rs. 10 per *tolah*. It is used also for beads for rosaries.

Murján—The Coral. It is given by the *Hakims* as a tonic, with powdered gold.

Lájburd—Color, black, with dots of gold on the surface. The *Sirdars* and other noblemen grind this stone into powder and mix it with the paint with which they have the walls of their rooms painted. Worn on the neck by young children, the *Lájburd* protects them from witchery. It is also used for medicinal purposes.

Solemáni—Beads for rosaries and finger-rings are made out of this stone. The *Solemáni* has the power of keeping off all earthly woes if it is

kept in the house It insures the owner victory over his enemies *Mollahs* of known miraculous powers can give life to this stone by incantations, and can, by means of such a stone, disenchant a person who might have fallen victim to "witchery" It is said that this stone can be continually kept alive if it be put within a small box in which vermillion is usually kept

Sukrdsarif—The name of a stone found in *Baitul mukdadas* (Jerusalem) Color, white, weight, about 25 or 30 *maunds* This stone is said to be situated above the earth and suspended in ether The Afghans make reverential bows to the situation of this stone

Huzur Áosud—The sacred stone of the Mahomedans at Mecca It is said that the original color of this stone was white, and that the polluted touch of the sinners coming frequently on pilgrimage has rendered it black. The Hindus call this stone *Macceśvara Śiva*—as it looks somewhat like the phallus of *Mahádeva*

EGYPT.*

WHEN the Mahomedans unfurled their banners, and directed their religious expedition from Mecca to the West, they introduced the *Korán* into Egypt, Turkey, Morocco and such other countries on either coast of the Mediterranean as could be successfully brought under subjection. The study of the *Korán* necessarily involved the study of Arabic, in which language the sacred book of the Mahomedans is composed, and ultimately led to the systematic cultivation of that language. Gradually, Arabic began to take deep root in the country and to be blended with local dialects. It is not a matter of wonder, therefore, that the language used in naming the varieties, defects &c., of gems and jewels by the people of Egypt, Tunis, Morocco, Abyssinia, and other such places, is partly Arabic and partly local. Almost all the countries belonging to the Mahomedans or originally conquered by them, have their language based either on Arabic or Persian. Most of the countries East to Persia have had Persian for their dialect. As in India, Urdu is the result of the mixture of Persian with Hindi, so there is in each country, to the West of Persia, a hybrid language

* Materials received from Sayyid A'bbás, an Egyptian merchant, at present of Calcutta.

which is a combination of Arabic with the language of the locality. As Hindusthani jewellers use Persian expressions in their description of jewelry, so the Egyptians use certain Arabic terms in connection with the designation and examination of precious gems. There are some works on jewelry in Egypt, written in the modern dialect of that country. But the Egyptian *Moulvies* of the present day cannot enlighten us on the views held on the subject by the ancient authorities.

(1) *Álmáz*—Diamond. This is the strongest, lightest in weight, and most brilliant, of all precious stones. It is iridescent like the crystal prism. It is divided into four classes of color; *viz*, white, yellow, black and red. The best specimens of all are those that are white like the quick-silver and very light in weight. The next in quality and value are the yellow ones. The black specimens are the hardest of all, and are of less value than the yellow ones. The rose-red varieties are pretty good.

The presence of a kind of insect of the appearance of black dots inside a Diamond constitutes one of the defects of this stone.

The use of the Diamond with gold imparts to the wearer health and vigour.

The *Bedúrí* is palmed off on ignorant customers as the Diamond. It·looks exactly like the Diamond, but is of very little monetary value.

(2) *Lálá*—Ruby. Color, red. The *Lálá* is a warm and dry stone. Its color is divided into four classes, each class being designated a *Darwázá*. The very lightest color is called the first *Darwázá*; a little deeper color is termed the second *Darwázá*; still deeper, the third *Darwázá*; and the deepest of all, the fourth *Darwázá*. The hardness of the stone is proportionate to the depth of its color.

The following are the defects of the Ruby:—Very dazzling color; *dudhá* (fissures); *usutfá* (shady imperfections); and *núkas* (very light color).

The nobility prepare *Surmá* from this stone. The Ruby taken with *májoom* (electuaries) adds strength to the body.

The *Gomeda* sometimes passes muster for the Ruby.

(3) *Yácut Ájruf*—A variety of the Ruby. The qualities and imperfections are to be judged by the same rules as are applicable to the Ruby.

(4) *Yacut Asfur*—This stone is divided into three classes, *viz*, *Asfur* (yellow), *Abiyud* (white), and *Khdmuri* (rose-red) The qualities and imperfections of this stone are the same as those of the Ruby

(5) *Lálaha*—An inferior variety of the Ruby The same rules as to qualities and imperfections as are applicable to the Ruby hold good as regards this stone

(6) *Zummurrud*—The Emerald Its color is *Sádekul kuddr*, *i e*, very green Like the Ruby, it is divided into four *Darwázds* The fact that a serpent immediately falls to licking a *real* Emerald as soon as it happens to come across it, is the best test for a true specimen

The external use of an Emerald secures to the wearer unbounded influence over mankind

The *Zuburzud* is sometimes mistaken for the Emerald Its color is green mixed with yellow *Bájhur*, a stone of a green color mixed with black, is again sometimes mistaken for the *Zuburzud* The internal use of this stone (rubbed into a paste), neutralises

the effects of poison. *Dúr-e-nu-juf*, a white stone, is sometimes passed off as the *Bájhur*. It has, however, no place in jewelry.

(7) *Luluh*—The Pearl. It is *Múkhup-orko, i.e.*, consisting of three scales; *Tukil-bujanu, i.e.*, heavy in weight; and *Bamokolas, i e.*, round. The best specimens are those that are *Supakífi* (clear) and *Ábiyut* (white). Those that are *Ásfur Ál-hámár*, or yellow with a tinge of red, belong to the second *Darwázá*. To the third *Darwázá* belong those that are *Ásbád*, or white with a tinge of black. Pearls are found at Baharin, a place near Bussorah.

The Pearl has two cuts; *viz*, the *Bamokolas* or circular-shaped, and the *Áldtul* (*Latkán*) or the drop-shaped. Irregular cuts are called *Ábuj* and are not liked.

The absence of any of the qualities enumerated above constitutes a defect of the Pearl.

The Pearl-powder taken with electuaries strengthens the body and adds lusture to the eyes

(8) *Murján*—The Coral. It is found in the seas, in the shape of a tree. The best specimens are those that are very red, very hard, and very heavy in

weight. The degree of the inferiority of the Coral is proportionate with the lightness of its color. The Coral is called *Yuseri* or *Hakik-Kulbâhâr*, when its color is black.

Cut open the top of a lemon, and put a piece of Coral inside, and then cover up the opening with a paste of clay. Put this lemon under fire for some time till it gets white with burning. Take it out, and after grinding the stone well, use it as a *Surmá* for the eyes. Mixed with electuaries, and taken, the Coral gives great physical strength.

(9) *Ákik Yámâni*—The red specimens belong to the first class; the yellow ones to the second. The green ones are known as the *Antas*; the black ones, as the *Solemâni*; and the ash-colored ones, as the *Guri*—the worst variety. *Guri* is, in Arabic, termed the *Sáb*.

An extraordinary specimen of a sky-blue Cat's-eye has been presented to the author of this work by Sayyid Ábbás, formerly an Egyptian merchant but now a *Fakir*. This stone had been presented to the Sayyid by an Arab Prince, as a reward for his proficiency in playing upon the musical instrument *Sarod*

There are a thousand different kinds of stones, but these are not taken into account in jewelry.

Names of the Nine Precious Gems

	English	Egyptian	Bagdadian
1	Diamond	Álmásh	Álmásh
2	Ruby.	Lálá	Yácut
3	Cat's eye	Áynullur	Áynullur
4	Zircon	Láladu	Láládu.
5	Pearl	Luluh	Komás
6	Coral	Murján	Murján
7	Emerald	Huzrul Háiyá or Zummurud	Zumurrud
8	Topaz	Yácut Ásfur	Yácut Asfur
9	Sapphire	Yácut Ájruk.	Yácut Ájruk

NORTH AND SOUTH AMERICA.

THE rules as to the testing and valuing of precious stones in the New World are not the same in all the countries that it embodies. Those places that have been originally colonised or is still possessed by the British are guided by the British standard of testing jewelry those that belong to the French, Dutch, Danish, or Spanish, are amenable to the laws of the respective states to which they belong, and so on. The republics have the same laws as to the use and identification of precious stones as obtain in the countries whose inhabitants form the bulk of their population.

The aboriginal natives, whose number is gradually getting less, delight in Pearls and Corals, with which they have been known to decorate themselves.

ANTARTICA AND POLYNESIA.

ANTARTICA, which represents the group of islands lying within or near the *Antartic* Circle, and Polynesia, which consists of a vast multitude of small islands scattered over the Pacific, have not been much known to us as containing mines of any precious stones. These are inhabited by wild people, most of whom tattoo their bodies and decorate themselves with sculls and pieces of bones strung together

---

AUSTRALASIA.

THE British possessions in Australasia are Australia, Tasmania, New Zealand, Norfolk Island, Auckland Isles, and Chatham Isles. The inhabitants of these colonies are, for the most part, British, and are, consequently, subject to the same rules for the identification and valuation of jewels as obtain in the mother-country.

---

of *Pali* (their national language), together with the provincial dialects of the people. In Ceylon, works on jewelry in the *Páli* language can, if searched for, be met with. We have, fortunately, been able to secure a copy of a Cingalese work on stones—called *Ratna Pariksha*—composed in the *Páli* language. What we propose to give here is not, however, the reproduction of views enunciated in this work. The views orally received from Cingalese jewellers of the day form the subject of our present notice.

Nine precious stones are recognised in Sanskrit authorities, whereas eight stones are reckoned as the principal ones by the *Chulids* of Ceylon—*Gomeda* being rarely used in the country, and not considered as belonging to the class of *the* precious stones. The term Ratnam is used as a general designation for jewels. Most of the names of the stones are based on Sanskrit and used as such both by the Hindu and Mahomedan jewellers of the country. Thus Híraka is called Bajram, Mánika, Manikyam. Nilam, Nilam, Vaiduryya, Vaiduryyam, Pushparága, Pushparagam, Maralata. Puchche, Muktá, Muttu, Prabála, Pagalam. It will be observed that the first four words are exactly Sanskrit, the fifth is a local dialect, and the last three are *Pali*, a corruption of the Sanskrit.

Bajram—The Diamond. This stone has been known to possess the same four varieties of color as are recognised by

Sanskrit authorities; *viz*, white, black, red, and yellow. The white specimens are called "Vairúppú Vairam;" the black ones, "Karppú Vairam;" the red varieties, "Sakarppú Vairam;" and the yellow ones, "Madhú Varnam." The *Chuliás* acknowledge the same defects of the Diamond as jewellers of other countries. Such Diamonds as have black spots about them go by the name of "Karttupúlí;" those that have black streaks are called "Idkal." Of all defects of the Diamond, the above two are the most important. No Hindu Cingalese would ever consent to keep in his house a Diamond having black streaks over it. The people of Ceylon have an idea that the Goddess of Fortune never resides in the home of one who keeps in it a Diamond having any of the two defects specified as above.

Mánikyam—The Ruby. By the term *Mánikyam*, the *Chuliás* mean such stones as have the color of the pure, transparent blood issuing afresh from the body of a healthy animal.

The ordinary varieties of the Ruby are called "Sappú" by Mahomedan jewellers and "Gambu" by the Hindus. "Carlinum" (Carnelian?) is the name applied to such specimens as have a tinge of black in them; and "Mancha," to such as have a dash of yellow in them. According to the *Chulás,* the spotless specimens only are entitled to be kept in the Royal Treasury. Others are productive of no good to the possessors thereof. The "milky imperfections" in the Ruby are called "kobánk" by some, and "Nasle" by others.

Nílam and Pushparága—The Sapphire and the Topaz. The defects in these stones are judged by the same standard as apply to the testing of the Ruby.

Puchche—The Emerald. The *Chulids* divide the Emerald into two classes;* *viz*, the old and the new. The former specimens go by the name of

* Hindusthani jewellers also divide the Emerald into two classes Those born in the old mines are noted for their transparency, the depth of their color and the purity of their water Those that are found in the new mines are rather less deep in color, less transparent, contain less pure water, and have, instead of the color of the green corn, somewhat of a blackish tinge in some of the specimens.

"Param Puchche;" the latter, by that of "Pudu Pachche."

Vaidúryyam—The Cingalese are great admirers of such specimens of the Cat's-eye as have the surface of a golden color. Such specimens are called Punyakan Vaidúryyam. Those stones that have a black surface are styled "Karnúl Vaidúryyam." The *Chuliás* call the "line" in the Cat's-eye by the same term (*Sut*) as is used by Hindusthani jewellers. Unlike the Hindusthani jewellers, the Hindu *Chuliás* attach some value to the black varieties, and none whatever to the smoke-colored and parti-colored specimens. The defective specimens are called "Tarburi" and those that contain no "lines" are known as "Áknenul."

Muttu—The Pearl. The *Chuliás* are at one with other authorities in the testing and in pronouncing upon the merits and defects of the Pearl. The good, round, transparent Pearls are called Ánimuttu; the blackish specimens, Mas'u; the yellowish ones, Chillír; the very small varieties, Tur; the deformed

specimens, Ánsár; and the ones used for medicinal purposes, Más'í. The Sujni cut is known by the name of Krayal; the best cut, by that of Ánikrayal, and the worst cut, by that of Khráp Krayal.

The seas about Ceylon abound in Pearl-fisheries. These Pearls are brought over to India and sold by the *Chúliás*, who take away Emerald, Vaidúryya and such other stones as are not found in abundance or found at all, in Ceylon, where they sell them to great advantage.

Pagalam—The Coral. It is divided into two classes: The light-colored specimens are called "Bel-le," and the colored ones, "Kappu." The black varieties are called "Kul-li Kappu;" the drop shaped ones, "Tari Kumbu," or "Nim-le;" and the defective ones, "Nim chasi." The Pearl and the Coral are sold in Ceylon by *Tolas* and *Dákini*. The wild Cingalese never use a Coral that is not defective. They labor under an impression that genuine Corals cannot but be defective.

Zuburzud—Called in Ceylon "Puchche Maraka-tam," and there reckoned as a variety of the Emerald.
Good specimens of the Ruby are rarely met with in Ceylon. Diamond has sometimes been found in some of the old mines. The Sapphire and the Topaz are to be had in abundance. Generally speaking, colored stones are termed "Írnir" if they have their color deep in some portions and light in others; "Sughar," if they have their color very light; "Káttábák," if their "water" is impure; and "Nírbák," if they possess a very good "water."

THE

CHEMICAL ANALYSIS OF PRECIOUS STONES.

Beryl : Emerald.

Combination of glucina, silica, and alumina.

		Emerald.	*Beryl.*
Glucina	...	12·50	15 50
Silica	...	68·50	66·45
Alumina	...	15·75	16 75
Oxide of Chrome	...	0·30	0 00
Oxide of Iron	...	1·00	0 00
Lime	...	0·25	0 00

Sp. Gr. 2·76 to 2·73. H. 7 5—8.

Native form: a hexahedral prism terminated in a six-sided pyramid, imbedded in a vein of magnesian limestone traversing hornblende rocks. Colour: Emerald, grass-green; *Beryl*, light green, tinged more or less with blue.

Calcedony

Consists of silica and alumina.

Silica	...	...	84 0
Alumina	..	...	16 8

Sp. Gr. 2 6. H. = 7.

Agate, Heliotrope, Onyx, Plasma, Sard, are all varieties of Calcedony differently coloured by metallic oxides.

Native form: botryoidal (grape-like) masses; but more frequently found in rolled pebbles.

Diamond.

Pure carbon. Sp. Gr. 3·55 (inferior to the Sapphire).

Hardness=10, the highest in the scale. Highly electric by friction.

Native form: an octahedral crystal, usually modified by the obliteration of the angles and edges; found mixed with gold-dust in a hard ferruginous concreted gravel. Colour: pure white, often tinged with yellow, red, blue, &c.

Garnet.

Combination of a silicate of the protoxide of iron with silicate of alumina.

Silica	...	...	33·75
Alumina	...	...	27·25
Oxide of Iron ...		...	36 00
Oxide of Manganese		...	0·25

Sp. Gr. 4·2. H. 6·5 to 7·5.

The native garnet (Almandine) is not electric by friction, but when polished and facetted I have found by experiment that it becomes highly so.

Native form: a rhombic dodecahedron, imbedded in mica-slate; also loose in the earth. Colour: dark red, sometimes purple.

Lapis-Lazuli.

Silica	...	...	49 0
Alumina	...	...	11·0
Lime	...	...	16 0
Soda	...	...	8 0
Oxide of Iron	...	...	4 0
Magnesia	...	...	2 0
Sulphuric Acid ...		...	2 0

Sp. Gr. 2 95. Hardness sufficient to scratch glass.

Found massive, but sometimes in rhombic dodecahedrons. Colour: pure azure.

Opal.

Combination of silica and water.

Silica	... ..	90 0
Water	... .	10 0

Sp Gr. 2 9. Hardness not sufficient to strike fire with steel.

Found massive imbedded in a decomposed porphyry and in trap-rocks. Colour, milky, but richly iridescent.

Peridot: Chrysolite.

Combination of magnesia, silica, and peroxide of iron.

Magnesia	. .	43 5
Silica	... .	39 0
Oxide of Iron	... ...	19 0

Sp. Gr 3 3—3 5. H.=6 5—7.

Primary form: a right prism, with rectangular bases; but occurs more frequently in rounded crystalline masses. Colour green, more or less mixed with yellow.

Sapphire: Ruby: Oriental Topaz.

Pure alumina, coloured from admixture with oxide of iron.

		Sapphire.	*Ruby.*
Alumina	...	98 5	90 0
Lime	...	0 5	0 0
Silica	...	0 0	7 0
Oxide of Iron	...	1 0	1 2

Sp Gr. 3 99. *Hardness only inferior to the diamond. Highly electric.*

Native form: six-sided prism variously terminated, but more frequently found in rolled masses. Colours: blue, blood-red, and yellow.

Spinel and Balais.

Combination of alumina and magnesia, coloured red by a minute admixture of chromic acid, or blue by the protoxide of iron.

		Red.	*Blue.*
Alumina	...	74 50	72·65
Magnesia	...	8·25	14·63
Silica	...	15·50	5·45
Lime	...	0·75	0·00
Protoxide of Iron	...	1·50	4·2

Sp. Gr. 3·5. H.=8.

Native form: the perfect octahedron, like the diamond, and similarly modified. Colour: Spinel, red, or slightly tinged with cinnamon; Balais, pale rose or lilac.

Topaz.

Combination of alumina, silica, and fluoric acid.

		Brazil.	*Saxony.*
Alumina	...	47·5	59 0
Silica	...	44·5	35 0
Fluoric Acid	...	7·0	5·0

Sp. Gr. 3·49 to 3·56. H.=8. Highly electric by friction.

Native form: prism with the sides deeply striated, and the ends very variously terminated. Colour: vinous yellow.

Turquoise.

Considered by Fischer to be only clay coloured by oxide of copper; but Jahn notices—

Alumina	... ...	73·0
Oxide of Copper	...	4·5
Oxide of Iron ...	...	4·0
Water	... ...	18·0

Sp. Gr. 2·8—3·0. H. 5 to 6.

Occurs in kidney-shaped masses, usually botryoidal, or mimillated. Colour: blue.

Zircon.

Combination of zirconia and silica.

		Jacinth.	*Jargoon.*
Zirconia	...	70 0	66·0
Silica	...	25·0	31·0
Oxide of Iron	...	0·5	2·0

Sp. Gr. 4·5 to 4·7. H. 7·5.

Primary form: rhomboidal octahedron, modified like the diamond, but all its angles set obliquely. Colour: orange, sometimes white.

The test of relative hardness is a very important one for ascertaining the species of precious stones, on account of the facility of its application. Its principle is the fact that the native crystal of any species will scratch all in the scale below itself. Thus the Diamond, standing highest (10.) scratches all the rest. The following is the received scale: 9. Corundum: Sapphire, Ruby; 8. Brazilian Topaz; 7. Rock-crystal; 6. Adularia; 5. Asparagus-stone; 4. Fluor Spar, &c.

The test of the relative specific gravity of the different species, a criterion upon which our modern mineralogists lay so much stress, and which they

claim as a discovery of their own, was well known and resorted to by the Persian jewellers six centuries ago, and if then, doubtless at a much earlier date.

Ben Mansur's notice of this point is so curious as to demand its insertion at length :—" Of the relations of certain precious stones to others. *Abu Rihan* pretends to have discovered by experiment that one *miscal* of the Blue Jacut stands in equal proportion with five *dank* and three *tissu* of the Red Jacut; with five *dank* and two and a half *tissu* of the Laal; with four *dank* minus one *tissu* of Coral; and with four *dank* minus two *tissu* of of the Onyx, or of the Crystal.

" The method used for the investigation of the weights and dimensions of gems is the following. They take a bowl filled with water, and throw the stones singly into the same. The quantity of water that through the immersion of each separate stone flows over the bowl occupies the space of the same. God knoweth best ! "

Note.—The *dank* in Egypt=3 carats, in Spain=2 It is the quarter or the sixth of a drachm. The *tissu*=4, or 2 grains of barley. The *miscal*=1½ drachm.

TABLE OF WEIGHTS AND PATTERNS

OF THE

LARGEST KNOWN DIAMONDS

AND

OTHER PRECIOUS STONES

"The King of Portugal's,' as large as a hen's egg, pea shaped, slightly concave on one side, co lour, deep yellow, and suspected of being a Topaz, uncut weight, 1680 car (Mawe)

"The Rajah of Mattan's," found at Laudak in 1787, uncut 367 car

"The Nizam's,' found at Golconda, uncut, 340 car

"*The Great Mogul's," found at Coulour, weight* in the rough, 787½ car cut as a rose, 280 car

"The Great Table," seen by Tavernier at Golcond in 1642 weight, 242½ car It was on sale for 5,00,000 rupees, he bade 4,00,000 for it in vain

"The Regent,' found at Puteal, in the rough, 410 car, cut as a brilliant, 136⅞ car

"The Orloff," Indian cut as a rose, 193 car It has a faint yellow tinge

"The Stär of the South," *found at the* Bogageni mine, Brazil, by a negress (1853) in the rough, 254½ car, cut as a brilliant, 124¼ car The stone has a *decided tinge, some say of rose, others, of* yellow

"The Koh i noor,' Indian cut, but retaining nearly its native weight, 186⅙ car, re cut (1862) as a brilliant, 102¼ car

"The Grand Duke of Tuscany," sometimes named "The Austrian"; cut as a double rose, 139½ car. Its colour is a decided yellow; and there is a tradition that the stone was bought for a trifle as a mere coloured crystal at a jeweller's in Florence.

"The Shah" (Russia), a long prism, retaining many of its native faces, 95 car. What greatly adds to its interest is a Persian inscription cut upon it. Bought of Chosroes, Abbas Mirza's youngest son.

"The Nassack" (the Marquis of Westminster's), captured from the Peishwah of the Mahrattas; Indian cut, 89¾ car., a pear-shaped stone, re-cut as a brilliant in London, 78⅝ car.

"The Pigott," 82¼ car., was disposed of by lottery in London (1801) for 30,000*l*. The present owner is not known.

"Mr. Dresden's Diamond," from Brazil (1860), heart-shaped, a shallow brilliant, 76½ car.

"The Empress Eugènie's," a brilliant, 51 car.

"The Pasha of Egypt's," a brilliant, 40 car.

"The Dutch," 36 car.

"Hope's Blue Diamond," suspected to be that of the French regalia (stolen in 1792), and then weighing 67 car., and afterwards re-cut as a brilliant to its present weight of 44⅛ car. This was probably at its origin the stone "d'un beau violet," weighing in the rough 112 3/16 car., but disadvantageously shaped, being flat and thin, brought

from India by Tavernier, and sold to Louis XIV in 1668

"The Polar Star," (Princess Yassopouff), a brilliant, 40 car

"The Treasury of Dresden's,' emerald green, 31¼ car

"Halphen's Rose coloured,' 22½ car

"Prince de la Riccia's," rose coloured, 15 car

"Paul I s,' ruby coloured, 10 car

"Tagore Brilliant, about 48 car

"Arundhatí"

&c, &c &c

Mawe also mentions as belonging to the Portuguese crown two other diamonds, rough, of great beauty, the one weighing 215 carats, the other, a little less Both were found in the river Abaytè, to the east of the district of Minas Geraes, by three men banished into the interior Besides these, he notices two nearly perfect octahedrons, of 134 and 120 carats each And to conclude, the State waistcoat of Joseph I had twenty buttons, each a single diamond worth 5 000 *l*

The largest known Emerald is the Devonshire, two inches in diameter, and of the finest colour *not cut* It came from the Muzo mine, Santa Fé di Bogota, and was purchased by the Duke *from* Don Pedro

The largest Sapphire has got its name, "The Wooden spoon seller s," from the occupation of the man who found it, in Bengal It is also called the "Ruspoli" after a former owner Lozenge shaped, with six faces, $132\frac{1}{16}$ carats It was bought by Perret, a Persian jeweller, for 170,000 francs (6,800 *l*) Now in the Musee de Minéralogie, which possesses another of rare beauty, measuring $2 \times 1\frac{1}{5}$ inches

The largest Pearl in the world is beyond all rivalry the "Hope," weighing 3 ounces, and 2 inches deep by $2\frac{1}{2}$ in circumference at the larger end It is pear shaped and of a dark opalized hue It is mounted for a pendant in a crown imperial of five vertical bars set with brilliants upon a lining of crimson enamel, with a gold border of emeralds, sapphires, and rubies

The largest Cat s eye (also the "Hope') is hemi spherical, $1\frac{1}{2}$ inches in diameter, and formerly was the great pride of the King of Candy, from whom it was captured in 1815 It has been celebrated for many ages, and appears to be the one mentioned by Ribeiro in his "History of Ceylon," as at that time (16th century) belonging to the Prince of Ura It is mounted in massy pure gold, set with cabochon rubies in the Oriental manner

The largest Ruby ever seen in Europe is that presented by Gustavus III of Sweden to the Czarina, upon his visit to her in 1777 It is equal in

bulk to a small hen's egg, and is of fine colour This was the size of Rudolf II's, already quoted, and therefore must weigh at least 100 carats The highest weight of those seen in India by Tavernier did not exceed 50 carats None in the French Regalia weighed above 8$\frac{1}{16}$ carats

---

General Remarks upon the term "Carat"

The word Carat is *probably derived from the name of a bean, the fruit of a species of Erythina, which grows in Africa The tree which yields this fruit is called by the natives* "Kuara" (sun), and *both blossom and fruit are of a golden color.* The bean or *fruit, when dried, is nearly always of the* same weight, and thus in very remote times it was used in Schangallas, the chief market of Africa, as a standard of weight for gold The beans were afterwards imported into India, and were there used for weighing the Diamond

The Carat is not of the same weight in all countries, for instance —

One Carat in England is equal to		.	20,54,000	milligrams
,,	France	,,	20,55,000	,,
,,	Vienna	,,	20,61,300	,,
,,	Berlin	,,	20,54,400	,,
,,	Frankfort-on Maine		20,57,700	,,
,,	Leipzig	,,	20,50,000	,,
,,	Amsterdam	,,	20,57,000	,,
,,	Lisbon	,,	20,57,500	,,

One Carat in Leghorn is equal to	...	21,59,900	milligrams.
,, Florence ,,	...	19,52,000	,,
,, Spain ,,	...	20,53,930	,,
,, Borneo ,,	...	10,50,000	,,
,, Madras ,,	...	20,73,533	,,

72	carats make	...	.. One Cologne oz.
151½	,,	...	.. ,, English ,,

The ounce's weight is used for weighing small and Baroques Pearls, Coral, Peridots, and rough Garnets.

TABLE

TABLE OF THE DISTINGUISHING

Name and Colour	Lustre	Spec fic Gravity	Hardness.	No in Scale of Hard ness	Composition	System of Crystallization

RAJAH RAJENDRA MULLICK'S COLLECTION

OF

ROUGH STONES

RAJAH Rajendra Mullick Bahadoor, of Calcutta, has long been known for his love of jewels and marbles, of which he owns a large collection He has caused his dwelling-house to be decorated with marble and mosaics, on an extensive scale The following is a list of some of the varieties of rough stones which he had been good enough to send me for inspection, and which I have had tested and identified by four of the foremost jewellers of this city —

1 Godanta *
2 Sonelá
3 Lasuniá †
4 Páy Zuhur
5 Sung Gudri
6 Dhonelá
7 Sung Hadid ‡
8 Dahun Firung
9 Bilor
10 Kathelá
11 Lájburud
12 Kánchá Gori
13 Puccá Bilor
14 Sung Simák
15 Gori
16 Kánchá Bilor
17 Pitoniá
18 Sung Rattak
19 Sohánmakhí
And various others

* Like a duck's egg in size and appearance—a size rarely to be met with An excellent specimen

† Of the new mines

‡ This stone is sometimes engraved upon with the name of the Almighty and worn on the neck

THE RING OF STRENGTH.

"LET a ring be formed of virgin gold on the day[a] of the sun, and in the hour[b] of Jupiter, in the moon's increase,[c] wherein thou shalt place seven precious stones,—the Diamond, the Ruby, the Emerald, the Jacynth, the Sapphire, the Beryl, and the Topaz. Wear it about thee, and fear no man; for thou wilt be as invincible as Achilles."—*MSS. of Philadelphus*

From " The Temple of Urania,"

BY

M. NOSTRADAMUS.

---

a *Sunday* b 11 to 12, and 6 to 7 in the day.
c From the second day of the new moon to the time of the full.

(5)

गोमेदनामानि ।

Sanscrit Synonyms for the term "Zircon."

1 गोमेदः Gomedah.
2 गोमेदकः Gomedakah.
3 राहुरत्नम् Ráhuratnam.
4 तमोमणिः Tamomaṇih.
5 स्वर्भानवः Svarbhánavah.
6 पिङ्गस्फटिकः Pingasphatikah.

(6)

विद्रुमनामानि ।

Sanscrit Synonyms for the term "Coral."

1 विद्रुमः Vidrumah.
2 प्रवालः Praválah.
3 अङ्गारकमणि Angárakamaṇih
4 अम्भोधिवल्लभः Ambhodhi-ballabhah
5 भौमरत्नम् Bhaumaratnam
6 रक्ताङ्गः Raktángah
7 रक्ताकारः Raktákárah.
8 लतामणिः Latámaṇih.

(7)

मरकतनामानि ।

Sanskrit Synonyms for the term "Emerald"

1 मरकतम् Marakatam.
2 गारुत्मतम् Gárutmatam.
3 अश्मगर्भम् As'magarbham.
4 हरिन्मणिः Harinmaṇih.
5 मरक्तम् Maraktam.
6 राजनीलम् Rájanílam.
7 गरुडाङ्कितम् Garuránkitam.
8 सौपर्णम् Sauparṇam.
9 रौहिणेयम् Rauhiṇeyam.
10 गरुडोद्गीर्णम् Garurodgírṇam वा गरुडोत्तीर्णम्, or Garurottirṇam.
11 अश्मगर्भजम् As'magarbhajam.
12 गरलारि Garalárih.
13 वापवोलम् Bápabolam वा वापप्रालम् or Báprabálam.
14 बुधरत्नम् Budharatnam.
15 गारुड़म् Gáruram.

(8)

पुष्परागनामानि ।

Sanscrit Synonyms for the term "Topaz."

1 पुष्परागः Pushparágah.
2 मञ्जुमणिः Manjumaṇih.

3 वाचस्पतिवल्लभः Vácbaspati-ballabhah.

4 पीतः Pítah.

5 पीतस्फटिकम् Pítasphatikam

6 पीतरक्तः Pítaraktah.

7 पीताश्म Pitás'ma.

8 गुरुरत्नम् Gururatnam.

9 पीतमणिः Pítamanih.

10 पुष्पराजः Pushparájah.

---

(9)

नीलनामानि ।

Sanscrit Synonyms for the term "Sapphire."

1 नीलः Nílah.

2 सौरिरत्नम् Sauriratnam.

3 नीलाश्मा Nílás'má.

4 नीलोत्पलः Nílotpalah.

5 तृणग्राही Trinagráhí.

6 महानीलः Mahánílah.

7 सुनीलकः Sunílakah.

THE OCCULT POWERS OF GEMS AND PRECIOUS STONES.

IN the previous general remarks on each kind of precious stone, the beliefs of nations and individuals as regards the marvellous and medicinal properties of those precious stones have been given. To the scientist as well as to the generality of men such beliefs will no doubt appear superstitious, childish and laughable. But such beliefs still continue, and there have been men of erudition—philosophers and sages, in every age and in every country, who have not thought it beneath them to make this the subject of their ardent researches, and who have left behind them the written record of their experiences. Nowhere more than in India, the land, *par excellence,* of occultism and spiritism, has the research after the occult virtues of precious stones been pursued, and if all the knowledge and experience gained by *munis* and *rishis, yogees* and *siddhis,* had been preserved and handed down to the present generation, what an insight would have been obtained into the hidden arcana of Nature, and into what beneficent use such knowledge and experience could have been turned!

Modern western spiritualists have endeavoured to discover, in the present day, what was so well known in ancient times, about the hidden virtues of gems. Apart from their medicinal properties, it has

been ascertained that certain gems facilitate the *rapport* of certain classes of spirits with the owners of those gems. Monsr. Cahagnet, the well-known magnetist, obtained from his celebrated clairvoyant Adèle certain interesting information on this subject.* He thought of studying the question thoroughly, and with that view he addressed himself to the spirit of Emmanuel Swedenborg, through the assistance of Adèle, when in magnetic sleep. He sought for light from Swedenborg, because the Swedish mystic was the most learned mineralogist of his time, and perhaps of our time as well. If his revelations, says M. Cahagnet, are not more precise than those of the ancients, they have at least the quality of novelty. He wished to know the truth, if that was possible in this life, and he therefore thought that any means to attain that object should not be thrown away. The following are the revelations of Swedenborg on this subject :—

Q. Can you give me some information on the spiritual and material powers of certain precious stones, and tell me whether they really possess the property of putting material man *en rapport* with spirits who have been freed from matter, or of facilitating such *rapport*, and also of curing or preventing certain diseases ?

A. I shall do my best. Question me.

* Magie Magnetique, Par L. A. Cahagnet.—Paris, 1838.

Q. What are the spiritual virtues of white Diamond? (You know that there are Diamonds of various colors,—yellow, red, violet, black? &c.)
A. This gem is beloved by the Spirits of Light, and consequently puts one *en rapport* with them, by illumining the intelligence of those who wear it for this purpose.

Q. What do you think are its physical virtues?

A. I have already told you: it has influence over the intelligence, that is, it purifies the brains.

Q. What are the spiritual properties of the Ruby?

A. This color is loved by spirits who are ardent in study, desiring to know much. The Ruby influences in this way him who wears it.

Q. And physically, what are its properties?

A. It has influence on the blood.

Q. What are the spiritual properties of Emerald?

A. It is sought after by lucid spirits, and it places one *en rapport* with them.

Q. What is the physical power of the Emerald?

A. The same as its spiritual powers: it illumines, clears and strengthens the globe of the material eye.

Q. What is the spiritual power of the Sapphire?

A. This gem puts one in communication with the spirits of many societies, fond of different studies, but united in one society.

Q. What is its physical virtue?

A. It strengthens the nervous fluid.

Q. What do you think of the spiritual power of the Amethyst?

A. The spirits who love this gem are less elevated and less advanced than the others. It puts one in communication with them.

Q. What are its physical virtues?

A. It has much influence on enlargements of the spleen.

Q. What are the spiritual qualities of the Topaz?

A. The wandering spirits in the sulphurous atmosphere of the earth are fond of it. It puts one in communication with them.

Q. What are its physical properties?

A. It is applicable in cases of uneasiness occasioned by bile.

Q. Do you attribute any spiritual powers to the Coral?

A. It has those of the Ruby and agrees with heated blood, and also with those who have florid faces.

Q. What is the spiritual property of the Opal?

A. It is regarded with affection by the spirits of Peace and Quiet.

Q. What are its physical virtues?

A. It is beneficial in cases of sleeplessness and of too light sleep.

Q. Has the Cornelian any spiritual power?

A. It has but little concern with spirits.

Q Has it any physical virtues?

A I have already said that it has several, according to its colors The pure white is good for eye diseases, that is, for growing cataract The pale red agrees with a feeble state of the blood The deep red with the heart, with heated blood and liver diseases Those with specks of deep red and crimson are good for diseases of the spleen

It must be understood that, to be really efficacious, these gems should be pure, and should be worn on the ring finger of the left hand, this finger being preferred to others in consequence of its ramifications with the heart, which is the seat of life The spirit of Swedenborg likewise affirms that the medicinal influence of precious stones, physically, is perceived when those stones are in constant contact with the body, and not when disconnected with it Such a ring, set with the several kinds of stones whose virtues are desired to be felt, cannot but be more powerful than a ring of a single stone

It has further been affirmed that silver is the best setting for Emerald, as, like the latter, silver is much liked by spirits of light

It should be remembered, however, that in this, as in every other thing, there are conditions to be observed This should not be forgotten. Twenty individuals may, at the same time, be in possession of the portrait of a handsome woman, but it does

not follow that the woman will love all the twenty possessors of her portrait In the same way a lapidary may possess twenty kinds of precious stones, each having contrary influences, but the lapidary receives no benefit therefrom, except from selling them as high as he can That kind of love, and, shall I say, worship, which the possessor of such a stone should have for it, as a medium of communication with the spiritual world, is far from his mind He who regards it as the receptacle of his affections and who confides to it his griefs, appealing to it, by its correspondence with the spirits who love it, in order to obtain aid and protection from them, will find himself in a condition in which he can hope for something

An idea of the researches and opinion of those who have treated on this subject will be obtained from the following notes from the "Magic" of J B Porta The *precious stones have here been* classified alphabetically and not according to their value —

Agate—Strengthens the heart Prophylactic against plague, and cures the bites of venomous animals

Amethyst—Neutralises magic incantations

Cornelian—Ensures victory

Chrysolite—Induces a man to repent of the faults committed by him

Chrysoprasus—Strengthens the sight, enlivens the spirit, and makes a man feel free and joyous

Coral—Arrests blood, keeps off evil spirits. According to Marsile Ficin it removes panics and protects from thunder and hail.

Crapandine—Which is found in the head of toads, is good for the purposes of witchcraft.

Diamond—Contends against sleeplessness, spells and enchantments. It calms anger.

Elossite—Soothes headaches.

Emerald—Cures epilepsy. In powder it arrests dysentery and cures wounds by venomous animals.

Galachide—Blackish stone. Secures from flies and insects. Put into the mouth, it discovers the secrets of others.

Gedi—Brings on changes in the atmosphere. Brings rain, wind and clouds. No one sees this stone now.

Heliotrope—Stone unknown in our days. It is said that it could render one invisible.

Hyascinthe—If suspended from the neck, it keeps off plague and thunder, strengthens the heart and increases riches and honors.

Jade—Alleviates pain of the kidneys. Expels gravels from the bladder, and, when worn as a charm, is a preservative against venomous animals.

Opal—Stimulates the heart, preserves from malaria and contagion in the air, drives away

despondency, prevents fainting, heart diseases and malignant affections

Penthe—Yellow stone Cures gout

Jamenius Lapis—Prevents miscarriage

Siracite—Fabulous stone Facilitates digestion

Syrrochite—Precious stone, to which Pliny attributes the power of retaining spirits evoked

Eagle stone—Which is found in the nest of eagles, discovers thiefs and accelerates child-birth

While on this subject, it will not be out of place to give the following extract from that valuable and really wonderful work entitled "Art Magic, or Mundane, Submundane and Super mundane Spiritism" Edited by Emma Hardinge Britten

"The splendid array of experiments by which Baron Von Reichenbach has, within the last half century and under the most stringent test conditions, proved that magnetic emanations streamed from shells, stones and crystals displaying different degrees of force and different shades and color, form and radiance, supplement the opinions of the most authoritative writers of different ages on the same subject

"That all metals and crystalline bodies give off magnetic force, is now proved beyond question, that they are capable of producing somnambulic or ecstatic effects in different degrees, Von Reichen bach s experiments, with over a hundred and fifty

sensitives, have abundantly demonstrated, hence we may be justified in regarding with some interest the classification of the different qualities of minerals and precious stones, put forth by Rabbi Benoni, a learned writer of the fourteenth century, said to be one of the most profound Alchemists of his time, who alleges that 'the loadstone, sapphire and diamond are all capable of producing somnambalism, and when combined into a talisman, attract such powerful planetary spirits, as render the bearer almost invincible' All precious stones, when cut with smooth surfaces and intently gazed upon, are capable of producing somnambulism in the same degree as the crystal, also of inducing visions

"Their varieties of color prove that they absorb different degrees of light, and they are said to impart unequal degrees of heat The Buddhists esteemed the sapphire above all gems, claiming that it produces tranquillity of mind, and when worn by one wholly pure and devoted to God, ensures protection against disease, danger, and venomous reptiles

"Orpheus exalts the virtues of the loadstone almost as highly as did Paracelsus that of the magnet The former says 'With this stone you can hear the voices of the gods, and learn heavenly things

"'It will confer strength, banish disease, and, when worn constantly about the person, ward off

epidemics and plagues Sitting down before it and fixing your gaze earnestly upon it, you have but to ask of the gods for light on any subject, and the answer will come breathed out through the stone Your soul will hear it, and your senses will discover it clearly' Orpheus says of stones in general 'The earth produces every good and evil to man, but she also provides a remedy for every ill These are to be found chiefly in stones Every virtue is hidden within them'

"Benoni affirms that the diamond will deprive the loadstone of its virtue, and is the most powerful of all stones to promote spiritual ecstasy Amongst a variety of similar aphorisms he says 'The Agate quenches thirst if held in the mouth, and soothes fever

'The Amethyst banishes the desire for drink, and promotes chastity

'The Garnet preserves health and joy

'The Sapphire impels to all good things like the diamond

'The red Coral is a cure for indigestion, when worn constantly about the person

'Amber is a cure for sore throat and glandular swellings

'The Crystal promotes sweet sleep and good dreams

'The Emerald promotes friendship and constancy of mind

'The Onyx is a demon imprisoned in stone, who wakes only of a night, causing terror and disturbance to sleepers who wear it.

'The Opal is fatal to love, and sows discord between the giver and receiver.

'The Topaz is favorable for all hœmorrhages, and imparts strength and good digestion.'

"We give these quaint aphorisms not as guides or scientific indications, but to show the ideas which the latent powers of magnetic bodies suggested to observers of natural forces."

It is sincerely to be hoped that, as science and philosophy march hand in hand towards sublime development, things which were known to our forefathers and to the wise of ancient times, and which lie buried within the ponderous debris of ignorance, bigotry and unbelief, will gradually be brought to light, and that, along with other wonders, the hidden properties of precious stones will be made clear, as the hidden powers of light and electricity have been made clear to the students of modern science and to the world.

CONCLUDING REMARKS.

I BEG of my readers to bear up with me yet awhile, and to pardon me, if, before bringing to a conclusion my self-imposed task, I take them back to the days when I was but a little child. The memories of bye-gone times are crowding thick upon me, and through the long vista of departed years I can see myself sitting on the lap of my gentle mother, while she amused me by trying to impress on my mind the names of different kinds of precious stones. It was thus that my love for, and knowledge of, gems grew apace. Perhaps the narration will seem dry to my readers, but to me the remembrance of those innocent days is full of pleasantness, and I would, therefore, again beg them to bear up with me yet awhile. I remember I was six or seven years old, when my revered mother used to gladden my boyish heart with presents of finger-rings, set with jewels of no great value. She taught me the name of each gem. "This yellow stone," she would tell me, "is Pukhráj" (Topaz); "that piece of red stone is a *Mánik* (Ruby)—*Mánik*, the wealth of seven kings." "This is called a Cat's-eye," and so on. I was somehow inordinately fond of the Topaz and the Cat's-eye, and would stop crying when I got them. These two rings, I may mention in passing, are still in my possession, and have been very carefully preserved. My mother understands the identification of precious stones thoroughly, and as she

is also well educated in other respects, I had an intelligent and experienced teacher in such matters. She is in about the 74th year of her age, and her eyes are not now what they were. She can, however, give a very correct opinion on the genuineness or otherwise of a stone, and accurately judge of its qualities, as soon as it is placed in her hands.

From her too I learnt to be cautious when purchasing jewelry. I remember that, in order to guard me against being imposed upon by dealers of precious stones, she would frequently remind me of the trick which a certain Jewish jewel-merchant had played upon my uncle, the late Baboo Soorjee Coomar Tagore, by palming upon him, at a very high price, two bits of colored glass ingeniously pasted together, and made to appear exactly like Emerald. Having this wholesome lesson in my mind, I am careful in deciding upon the merits of gems and precious stones which are brought to me for sale or opinion, and I would advise every one to do the same.

About 30 years ago, the time when I had been taking my first lessons in jewelry from my respected mother, the rage for gems and precious stones was high among the aristocracy of Calcutta. In those days the native nobility used to invest a goodly portion of their income in valuable jewels.*

* In former years jewelled *Kundalas* (ear rings), *Kunthás* (necklaces), *Bijus* (armlets), *Bilas* (bangles), pearl chains and *Seerpaiches* (aigrettes) used extensively to be worn by the nobility and wealthy gentlemen of Bengal as well

Jewellers came to the metropolis in larger numbers from the North-Western Provinces of India, with splendid assortments of gems and precious stones, and found profitable market for them here. Their constant attendance on the wealthy gentlemen of the town brought about a sort of intimacy between them and their noble customers, and the latter had thus ample oppoi tunities of learning a great deal about jewels and their qualities. A respectable jeweller, in the olden times, was considered fit company, and the brilliant gatherings in the *bytuckhanas* of native noblemen always counted one or two of the trade among those present. By constant association with them, some of the leading members of the native nobility became pe rfect connoisseurs of gems and jewels. Among these may be mentioned the names of the late Rajahs Baidyanath Roy and Kally Kisson Deb Bahadoor, the late Baboos Kassinath Mullick, Birnursing Mullick and Sibnarain Ghose, the late Coomar Kally Kissen Roy, and Baboo Sreenarain Bysack. My much revered father, the late Baboo Hurro Coomar Tagore, was also a good judge of jewels, and he, likewise, took pains to initiate me into their mysteries, when I was a little further advanced in age.

Such is not the fashion now in this province, as of other parts of India. where only bridegrooms are seen to wear the above mentioned ornaments over their magnificent dresses. The *Serpaich*, which generally forms an item in the *Khilats* presented to the titled nobility of the land by Government, is still used by them on the occasion of State ceremonies. Finger-rings, attar-dáns, pán-dáns, flower-vases, scabbards and handles of swords, &c, set with precious stones, continue to be used by the rich Jewelled watch-chains and studs, however, are more in vogue now than in former days The ornaments used by native ladies of rank have undergone very little change.

Prem Chand Jahari and Purun Chand Jahari, two of the highest authorities of that time in the matter of jewelry, were in constant attendance on him My respected brother, the Hon ble Maharajah Joteendro Mohun Tagore, C S I, has considerably helped me in improving my knowledge A piece of Sapphire possessed, apparently, of all the requisite qualities of a perfect stone of that description, was once brought for sale to my uncle, the late Baboo Gopal Lal Tagore, by a Cingalese merchant Baboo Gopal Lal, who had great faith in the knowledge of jewelry possessed by my respected brother, had this Sapphire sent to him for inspection and opinion To the surprise of all, my brother at once pronounced the stone to be a counterfeit one, and corroborated his bold verdict by satisfactory practical proofs

With the growth of age, my taste for gems took a wider sphere, and I began to feel the want of written works, which gave definite accounts of precious stones, the mode of testing them, the way to find out their defects and imperfections, and such other matters as could materially help one in attaining a pretty correct knowledge of the "science" of jewelry I hunted for Sanscrit books devoted exclusively to the subject of precious stones, and hunted for a good long time in vain Some time after, I came across a work entitled the "*Ratnaparîkshâ*," which I procured from the Library of the Asiatic Society, Calcutta This book, though written in

Sanscrit, had notes attached to it in the Cingalese language, and these notes, therefore, came to be of very little practical use to me About this time, Baboo Jahar Lal Jahari (jeweller), of Calcutta, gave me much information on the subject But I was curious to know something of what European jewellers have written about precious stones, and had to procure from England the works extant on this subject, there being none available here at the period With the help of Baboo Jahar Lal Mokeem, my knowledge about jewels increased It gave me much pleasure to compare the views enunciated in the English works with those of modern jewellers, and it was, at this time, that the idea of compiling a book, which I had entertained in my mind from a very early period of my life commenced to assume a definite shape The *Puranas* and the medical and astrological works of the Hindus have thrown a flood of light on the subject, and it became my earnest endeavour to profit by it The Persian and Arabic works on jewelry that were in my possession helped me to a material extent in obtaining an insight into the views of the Mahomedan authorities The materials now in hand having been considered sufficient to start a work with, I employed myself in putting them together with a view to publication Fresh light, important as well as interesting, began to pour in from all sides, and I eagerly took advantage of the new materials thus furnished to me Latterly,

Babu Giridhari Lal, a well known jeweller, at present of Calcutta, assisted me in giving anything like a definite shape to the crude views of modern jewellers, that have been traditionally handed down from generation to generation I have succeeded in collecting the names by which the people of Burmah, China, Nepaul, Afghanisthan, and some other oriental countries, designate some of the principal jewels, and have inserted them in the body of the work, along with other information, obtained personally from them, on the jewels in use in their respective countries

I am grateful also to Mr Caithness, of the firm of Messrs Cooke and Kelvey, jewel merchants of Calcutta, and to several native jewellers, for the identification of many of the stones and for general help

Through the kind help of my esteemed friend, Mr O C Dutt, I have been able to add a new feature to my work, namely, an account of the occult powers of gems from a spiritualist's point of view My grateful acknowledgments are due to him for the translation from the French and certain other extracts furnished to me

My acknowledgments are also due to the authors and compilers of the several works, to the editors of magazines and newspapers which I have had to consult while engaged in getting up this work, and from which I have sometimes given copious extracts and reproduced illustrations I have

already given a list of all the works which have supplied me with materials for the present compilation, and I take this opportunity of expressing the sense of my gratefulness to any gentleman, professional or amateur, and to the compiler of any work, or the editor of any journal or newspaper,—not enumerated in the list given,—from whom I have received help in connection with the present work.

It only remains for me to express a hope that this work, which I have attempted my best to render useful to those for whom it is intended, will be of *practical* help to them, in testing, valuing and identifying precious stones, and other jewels, and ascertaining various important facts regarding them. I trust also that it will be found quaintly-interesting and curious by the general reader.

"बहून् दोषानपि त्यक्त्वा स्वल्पे च गुणे ग्रहम्।
सम्भावयन्तु सन्तो मां शिरस्येष कृतोऽञ्जलिः॥"

—And, if among numerous short-comings, the learned find even some *merit* (in the work), may I find favor in their eyes for the same,—is the prayer I prefer with my hand upon my head.—

THE END.
